TweakBit
PCSpeedUp

User Manual

Table of Contents

This is your guide to one of the most comprehensive sets of tools for solving a wide range of speed issues any PC is prone to acquire through normal use.
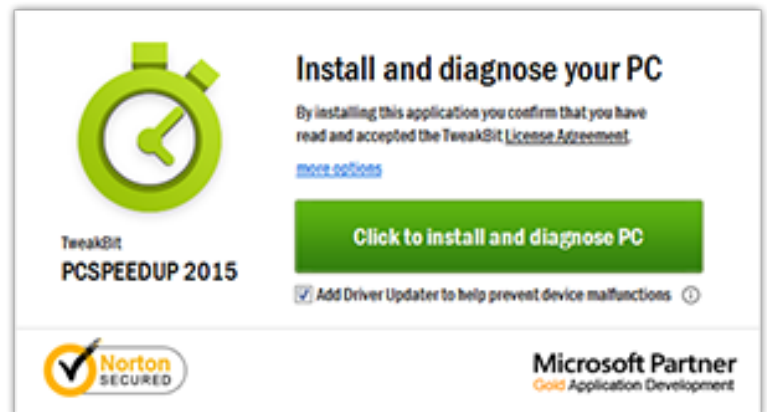

Installing TweakBit PCSpeedUp

Before installation, please make sure your computer meets the following minimum system requirements:

- Windows 10, 8 (32 or 64 bit), Win 7 (32 or 64 bit), Vista SP2 (32 bit only), XP SP3 (32 bit only)
- 50 MB of available disk space
- 512 MB RAM

The installation process is very straightforward and won't take more than a minute to finish.

To start installation, please press the *'Click to Install and Diagnose PC'* button. Before you do that, you can also check additional installation options by clicking on *'more options'*.
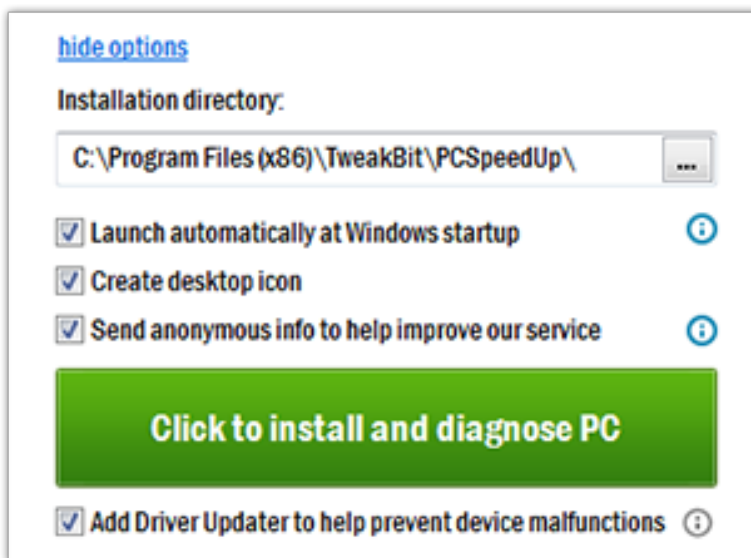

The program will launch automatically when installation completes.
Start a full system scan immediately by clicking on *'Start Your PC Scan'*.

While scanning, TweakBit PCSpeedUp looks for issues responsible for system slowdown. They are split into four basic categories.

- **System Registry Issues.** The registry stores all essential settings required for your PC to run smoothly. However, over time it tends to accumulate invalid entries likely to affect performance and lead to sudden stalls and crashes.

- **Shutdown Speed Issues.** Certain settings may cause your computer to take longer to shut down by extending the time it takes applications or processes to terminate.

- **Internet Speed Issues.** If some of your network settings are misconfigured, they may interfere with the speed and quality of your connection.

- **Windows Speed Issues.** Some services that are active by default may needlessly waste computer resources and are recommended to be disabled for better performance

The scan results will be displayed under the Diagnostics tab. You will be able to review them in detail by clicking the *'Detailed list'* link next to each category. This will let you uncheck any items you may not want to be deleted or items you are not sure about and want to research further. Once done reviewing the details, click the *'Fix all issues'* button to complete repair.

