OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the forecast owner.</p>
PeriodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Period ID for the adjustment. Read only.</p>
ProductFamily	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The Product Family for the adjustment. Read only. This field is available in API version 29 and later.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.</p>
Territory2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the territory to forecast on. Available in API version 43 and later.</p>

## Usage

Use this object to obtain a manager's adjustment detail for a specified `ForecastingItem`. The `ForecastingAdjustment` object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write `ForecastingAdjustment` records.

-  **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

## ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
<code>DisplayPosition</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, idLookup, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The order in which product families are displayed on the forecasts page. Each value is unique to a product family.</p>
ProductFamily	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The product family available to forecast on. Each product family is unique.</p>

## ForecastingFact

This is a read-only object linking a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

 **Note:** This information only applies to Collaborative Forecasts.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
ForecastCategoryName	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize the forecast category names.</p>

Field Name	Details
ForecastedObjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Contains the Split ID of the forecasted OpportunitySplit object if the forecast data source is opportunity splits or the OpportunityLineItem ID of the forecasted opportunity if the data source is product families. If the data source is product families and the opportunity has no line item, this field is Null. If the forecast data source is opportunities, this field is Null. This field is available in API version 29 and later. Read only.</p>
ForecastingItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the ForecastingItem.</p>
ForecastingTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related ForecastingType.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The opportunity ID.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the opportunity owner.</p>

Field Name	Details
PeriodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Period ID for the forecast.</p>
Territory2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the territory to forecast on. Available in API version 43 and later.</p>

## Usage

Use this object to get information about opportunities linked to forecasting items.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

## ForecastingItem

This is a read-only object used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of the following when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of the following when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API versions 26 and greater.

Additionally, note that users:

- with the “View All Forecasts” permission have access to all `ForecastingItem` fields.
- without the “View All Forecasts” permission have access to all fields for their own subordinates and child territories.

Other users can see the ForecastingItem object, but not its records.

 **Note:** This information only applies to Collaborative Forecasts.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
<code>AmountWithoutAdjustments</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b> The sum of a person's owned revenue opportunities and the person's subordinates' and child territories' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the role-based forecast hierarchy. This amount is visible only on reports.</p>
<code>AmountWithoutManagerAdjustment</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b> The forecast number as seen by the forecast owner. This is the sum of the owner's revenue opportunities and the owner's subordinates' and child territories' opportunities, including adjustments made by the forecast owner on the owner's or subordinates' and child territories' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.</p>
<code>AmountWithoutOwnerAdjustment</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p>

Field Name	Details
	<p><b>Description</b></p> <p>The forecast amount as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's and child territories' opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i></p>
ForecastAmount	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b></p> <p>The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' and child territories' opportunities, including all forecast adjustments.</p>
ForecastCategoryName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize the forecast category names.</p>
ForecastQuantity	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b></p> <p>The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments. This field is available in API version 28 and later.</p>
ForecastingItemCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b></p> <p>This field indicates which type of forecast rollup the forecasting item belongs to. Depending on whether your organization uses individual forecast category rollups</p>

## Field Name

## Details

or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field.

**Individual forecast category rollups:**

- PipelineOnly - Rollup from Pipeline opportunities only.
- BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.
- CommitOnly - Rollup from Commit opportunities only. Adjustable.

**Cumulative forecast rollups:**

- OpenPipeline - Rollup from Pipeline + Best Case + Commit opportunities.
- BestCaseForecast - Rollup from Best Case + Commit + Closed opportunities. Adjustable.
- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

**Either cumulative or individual forecast category rollups:**

- ClosedOnly - Rollup from Closed opportunities only.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

---

`ForecastingTypeId`
**Type**

reference

**Properties**

Filter, Group, Sort

**Description**The ID of the related `ForecastingType`.

---

`HasAdjustment`
**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

Field Name	Details
	<p><b>Description</b></p> <p>A flag that indicates if the forecasting item includes a <i>manager</i> adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment.</p>
HasOwnerAdjustment	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>A flag that indicates if the forecasting item includes an <i>owner</i> adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. Available in API versions 33 and greater.</p>
IsAmount	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true. This field is available in API version 28 and later.</p>
IsQuantity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true. This field is available in API version 28 and later.</p>
IsUpToDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>A flag indicating whether or not a specific forecasting item reflects current information. For example, if users are making adjustments which are in process, the item won't be up-to-date.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the forecast owner.</p>
OwnerOnlyAmount	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b> The sum of a person's revenue opportunities, without adjustments.</p>
OwnerOnlyQuantity	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b> The sum of a person's quantity opportunities, without adjustments. This field is available in API version 28 and later.</p>
ParentForecastingItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the ForecastingItem that the current item rolls up to.</p>
PeriodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Period ID for the forecast.</p>
ProductFamily	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The product family of the forecast item. This field is available in API version 29 and later. Read only.</p>
Territory2Id	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the territory to forecast on. Available in API version 43 and later.</p>
QuantityWithoutAdjustments	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Filter, Sort, Nillable</p> <p><b>Description</b></p> <p>The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy. This field is available in API version 28 and later.</p>
QuantityWithoutManagerAdjustment	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Filter, Sort, Nillable</p> <p><b>Description</b></p> <p>The forecast number as seen by the forecast owner. This is the sum of the owner's quantity opportunities and subordinates' opportunities, including adjustments made on the subordinates' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy. This field is available in API version 28 and later.</p>
QuantityWithoutOwnerAdjustment	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Filter, Sort, Nillable</p> <p><b>Description</b></p> <p>The forecast quantity as seen by the forecast owner without the owner's adjustment. This is the sum of the subordinate's opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i> This field is available in API version 38.0 and later.</p>

Field Name	Details
SubordinateOverrides	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The total number of adjustments made to a forecast down the hierarchical chain. For example, User A has a forecast without adjustments. If User A adjusts User B's forecast, User A's <code>SubordinateOverrides</code> value is 1. Then if User B adjusts User C's forecast, User A's <code>SubordinateOverrides</code> value is 2. If User A removes his adjustment from User B's forecast, User A's <code>SubordinateOverrides</code> value is 1.</p> <p>This field is available in API version 38.0 and later.</p>

## Usage

Use this object to obtain individual forecast amounts, either with or without adjustments, based on a user's perspective and forecast role. The `ForecastingItem` object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write `ForecastingAdjustment` records.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

## ForecastingOwnerAdjustment

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a `ForecastingItem`. Available in API versions 33 and greater. This object is separate from the `ForecastingAdjustment` object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

