MyCV

Introduction

The main idea of my project is mine web CV page, which I will can send to HR. It should be pleasant for eye and should demonstrate my skills in web development. People, whom will open my site, should have opportunity to look information about me and send message to me. It will give me chance to find a new job, and for company it will be opportunity to get qualified worker.

Expected List of Features

- Form for sending messages to me, links of mine social network accounts and mine contacts – HR will can have opportunity to get link with me.
- List of my projects, history of my last job places – it will let employers get acquainted with my skills and work experience.
- All info about me should loading from MongoDB for easily update web page.

Market Survey

In internet we can found many single-page websites at this theme. I introduce some examples here:

- https://marty.com/ - Impressive feature with timeline and animations. Interesting design of carousel.
- https://gruev.space/ - Used 3D functional in web development. A lot of animations.
- https://andris.gauracs.com/ - In my opinion, so good variant of CV. There are many informative blocks which is gradually appearing, when you scroll down page.
- https://diogotc.com/ - Another one example. The same as previous.