Besides the Overview and the Diagnostics tabs, the main program window has several other tabs that help the user easily navigate the program.
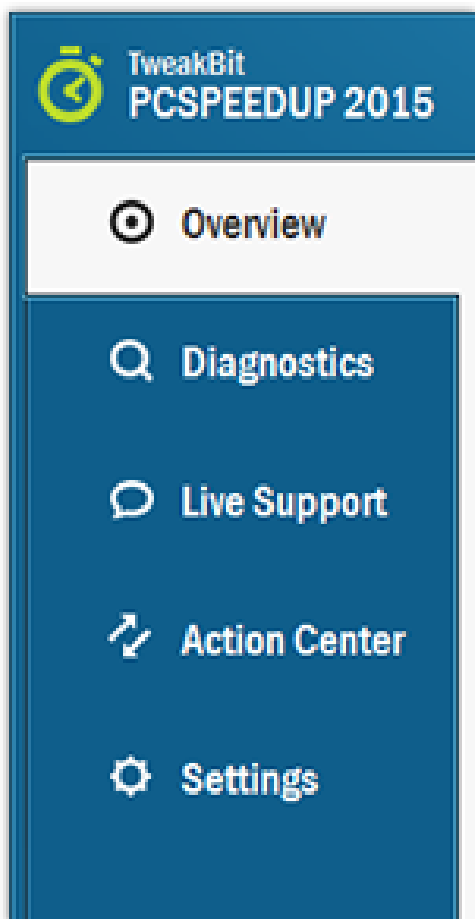

Live Support

The Live Support tab lets you get live assistance with any issues you may have with the program, as well as with any other problems your PC may be facing. This includes virus infections, connectivity issues and so on. Assistance with the licensed version of PCSpeedUp is free of charge.

Action Center

The Action Center tab lists recommendations for additional software programs to install for a greater effect on performance and a better user experience. You may install any of the recommended programs at a click of a button.

Settings

The Settings tab lets you configure program behavior and set up automatic maintenance tasks to keep your computer running fast and stable on a permanent basis.

You will need to register your product to unlock full functionality.
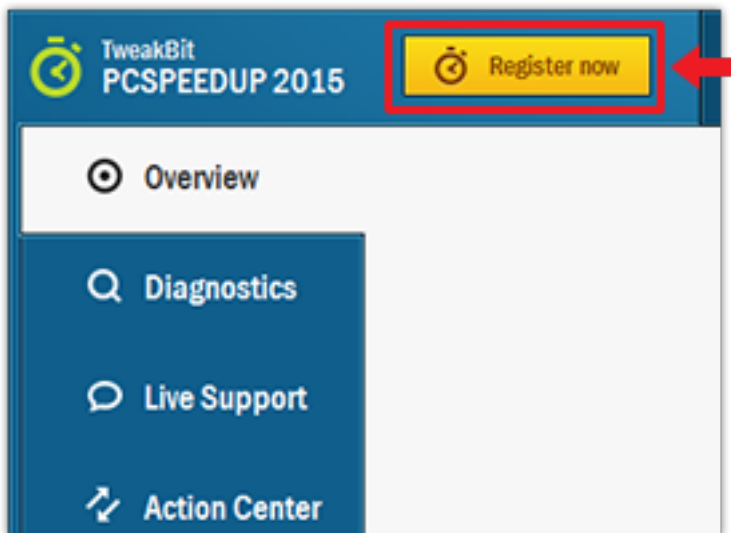

After purchase, you will receive an email with your license code.

- Click on **'Register now'** at the top of the main program window. A pop-up will prompt you to enter your license code.

- Find the license code that was sent to you in your order confirmation email.

- Copy and paste* it directly into the registration field.

- Once the license code has been entered, click **'Register'**. You will receive a confirmation that the application has been successfully activated.
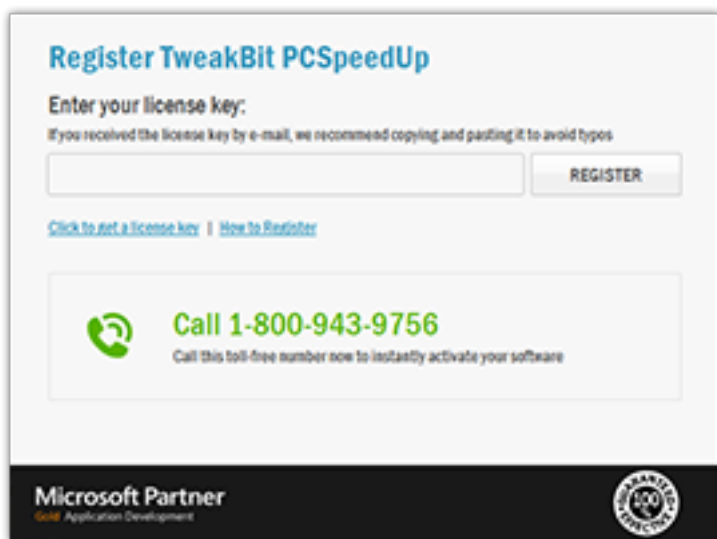

* To copy and paste:

Highlight the license code by clicking the left mouse button in front of it and then dragging it to the right, until you have covered all of it.

When done, right-click on the highlighted area and select **'Copy'.**

Go back to TweakBit PCSpeedUp. Now you will need to right-click inside the registration field and choose **'Paste'.**