 **Note:** This information only applies to Collaborative Forecasts.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The currency code of the adjustment. If omitted, the default is the importing user's personal currency.</p>
ForecastCategoryName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize forecast category names. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.</p>
ForecastingItemCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> This field indicates which type of forecast rollup the owner adjustment belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the <code>ForecastingItemCategory</code> field.</p> <p><b>Individual forecast category rollups:</b></p> <ul style="list-style-type: none"> <li>• PipelineOnly - Rollup from Pipeline opportunities only.</li> <li>• BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.</li> <li>• CommitOnly - Rollup from Commit opportunities only. Adjustable.</li> </ul> <p><b>Cumulative forecast rollups:</b></p> <ul style="list-style-type: none"> <li>• OpenPipeline - Rollup from Pipeline + Best Case + Commit opportunities.</li> </ul>

## Field Name

## Details

- BestCaseForecast - Rollup from Best Case + Commit + Closed opportunities. Adjustable.
- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

**Either cumulative or individual forecast category rollups:**

- ClosedOnly - Rollup from Closed opportunities only.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting owner adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. These are the valid pairs.

**Individual forecast category rollups:**

- `ForecastCategoryName: BestCase,`  
`ForecastingItemCategory: BestCaseOnly`
- `ForecastCategoryName: Commit,`  
`ForecastingItemCategory: CommitOnly`

**Cumulative forecast category rollups:**

- `ForecastCategoryName: null, ForecastingItemCategory: BestCaseForecast`
- `ForecastCategoryName: null, ForecastingItemCategory: CommitForecast`

Territory2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the territory to forecast on. Available in API version 43 and later.</p>

## Usage

Use this object to obtain a user's adjustment detail for a specified ForecastingItem in their own forecast.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

## ForecastingQuota

---

This object represents an individual user's or territory's quota for a specified time period. The "Manage Quotas" user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The "View All Forecasts" permission is required to View any user's forecast, regardless of the forecast hierarchy. Available in API versions 25 and greater. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

 **Note:** This information only applies to Collaborative Forecasts.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

	<p><b>Description</b></p> <p>The ID of either of the following:</p> <ul style="list-style-type: none"> <li>• The role of the manager whose forecasts you want to share.</li> <li>• The territory whose forecasts you want to share.</li> </ul>
RoleType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The type of hierarchy associated with the forecast share.</p> <ul style="list-style-type: none"> <li>• R - Role-based</li> <li>• T - Territory-based</li> <li>• Y - Territory2-based</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the user with whom the forecast is shared.</p>

## Usage

Use this object to let any stakeholder at your company view and adjust forecast managers' forecasts.

## ForecastingType

This object is used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API versions 30.0 and greater.

**Note:** This information only applies to Collaborative Forecasts.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
CanDisplayQuotas	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Whether a forecast type can show quota information. Available in API version 38.0 and later.</p>
DateType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The date type that forecast amounts are based on. Values are:</p> <ul style="list-style-type: none"> <li>• <code>OpportunityCloseDate</code>: Base forecasts on opportunity close dates.</li> <li>• <code>ProductDate</code>: Base forecasts on opportunity product line item dates, if available.</li> <li>• <code>ScheduleDate</code>: Base forecasts on opportunity product schedule dates, if available.</li> </ul> <p>Available in API version 42.0 and later.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the forecasting type. Allowed values include:</p> <ul style="list-style-type: none"> <li>• <code>LineItemQuantityProductDate</code> : Product Families - Quantity by product date. Available in API version 47.0 and later.</li> <li>• <code>LineItemQuantityScheduleDate</code> : Product Families - Quantity by schedule date. Available in API version 47.0 and later.</li> <li>• <code>LineItemRevenueProductDate</code> : Product Families - Revenue by product date. Available in API version 47.0 and later.</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <code>LineItemRevenueScheduleDate</code> : Product Families - Revenue by schedule date. Available in API version 47.0 and later.</li> <li>• <code>OpportunityLineItemQuantity</code> : Product Families - Quantity</li> <li>• <code>OpportunityLineItemRevenue</code> : Product Families - Revenue</li> <li>• <code>OpportunityOverlayRevenue</code> : Opportunity Overlay Splits - Revenue</li> <li>• <code>OpportunityQuantity</code> : Opportunities - Quantity</li> <li>• <code>OpportunityQuantityProductDate</code> : Opportunities - Quantity by product date. Available in API version 43.0 and later.</li> <li>• <code>OpportunityQuantityScheduleDate</code> : Opportunities - Quantity by schedule date. Available in API version 43.0 and later.</li> <li>• <code>OpportunityRevenue</code> : Opportunities - Revenue</li> <li>• <code>OpportunityRevenueProductDate</code> : Opportunities - Revenue by product date. Available in API version 43.0 and later.</li> <li>• <code>OpportunityRevenueScheduleDate</code> : Opportunities - Revenue by schedule date. Available in API version 43.0 and later.</li> <li>• <code>OpportunitySplitRevenue</code> : Opportunity Revenue Splits - Revenue</li> <li>• <b><code>Territory_Model_NameN</code></b>: Territories, where <i>Territory_Model_Name</i> is the name of your active territory model in the API. <i>Territory_Model_Name</i> can be followed by <i>N</i>, an auto-generated number that distinguishes between territory forecast types. Available in API version 44.0 and later.</li> <li>• <b><code>Territory_Model_NameN_ProductFamily</code></b>: Deprecated. Territories - Product Families, where <i>Territory_Model_Name</i> is the name of your active territory model in the API and can be followed by <i>N</i>, an auto-generated number that distinguishes between territory forecast types. Available in API version 45.0 and 46.0. For territory models created in API version 47.0 and later, <b><code>Territory_Model_NameN</code></b> is used.</li> <li>• The name of a custom opportunity split type that has been enabled as a forecast type. Custom split types are based on currency fields, which can contain revenue amounts only.</li> </ul> <p>The <code>DeveloperName</code> is called <code>name</code> in the Metadata API and Forecasting Type in custom reports.</p>
HasProductFamily	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Group</p> <p><b>Description</b> Indicates whether a forecasts view includes product families. Available in API version 40.0 and later.</p>

Field Name	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the forecasting type is enabled.</p>
IsAmount	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the forecasting type is based on the revenue measurement.</p>
IsQuantity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the forecasting type is based on the quantity measurement.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language of the forecasting type.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Master label for this Forecasting Type value. This display value is the internal label that does not get translated.</p>
OpportunitySplitTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates whether the forecasting type has a split type, and if so, the name the split type. Available in API version 41.0 and later.</p>
RoleType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Indicates whether the role type has a forecasting type, and if so, which forecasting type. Possible values are <math>\mathbb{R}</math> (user role-based forecasting type), <math>\mathbb{T}</math> (Territory1-based forecasting type; not used), and <math>\mathbb{Y}</math> (Territory2-based forecasting type). Available in API version 41.0 and later.</p>
Territory2ModelId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Indicates whether the forecasting type has a Territory2 model, and if so, the name of the Territory2 model. Available in API version 41.0 and later.</p>

## Usage

Use this object to identify the forecast type of `ForecastingAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects.

## ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

## Fields

Field Name	Details
ExternalId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A unique system-generated numerical identifier for the user.</p>
ForecastingDisplayedTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Group, Sort, Update</p> <p><b>Description</b> An identifier for the forecasting type that's displayed.</p>
ForecastingPeriodDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Group, Nillable, Sort, Update</p> <p><b>Description</b> How long the forecasting period lasts.</p>
ForecastingPeriodType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The forecasting period's type. Valid values include: Month, Quarter, Week, or Year</p>
ForecastingStartPeriod	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date when the forecasting period begins.</p>
ForecastingViewCurrency	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Group, Nillable, Sort, Update</p> <p><b>Description</b> The currency shown on the forecasts page.</p>
IsForecastingHideZeroRows	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Group, Sort, Update</p> <p><b>Description</b> Whether the forecasts page shows zero-value rows.</p>
IsForecastingShowQuantity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Group, Sort, Update</p> <p><b>Description</b> Whether the forecasts page shows forecast quantity.</p>
IsHideForecastingGuidedTour	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Group, Sort, Update</p> <p><b>Description</b> Whether the forecasts page shows the guided tour.</p>
IsHideForecastingQuotaColumn	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Group, Sort, Update</p> <p><b>Description</b> Whether the forecasts page shows a quota column.</p>
IsShowForecastingQuotaAttainment	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Group, Sort, Update</p> <p><b>Description</b> Whether the forecasts page shows quota attainment information.</p>

# FormulaFunction

---

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field	Details
<code>CategoryId</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the FormulaFunctionCategory.</p>
<code>Description</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Description of the formula function.</p>
<code>DurableId</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
<code>ExampleString</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Describes the function and what arguments you can use with it.</p>
<code>IsAllowedInEntityContext</code>	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether you can use the formula function on an Entity (<code>true</code>) or not (<code>false</code>). For example, you cannot use the PRIORVALUE function in a custom Account formula field. The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the <a href="#">FormulaFunctionAllowedType</a> on page 1348 object instead.</p>
IsAllowedInFlowContext	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the formula function is allowed in a Flow (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the <a href="#">FormulaFunctionAllowedType</a> on page 1348 object instead.</p>
IsAllowedInVisualforceContext	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the formula function is allowed in Visualforce (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the <a href="#">FormulaFunctionAllowedType</a> on page 1348 object instead.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The formula function label that appears in the user interface.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the formula function.</p>

## Usage

Query `FormulaFunction` to search for available formula functions, such as `AND()`, `ISBLANK()`, `MAX()`, `MIN()`, and others.

## FormulaFunctionAllowedType

---

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field	Details
DurableId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
FunctionId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier for the supported function.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The name of the formula type in which the function is supported. Possible values are:</p> <ul style="list-style-type: none"> <li>• FLOW</li> <li>• VALIDATION</li> <li>• VISUALFORCE</li> </ul>

# FormulaFunctionCategory

---

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field	Details
DurableId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Label of the FormulaFunctionCategory that appears in the user interface.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the FormulaFunctionCategory.</p>

## Usage

Query FormulaFunctionCategory to search for categories of available formula functions, such as `Math`, `Logical`, `Date` and `Time`, and others.

# FulfillmentOrder

---

Represents a group of products and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The FulfillmentOrderLineItems belonging to a FulfillmentOrder are associated with OrderItemSummary objects belonging to a single OrderSummary. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the Account or Person Account associated with the FulfillmentOrder. It represents the shopper in the storefront.</p>
BillToContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Contact associated with the FulfillmentOrder. It represents the shopper in the storefront when not using person accounts.  This field is available in API version 49.0 and later.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> ISO code for the currency of the OrderSummary associated with the FulfillmentOrder. The default value is USD.  Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"><li>• DKK—Danish Krone</li><li>• EUR—Euro</li><li>• GBP—British Pound</li><li>• USD—U.S. Dollar</li></ul> <p>This field is available in API version 49.0 and later.</p>
DeliveryMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the DeliveryMethod used for this FulfillmentOrder.</p>
FulfilledFromLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Location handling this FulfillmentOrder.</p>
FulfilledToAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Address of the recipient.</p>
FulfilledToCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Recipient address city.</p>
FulfilledToCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Recipient address country.</p>

Field	Details
FulfilledToEmailAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Email address of the recipient.</p>
FulfilledToGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy of the geocode for the recipient address. Possible values are:</p> <ul style="list-style-type: none"> <li>• Address</li> <li>• Block</li> <li>• City</li> <li>• County</li> <li>• ExtendedZip</li> <li>• NearAddress</li> <li>• Neighborhood</li> <li>• State</li> <li>• Street</li> <li>• Unknown</li> <li>• Zip</li> </ul>
FulfilledToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
FulfilledToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
FulfilledToName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Name on the recipient address.</p>
FulfilledToPhone	<p><b>Type</b></p> <p>phone</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Phone number of the recipient.</p>
FulfilledToPostalCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Recipient address postal code.</p>
FulfilledToState	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Recipient address state.</p>
FulfilledToStreet	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Recipient address street.</p>
FulfillmentOrderNumber	<p><b>Type</b></p> <p>string</p>

Field	Details
	<p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> ID of the FulfillmentOrder.</p>
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments and tax, of the products and delivery charges on the FulfillmentOrder. This includes all FulfillmentOrderLineItems associated with the FulfillmentOrder. This amount is equal to TotalAmount + TotalTaxAmount.</p>
InvoiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Invoice associated with the FulfillmentOrder.</p>
IsSuspended	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the FulfillmentOrder is suspended. The default value is false.</p>
ItemCount	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of the quantities of the FulfillmentOrderLineItems included in the FulfillmentOrder.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Timestamp for when the current user last viewed a record related to this record.</p>

