# SOLID ROCKET PROPULSION TECHNOLOGY

Edited by

**Alain Davenas**

*ancien élève de l'Ecole Polytechnique  
Technology and Research Director, SNPE, France*

**PERGAMON PRESS**

OXFORD · NEW YORK · SEOUL · TOKYO

# Contents

## *Foreword*

xi

ALAIN DAVENAS

## *Note on International Nomenclature for Solid Propellant Compositions*

xv

## **1. Propulsion Elements for Solid Rocket Motors**

**1**

ROLAND LUCAS

1. Principles of propulsion

1

2. Fundamental equations of internal ballistics

10

3. Rocket motor thrust

15

4. Specific impulse

19

5. A special case: ramjets and ramrockets

26

Bibliography

32

## **2. Solid Propellant Grain Design**

**35**

BERNARD ZELLER

1. Introduction

35

2. Description of grain geometries and associated propellants

37

3. Solid propellant grain requirements

46

4. Ballistic and structural grain design methods

51

5. Propellant grain reliability

75

6. Special cases

78

Bibliography

84

### 3. Prediction and Measurement of Specific Impulse

JEAN-PAUL BAC

85

1. Introduction 85
2. Physical model 86
3. Predictions 95
4. Measurement of the specific impulse 97
5. Solid fuels for air-breathing systems 106

Bibliography 109

### 4. Solid Propellant Combustion and Internal Ballistics of Motors

BERNADETTE GOSSANT

111

1. Introduction 111
2. Solid propellant combustion 111
3. Steady-state combustion in a solid propellant rocket motor 132
4. Transient and unsteady burning phenomena 164

Bibliography 188

### 5. Plume, Signal Interference and Plume Signature

GERARD PRIGENT

193

1. Introduction 193
2. Description of the flow exiting from a nozzle 194
3. Description of the methods used to measure the characteristics of the plume and smoke 200
4. Description of the methods of analysis 203
5. Influence of propellant formulation on transparency and low signature 209

Bibliography 212

### 6. Structural Analysis of Propellant Grains

BERNARD GONDOUIN

215

1. Introduction 215
2. Description of the mechanical loads 218
3. Some generalities and definitions 225
4. Structural properties of propellants and their bonding 237
5. Determination of the induced stress-strain 270
6. Determination of the factor of safety 287
7. Propellant behavior under dynamic loads 297
8. Conclusion and future prospects 300

Bibliography 301

### 7. Safety Characteristics of Solid Propellants and Hazards of Solid Rocket Motors

JACQUES BRUNET

303

1. Introduction 303
2. Overview of solid propellant rocket motor hazards 303
3. Pyrotechnic behavior of solid propellants 304
4. Assessment of the risks presented by propellant grains 320

Bibliography 326

### 8. The Main Families and Use of Solid Propellants

ALAIN DAVENAS

329

1. Background 329
2. Utilization in the propulsion stages for missiles or space launchers 331
3. Additional propulsion for artillery 349

4. Gas generators and their various applications	351
5. Pyrotechnic compounds and propellants for ignition systems	354
6. Laboratory to industrial production: development programs, service life, research programs	360
Bibliography	366
<b>9. Double-base Propellants</b>	<b>369</b>
HERVÉ AUSTRUY	
1. Introduction	369
2. Compositions and raw materials	370
3. The manufacturing process	377
4. Characteristics of double-base propellants	391
5. Operating characteristics	399
6. Chemical stability	404
7. Aging	408
8. Safety characteristics	409
Bibliography	412
<b>10. Composite Propellants</b>	<b>415</b>
ALAIN DAVENAS	
1. Introduction	415
2. Formulation of composite propellants	416
3. Manufacturing and quality control methods	439
4. Properties of composite propellants	460
Bibliography	474

<b>11. Advanced Energetic Binder Propellants</b>	<b>477</b>
RENÉ COUTURIER	
1. Background	477
2. Raw materials	478
3. Manufacturing processes	489
4. Characterization of advanced energetic binder propellants	497
Bibliography	523
<b>12. Propellants for Integral Rocket Ramjet Systems</b>	<b>525</b>
CHRISTIAN PERUT	
1. Introduction	525
2. Fuel-rich solid propellants	529
3. Boosters for integral rocket ramjets	549
Bibliography	551
<b>13. Thermal Insulations, Liners and Inhibitors</b>	<b>553</b>
JEAN-MICHEL TAUZIA	
1. Inhibiting materials and thermal insulation in solid propulsion	553
2. Background	554
3. Processing insulating materials	566
4. Examples of insulating materials used in rocket propulsion	570
5. Conclusion	581
Bibliography	582
<b>14. Future of Solid Rocket Propulsion</b>	<b>585</b>
ALAIN DAVENAS	
1. Increase of solid propellant energy	585

2. Propulsion of strategic missiles	588
3. Propellants for tactical missiles	590
4. Propulsion of shells	597
5. Space launchers and space motors	597
Conclusions	601
Bibliography	601
Index	603