Field	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the original Order that generated the FulfillmentOrder.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the OrderSummary associated with the FulfillmentOrder.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the User who currently owns this FulfillmentOrder. Default value is the User logged in to the API to perform the create.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Status of the FulfillmentOrder. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category. Default values are:</p> <ul style="list-style-type: none"> <li>• Allocated (Activated)</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>Assigned (Fulfilling)</li> <li>Cancelled (Cancelled)</li> <li>Draft (Draft)</li> <li>Fulfilled (Closed)</li> <li>Pickpack (Fulfilling)</li> </ul>
StatusCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Status category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each status category corresponds to one or more statuses.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>ACTIVATED—Activated</li> <li>CANCELLED—Cancelled</li> <li>CLOSED—Closed</li> <li>DRAFT—Draft</li> <li>FULFILLING—Fulfilling</li> </ul>
TaxLocaleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The system used to handle tax on the original Order associated with the FulfillmentOrder. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>Gross (displays most prices and taxes as combined values)</li> <li>Net (displays most prices and taxes as separate values)</li> </ul> <p>This field is available in API version 49.0 and later.</p>
TotalAdjustmentAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the price adjustments applied to the products on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Product.</p>

Field	Details
TotalAdjustment AmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the price adjustments applied to the products on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Product. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalAdjustmentTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjustmentAmount.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Adjusted total, not including tax, of the FulfillmentOrderLineItems, including products and delivery charges, on the FulfillmentOrder.</p>
TotalDelivery AdjustAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Charge.</p>
TotalDeliveryAdjust AmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the price adjustments applied to the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type</p>

Field	Details
	<p>code Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalDeliveryAdjustTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalDeliveryAdjustAmount.</p>
TotalDeliveryAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of the delivery charges on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type code Charge.</p>
TotalDeliveryAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalDeliveryTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalDeliveryAmount.</p>
TotalProductAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Total price of the products on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type code Product.</p>
TotalProductAmtWithTax	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Total price of the products on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalProductTaxAmount	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Tax on the TotalProductAmount.</p>
TotalTaxAmount	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Tax on the TotalAmount.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Type of the FulfillmentOrder. Each type corresponds to one type category, shown here in parentheses. You can customize the type picklist to represent your business processes, but the type category picklist is fixed because processing is based on those values. If you customize the type picklist, include at least one type value for each type category.</p> <p>Default values are:</p> <ul style="list-style-type: none"> <li>• Download (Digital)</li> <li>• Email (Digital)</li> <li>• In Store Pickup (Physical)</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• Retail Store (Physical)</li> <li>• Supplier (Drop Ship)</li> <li>• Warehouse (Physical)</li> </ul>
TypeCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each type category corresponds to one or more types. Possible values are:</p> <ul style="list-style-type: none"> <li>• DIGITAL—Digital</li> <li>• DROPSHIP—Drop Ship</li> <li>• PHYSICAL—Physical</li> </ul>

## FulfillmentOrderItemAdjustment

Represents a price adjustment on a FulfillmentOrderLineItem. Corresponds to an OrderItemAdjustmentLineSummary associated with the corresponding OrderItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> Amount, not including tax, of the adjustment.</p>
CampaignName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Campaign associated with the adjustment.</p>
CouponName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Coupon associated with the adjustment.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> ISO code for the currency of the FulfillmentOrderLineItem to which the adjustment applies. The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field	Details
	<p><b>Description</b> Text description of the adjustment.</p>
FulfillmentOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem to which the adjustment applies.</p>
FulfillmentOrderItemAdjustmentNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> ID of the FulfillmentOrderLineItemAdjustment.</p>
FulfillmentOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the FulfillmentOrderLineItem to which this adjustment applies.</p>
OrderItemAdjustmentLineSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the OrderItemAdjustmentLineSummary associated with the adjustment.</p>
PromotionName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Promotion associated with the adjustment.</p>
TotalAmtWithTax	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the Amount.</p>

## FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> Amount of tax represented by the FulfillmentOrderItemTax.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> ISO code for the currency of the FulfillmentOrderLineItem to which the tax applies. The default value is USD.  Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the FulfillmentOrderItemTax.</p>
FulfillmentOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the associated FulfillmentOrder.</p>
FulfillmentOrderItemAdjustId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderItemAdjustment to which the tax applies. If this value is null, the adjustment applies to a FulfillmentOrderLineItem.</p>
FulfillmentOrderItemTaxNumber	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>ID of the FulfillmentOrderItemTax.</p>
FulfillmentOrderLineItemId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>If this object represents tax on a FulfillmentOrderLineItem, this value is the ID of that FulfillmentOrderLineItem. If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderLineItem to which the adjustment applies.</p>
OrderItemTaxLineItemSummaryId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>ID of the OrderItemTaxLineItemSummary associated with the OrderItemSummary that corresponds to the FulfillmentOrderLineItem to which the tax applies.</p>
Rate	<p><b>Type</b></p> <p>percent</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Tax rate used to calculate the Amount.</p>
TaxEffectiveDate	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Date on which the Amount was calculated. Important due to tax rate changes over time.</p>

Field	Details
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates whether the Amount is actual or estimated. Possible values are:</p> <ul style="list-style-type: none"> <li>• Actual</li> <li>• Estimated</li> </ul>

## FulfillmentOrderLineItem

---

Represents a product or delivery charge belonging to a FulfillmentOrder. Corresponds to an OrderItemSummary. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs.

### Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>ISO code for the currency of the FulfillmentOrder associated with the FulfillmentOrderLineItem. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Description of the FulfillmentOrderLineItem.</p>
EndDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>End date of the FulfillmentOrderLineItem.</p>
FulfillmentOrderId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem.</p>
FulfillmentOrderLineItemNumber	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>ID of the FulfillmentOrderLineItem.</p>
GrossUnitPrice	<p><b>Type</b></p> <p>currency</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> Unit price, including tax, of the FulfillmentOrderLineItem. This value is equal to TotalPrice + TotalTaxAmount.  This field is available in API version 49.0 and later.</p>
OrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the original OrderItem for the OrderItemSummary associated with the FulfillmentOrderLineItem.</p>
OrderItemSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the OrderItemSummary associated with the FulfillmentOrderLineItem.</p>
OriginalQuantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> Original quantity of the FulfillmentOrderLineItem.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the product represented by the FulfillmentOrderLineItem.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p>

Field	Details
	<p><b>Description</b> Current quantity of the FulfillmentOrderLineItem. Equal to the original quantity minus any canceled quantity.</p>
QuantityUnitOfMeasure	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unit of measure of the quantity, for example: unit, gallon, ton, or case.</p>
ServiceDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> Service or start date of the FulfillmentOrderLineItem.</p>
TotalAdjustmentAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of any price adjustments applied to the FulfillmentOrderLineItem.</p>
TotalAdjustmentAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the price adjustments applied to the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalAdjustmentTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjustmentAmount.</p>

Field	Details
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments and tax, of the FulfillmentOrderLineItem.</p>
TotalLineAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> Total, not including adjustments or tax, of the FulfillmentOrderLineItem.</p>
TotalLineAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total price of the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalLineTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalLineAmount.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of the FulfillmentOrderLineItem. Equal to UnitPrice times Quantity.</p>
TotalTaxAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalPrice.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type of the FulfillmentOrderLineItem. Matches the type of the associated OrderItemSummary. Delivery Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses.  Possible values are:</p> <ul style="list-style-type: none"> <li>• Delivery Charge</li> <li>• Order Product</li> </ul>
TypeCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type code of the FulfillmentOrderLineItem. Matches the type code of the associated OrderItemSummary. Processing depends on this value. Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Product indicates that it represents any other type of product, service, or charge. Each type category corresponds to one or more types.  Possible values are:</p> <ul style="list-style-type: none"> <li>• Charge</li> <li>• Product</li> </ul>
UnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Unit price of the FulfillmentOrderLineItem.</p>

## Goal

---

The Goal object represents the components of a goal such as its name, description, and status.

## Supported Calls

[create\(\)](#), [delete\(\)](#), [describeLayout\(\)](#), [describeSObjects\(\)](#), [getDeleted\(\)](#), [getUpdated\(\)](#), [query\(\)](#), [retrieve\(\)](#), [search\(\)](#), [undelete\(\)](#), [update\(\)](#), [upsert\(\)](#)

## Fields

Field Name	Details
CompletionDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The completion date of the goal.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the goal. The maximum length is 65,535 characters.</p>
DueDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The date the goal is due.</p>
ImageUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to Goal objects of Type: Goal.</p>
IsKeyCompanyGoal	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the goal is a key company goal.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when a user last viewed a record that is related to this goal.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when a user last viewed this goal. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the goal. The maximum length is 255 characters.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who owns the goal.</p>
Progress	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The progress of the goal measured as a percentage.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The start date of the goal.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of the goal. Possible values:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Published</li> <li>• Completed</li> <li>• Canceled</li> <li>• Not Completed</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### GoalFeed

Feed tracking is available for the object.

**GoalHistory**

History is available for tracked fields of the object.

**GoalOwnerSharingRule**

Sharing rules are available for the object.

**GoalShare**

Sharing is available for the object.

## GoalLink

---

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The auto-generated name of the goal link.</p>
ParentGoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the parent goal.</p>
SubgoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the subgoal.</p>

# GoogleDoc

---

Represents a link to a Google Document. This object is available in API version 14.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available in **All** Editions except **Database.com** for Google Apps Premier Edition accounts. See the Salesforce online help for more information.

## Fields

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the Google document.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Update</p> <p><b>Description</b> The ID of the user who currently owns this Google Document. Default value is the user logged in to the API to perform the create.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Required. ID of the attachment's parent object. The following objects are supported as parents of Google documents: Account, Asset, Campaign, Case, Contact, Contract, Custom Object Behavior, Lead, Opportunity, Product2, and Solution.</p>
Url	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The URL of the Google document.</p>

## Group

A set of User records.

Groups are sets of users. They can contain individual users, other groups, the users in a particular role or territory, or the users in a particular role or territory plus all the users below that role or territory in the hierarchy.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, Customer Portal users and guest users can't access this object.

## Fields

Field	Details
<code>DefaultDivision</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> This record's default division. Only applicable if divisions are enabled for your organization.</p>
<code>DeveloperName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed</p>

Field	Details
	<p>package and the changes are reflected in a subscriber's organization. This name is unique by group type and corresponds to <b>Group Name</b> in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
<code>DoesIncludeBosses</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the managers have access (<code>true</code>) or do not have access (<code>false</code>) to records shared with members of the group. This field is only available for public groups. This field is available in API version 18.0 and later.</p>
<code>DoesSendEmailToMembers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the email is sent (<code>true</code>) or not sent (<code>false</code>) to the group members. The email is sent to queue members as well.</p>
<code>Email</code>	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Email address for a group of type Case. Applies only for a case queue.</p>
<code>Name</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name of the group. Corresponds to <b>Label</b> on the user interface.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the user who owns the group.</p>
QueueRoutingConfig	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Delete, Query, Retrieve, Update</p> <p><b>Description</b> The ID of the queue routing configuration associated with the queue.</p>
RelatedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the ID of the associated groups. For groups of type "Role," the ID of the associated UserRole. The RelatedId field is polymorphic.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Required. Type of the group. One of the following values:</p> <ul style="list-style-type: none"> <li>• AllCustomerPortal—Public group that includes all Customer Portal or Customer Community Plus users. This type is only available when a Customer Portal or a Customer Community is enabled for your org.</li> <li>• ChannelProgramGroup—Public group for partners in a channel program.</li> <li>• CollaborationGroup—Chatter group.</li> <li>• Manager—Public group that includes a user's direct and indirect managers. This group is read-only.</li> <li>• ManagerAndSubordinatesInternal—Public group that includes a user and the user's direct and indirect reports. This group is read-only.</li> <li>• Organization—Public group that includes all the User records in the organization. This group is read-only.</li> <li>• PRMOrganization—Public group that includes all the partners in an organization that has the partner portal feature enabled.</li> <li>• Queue—Public group that includes all the User records that are members of a queue.</li> <li>• Regular—Standard public group. When you create () a group, its type must be Regular, unless a partner portal is enabled for the organization, in which case the type can be Regular or PRMOrganization.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>Role</code>—Public group that includes all the User records in a particular UserRole.</li> <li>• <code>RoleAndSubordinates</code>—Public group that includes all the User records in a particular UserRole and all the User records in any subordinate UserRole.</li> <li>• <code>RoleAndSubordinatesInternal</code>—Public group that includes all the User records in an internal UserRole, excluding customer and partner roles, and all the User records in any subordinate internal UserRole.</li> <li>• <code>Territory</code>—Public group that includes all the User records in an organization that has the territory feature enabled.</li> <li>• <code>TerritoryAndSubordinates</code>—Public group that includes all the User records in a particular UserRole and all the User records in any subordinateUserRole in an organization that has the territory feature enabled.</li> </ul> <p>Only <code>Personal</code>, <code>Regular</code>, and <code>Queue</code> can be used when creating a group. The other values are reserved.</p>

## Usage

Unlike users, this object can be deleted.

Only public groups are accessible via the API. Personal groups are not available.

In API version 34.0 and later, you can query a group using `Related.Name` to retrieve the group's name. `Related.Name` is supported for public groups, user roles, territories, manager groups, and user names.

In API version 13.0 and later, if you delete a public group, it is deleted even if it has been used in sharing, consistent with the behavior for UserRole. In versions before 13.0, such sharing prevents the record from being deleted.

SEE ALSO:

[GroupMember](#)

[Object Basics](#)

## GroupMember

Represents a User or Group that is a member of a public group.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the Group.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the User or Group that is a direct member of the group.</p>

## Usage

A record exists for every User or Group who is a direct member of a public group whose `Type` field is set to Regular. User records that are indirect members of Regular public groups are not listed as group members. A User can be an indirect member of a group if he or she is in a UserRole above the direct group member in the hierarchy, or if he or she is a member of a group that is included as a subgroup in that group.

If you attempt to create a record that matches an existing record, system simply returns the existing record.

SEE ALSO:

[Object Basics](#)

## HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

**!** **Important:** Starting in Spring '16, API access to HashtagDefinition is disabled across all API versions. Any integrations relying on API queries to this object stop working. You can continue to use hashtags in posts and comments, and the hashtags continue to create corresponding topics. We recommend that you redirect all API queries and reports using the HashtagDefinition object to use the Topic object instead. For more information, see [Retiring the Legacy HashtagDefinition Object—FAQs](#).

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
HashtagCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times a hashtag topic is used.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The string of characters following the hashtag (#) in a hashtag topic.</p>
NameNorm	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The string of characters following the hashtag (#) in a hashtag topic, normalized to remove capitalization and punctuation.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Identifier of the <a href="#">community</a> to which the HashtagDefinition belongs. This field is available only if Salesforce Communities is enabled in your organization.</p>

## Usage

Use this object to identify public hashtag topics and see how often they're used.

# HealthCareDiagnosis

---

Represents information related to industry-standard healthcare diagnosis codes.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Category	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the category for this diagnosis such as newborn, pediatric, maternity, or adult.</p>
Code	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Industry-standard diagnosis code.</p>
CodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the diagnosis code.</p>
CodeType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of diagnosis code represented in the record such as ICD-9 or ICD-10.</p>

Field Name	Details
EffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Start date for the code.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> End date for the code.</p>
Gender	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates whether this diagnosis is for males, females, or all genders.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the diagnosis code is available for use.</p>
IsComplicationOrComorbidity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether this diagnosis is used to represent a complication or comorbidity.</p>
IsHospitalAcquiredCondition	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates whether this diagnosis represents a condition acquired while in the hospital.</p>
IsMajorComplicationOrComorbidity	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether this diagnosis is used to represent a major complication or comorbidity.</p>
IsPresentOnAdmissionExempt	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether diagnosis code is exempt from the diagnosis present on admission requirement.</p>
IsPrimaryDiagnosis	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether diagnosis code can be used as primary diagnosis only, or can be used in any diagnosis sequence.</p>
IsUnacceptablePrincipalDxIpAdmit	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether diagnosis code is an unacceptable principal diagnosis for inpatient admission per Medicare Code Edits.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use &lt;Code&gt;: &lt;Description&gt; or &lt;Code&gt;-&lt;Description&gt; such as (E08.37X9 - Diabetes mellitus due to underlying condition).</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the user who owns this record.</p>

## Associated Objects

# HealthCareProcedure

---

Represents information related to industry-standard healthcare procedure codes.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSOjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Category	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Category of the procedure code such as anesthesia, surgery, radiology, and so on.</p>
Code	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Industry standard procedure code such as CPT or HCPCS.</p>
CodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the procedure code.</p>
CodeShortDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Short description of the procedure code.</p>

Field Name	Details
CodeType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of procedure code represented in the record such as CPT or HCPCS.</p>
EffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Start date for the code.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> End date for the code.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the diagnosis code is available for use.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use &lt;Code&gt;: &lt;Description&gt; or &lt;Code&gt;-&lt;Description&gt; such as 95115: Allergy injection.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the user who owns this record.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [HealthCareProcedureHistory](#)

History is available for tracked fields of the object.

### [HealthCareProcedureOwnerSharingRule](#)

Sharing rules are available for the object.

### [HealthCareProcedureShare](#)

Sharing is available for the object.

## Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

All users, even those without the "View Setup and Configuration" user permission, can view holidays via the API.

## Fields

Field	Details
ActivityDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> If the Holiday <code>IsAllDay</code> flag is set to <code>true</code> (indicating that it is an all-day holiday), then the holiday due date information is contained in the <code>ActivityDate</code> field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant, and you should not attempt to alter it to account for any time zone differences.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Text description of the holiday.</p>
EndTimeInMinutes	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The end time of the holiday in minutes.</p>
IsAllDay	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the duration of the holiday is all day (<code>true</code>) or not (<code>false</code>).</p>
IsRecurrence	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the holiday is scheduled to repeat itself (<code>true</code>) or only occurs once (<code>false</code>). This is a read only field on update, but not on create. If this field value is <code>true</code>, then any recurrence fields associated with the given recurrence type must be populated.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the holiday.</p>
RecurrenceDayOfMonth	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The day of the month on which the holiday repeats.</p>
RecurrenceDayOfWeekMask	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The day or days of the week on which the holiday repeats. This field contains a bitmask. For each day of the week, the values are as follows:</p> <ul style="list-style-type: none"> <li>• Sunday = 1</li> <li>• Monday = 2</li> <li>• Tuesday = 4</li> <li>• Wednesday = 8</li> <li>• Thursday = 16</li> <li>• Friday = 32</li> <li>• Saturday = 64</li> </ul> <p>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = <math>4 + 16 = 20</math>.</p>
RecurrenceEndDateOnly	<p><b>Type</b> date</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last date on which the holiday repeats. For multiday recurring events, this is the day on which the last occurrence starts.</p>
RecurrenceInstance	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The frequency of the recurring holiday. For example, 2nd or 3rd.</p>
RecurrenceInterval	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The interval between recurring holidays.</p>
RecurrenceMonthOfYear	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The month of the year on which the event repeats.</p>
RecurrenceStartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date when the recurring holiday begins. Must be a date and time before <code>RecurrenceEndDateOnly</code>.</p>
RecurrenceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates how often the holiday repeats. For example, daily, weekly, or every Nth month (where "Nth" is defined in <code>RecurrenceInstance</code>).</p>

Field	Details
StartTimeInMinutes	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The start time of the holiday in minutes.</p>

## Usage

Use this object to view and update holidays, which specify dates and times at which associated business hours and escalation rules are suspended.

## IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field Name	Details
ContentType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The tab icon's content type, for example, "image/png."</p>
DurableId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A unique virtual Salesforce ID for the icon.</p>
Height	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The tab icon's height in pixels. If the icon content type is an SVG type, height and width values are not used.</p>
TabDefinitionId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The TabDefinition ID.</p>
Theme	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The icon's theme.</p>
Url	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The fully qualified URL for this icon.</p>
Width	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used.</p>

## Idea

---

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

 **Note:** For other standard objects, the `describeLayout()` call returns the `recordTypeMappings` section that contains the layout ID and picklist values for each record type. However, the `recordTypeMappings` section and the fields it includes are not available for the Idea object.

When performing a SOSL search on Idea objects, IdeaComment objects are also searched.

## Fields

Field	Details
AttachmentBody	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> File data for the attachment. This field is available in API version 28.0 and later.</p>
AttachmentContentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of the attachment. This field is available in API version 28.0 and later.</p>
AttachmentLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Size of the attachment in bytes. This field is available in API version 28.0 and later.</p>
AttachmentName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of the attachment. This field is available in API version 28.0 and later.</p>

Field	Details
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the Idea.</p>
Categories	<p><b>Type</b> multipicklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Customizable multi-select picklist used to organize Ideas into logical groupings.</p> <p> <b>Note:</b> This field is only available if your organization has the <code>Categories</code> field enabled. This field is enabled by default in organizations created after API version 14 was released. If the <code>Categories</code> field is enabled, API versions 13 and earlier do not have access to either the <code>Categories</code> or <code>Category</code> fields.</p>
Category	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Customizable picklist of values used to organize Ideas into logical groupings.</p> <p> <b>Note:</b> This field is not available if your organization has the multi-select <code>Categories</code> field enabled.</p>
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.</p> <p> <b>Note:</b> API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.</p>
CreatorFullPhotoUrl	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's profile photo. This field is available in API version 28.0 and later.</p>
CreatorName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.</p>
CreatorSmallPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's thumbnail photo. This field is available in API version 28.0 and later.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
IdeaThemeID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Identifies the idea theme associated with the idea.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
IsHtml	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Read-only. If this value is <code>true</code>, your organization has the Ideas HTML editor enabled, and the Idea Body may contain HTML. If this value is <code>false</code>, the HTML editor is disabled and the Idea Body only contains regular text.</p>
IsMerged	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Read only. Indicates whether the idea has been merged with a parent idea (<code>true</code>) or not (<code>false</code>). You can't vote for or add comments to a merged idea.</p> <p> <b>Note:</b> In API version 27, <code>IsMerged</code> replaces <code>IsLocked</code>. Existing formula fields that use <code>IsLocked</code> must be edited to use <code>IsMerged</code>.</p>
LastCommentDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date and time the last comment (child IdeaComment object) was added.</p>
LastCommentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Read only. The ID of the last comment (child IdeaComment object).</p>
LastReferencedDate	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
NumComments	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of comments (child <code>IdeaComment</code> objects) that users have submitted for the given idea.</p>
ParentIdeaId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID associated with this idea's parent idea. When multiple ideas are merged together, one idea becomes the parent (master) of the other ideas. The <code>ParentIdeaId</code> is automatically set when you merge ideas.</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the record type assigned to this object.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Customizable picklist of values used to specify the status of an idea.</p>

Field	Details
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The descriptive title of the idea.</p>
VoteScore	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The internal score of the Idea, used to sort Ideas on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface.</p> <p> <b>Note:</b> Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>
VoteTotal	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> An Idea's total number of points. Each vote a user makes is worth ten points, therefore the value of this field is ten times the number of votes an idea has received.</p> <p> <b>Note:</b> Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>

 **Note:** If you are importing Idea data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

## Usage

Use this object to track ideas, which are written suggestions on which users can vote and comment.

SEE ALSO:

[IdeaComment](#)

[Vote](#)

# IdeaComment

---

Represents a comment that a user has submitted in response to an idea.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

**Note:** When performing a SOSL search on IdeaComment objects, Idea objects are also searched.

## Fields

Field	Field Type
CommentBody	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Body of the submitted comment.</p>
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.</p> <p> <b>Note:</b> API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.</p>
CreatorFullPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's profile photo. This field is available in API version 28.0 and later.</p>
CreatorName	<p><b>Type</b> string</p>

Field	Field Type
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.</p>
CreatorSmallPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's thumbnail photo. This field is available in API version 28.0 and later.</p>
IdeaId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the idea on which this comment was made.</p>
IsHtml	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. If this value is <code>true</code>, your organization has the Ideas HTML editor enabled, and the <code>CommentBody</code> field may contain HTML. If this value is <code>false</code>, the HTML editor is disabled and the <code>CommentBody</code> field only contains regular text.</p>
UpVotes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of up votes for the question.</p>

 **Note:** If you import these records, and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

Use this object to track comments on ideas, which are users' text responses to ideas.

SEE ALSO:

[Idea](#)

[Vote](#)

## IdeaReputation

---

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

## Supported Calls

`query()`, `retrieve()`,

## Fields

Field	Details
<code>CommentCount</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of comments a user has created in a zone or the internal organization. This number excludes comments the user creates on his or her own idea.</p>
<code>CommentsReceivedCount</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of comments a user has received in a zone or the internal organization.</p>
<code>ContextId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Namepointing, Nillable, Sort</p> <p><b>Description</b> The ID of the zone or internal organization.</p>

Field	Details
DownVotesGivenCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of down votes a user has given in a zone or the internal organization.</p>
DownVotesReceivedCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of down votes a user has received in a zone or the internal organization.</p>
IdeaCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of ideas a user has created in a zone or the internal organization.</p>
ReputationLevel	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The reputation level that a user has achieved based on their score in a zone or within an organization.</p>
Score	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total score of a user's activity within a zone or within an organization.</p>
UpVotesGivenCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The number of up votes a user has given in a zone or the internal organization. This number doesn't include the default vote the system applies when the user creates the idea.</p>
UpVotesReceivedCount	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The number of up votes a user has received in a zone or the internal organization.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The user ID associated with the reputation.</p>

## Usage

Use to query a user's reputation within a zone.

## IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
ContextId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Namepointing, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the zone or internal organization.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Name of the reputation level. The name must be unique within the zone or internal organization. Maximum size is 50 characters.</p>
Threshold	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Minimum number of points for this level. The threshold must be unique within the zone or internal organization and must be greater than or equal to zero.</p>

## Usage

Use to create or edit reputation levels for an Ideas zone or internal organization.

## IdeaTheme

Represents an invitation to community members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`,

## Fields

Field Name	Details
Categories	<p><b>Type</b></p> <p>multipicklist</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Update</p>

Field Name	Details
	<p><b>Description</b> Customizable multi-select picklist used to organize ideas and idea themes into logical groupings.</p>
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort,</p> <p><b>Description</b> The zone ID associated with the idea theme.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the idea theme.</p>
EndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date marking the end of the idea theme.</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>

Field Name	Details
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date that the idea theme begins.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Customizable picklist of values used to specify the status of the idea theme.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Namefield, Sort, Update</p> <p><b>Description</b> Title of the idea theme.</p>

## Usage

Use the object to track ideas that are submitted to an idea theme.

## IdpEventLog

---

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
AppId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the app provider seeking authentication.</p>
AuthSessionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the authentication session.</p>
ErrorCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The error code for the authentication issue.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• AppAccessDenied—Error: App access denied</li> <li>• AppBlocked—Error: App blocked</li> <li>• ClientUnapproved—Error: Invalid grant</li> <li>• CodeExpired—Error: Expired authorization code</li> <li>• InternalError—Error: Internal Error</li> <li>• InvalidAuthnRequest—Error: Unable to parse AuthnRequest from service provider</li> <li>• InvalidClientCredentials—Error: Invalid client credentials</li> <li>• InvalidCode—Error: Invalid authorization code</li> <li>• InvalidDeviceId—Error: Invalid device ID</li> <li>• InvalidIdpEndpoint—Error: Invalid Identity Provider Endpoint URL</li> <li>• InvalidIssuer—Error: Invalid Issuer</li> <li>• InvalidScope—Error: Invalid scope(s)</li> <li>• InvalidSessionLevel—Error: Invalid session level</li> <li>• InvalidSettings—Error: IdP certificate is invalid or does not exist</li> <li>• InvalidSignature—Error: Invalid Signature</li> <li>• InvalidSp—Error: Misconfigured or invalid service provider</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>InvalidSpokeSp—Error: Invalid spoke SP settings</li> <li>InvalidUserCredentials—Error: Invalid user credentials</li> <li>NoAccess—Error: User does not have access to this service provider</li> <li>NoCustomAttrValue—Error: User does not have a value for the subject custom attribute</li> <li>NoCustomField—Error: Custom field not found</li> <li>NoSpokeId—Error: No Spoke ID found</li> <li>NoSubdomain—Error: Org has not configured My Domains yet</li> <li>NoUserFedId—Error: User does not have a Federation Identifier selected</li> <li>OauthError—OAuth Error</li> <li>Success</li> <li>UnableToResolve—Error: Unable to resolve request into a Service Provider</li> <li>UnknownError—Unknown Error</li> </ul>
IdentityUsed	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The identity (username) of the user being authenticated.</p>
InitiatedBy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The code describing how the authentication request was initiated. Possible values are:</p> <ul style="list-style-type: none"> <li>IdP—IdP-Initiated SAML</li> <li>OauthAuthorize—OAuth Authorization</li> <li>OauthTokenExchange—OAuth Token Exchange</li> <li>SP—SP-Initiated SAML</li> </ul>
OptionsHasLogoutUrl	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Whether a logout URL has been assigned to the app. This URL is where users are redirected when they log out.</p>

Field	Details
SamlEntityUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The authentication URL of the SAML provider.</p>
SsoType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of SSO. Options are:</p> <ul style="list-style-type: none"> <li>• 0–SAML</li> <li>• 1–OpenID Connect</li> </ul>
Timestamp	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time on which the event occurred.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user seeking authentication.</p>

## IframeWhiteListUrl

---

Represents a list of external domains that you allow to frame your Visualforce pages and Surveys. This object is available in API version 45.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
Context	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of content in the iframe. This value is available in API v49.0 and later.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> <li>• Surveys</li> <li>• VisualforcePages</li> </ul>
Url	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique domain to be whitelisted. Accepts these formats: example.com, *example.com, and http://example.com.</p>

## Usage

To use this object for framing Visualforce pages, on Session Settings in Setup, select **Enable clickjack protection for customer Visualforce pages** either **with headers disabled** or **with standard headers**. These options both allow framing of Visualforce pages on whitelisted external domains and provide clickjack protection.

Alternatively, you can customize session settings via the SecuritySettings Metadata API type. To use the IFrameWhiteListUrl object, set either the `enableClickjackNonsetupUser` or `enableClickjackNonsetupUserHeaderless` field to `true`. For more information, see [SecuritySettings](#) in the Metadata API Developer Guide.

## Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.

## Fields

Field Name	Details
Birthdate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer's birthdate.</p>
CanStorePiiElsewhere	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indication that you can store the customer's personally identifiable information (PII) outside of their legislation area. For example, you could store an EU citizen's PII data in the US.</p>
ChildrenCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of children the customer has.</p>
ConsumerCreditScore	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The person's credit score (e.g. 740).</p>
ConsumerCreditScoreProviderName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the company that provided the credit score.</p>

Field Name	Details
ConvictionsCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of convictions for the customer.</p>
DeathDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer's death date.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer's first name. Maximum size is 40 characters.</p>
HasOptedOutGeoTracking	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to not track geolocation on mobile devices.</p>
HasOptedOutProcessing	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to not process personal data, which can include collecting, storing, and sharing personal data.</p>
HasOptedOutProfiling	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Preference to not process data for predicting personal attributes, such as interests, behavior, and location.</p>
HasOptedOutSolicit	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to not solicit products and services.</p>
HasOptedOutTracking	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to not track customer web activity and whether the customer opens email sent through Salesforce.</p>
IndividualsAge	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates whether the customer is considered to be a minor.</p>
InfluencerRating	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A measure of the person's influence, irrespective of how we do business with them.</p>
IsHomeOwner	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the customer owns a home.</p>

Field Name	Details
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The customer's last name. Maximum size is 80 characters.</p>
MilitaryService	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates whether the customer has served in the military.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Concatenation of <code>FirstName</code> and <code>LastName</code>. Maximum size is 121 characters.</p>
Occupation	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer's occupation. Maximum size is 150 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner of the account associated with this customer.</p>
Salutation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The title for addressing the customer, such as Dr. or Mrs.</p>
SendIndividualData	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to export personal data for delivery to the customer.</p>
ShouldForget	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Preference to delete records and personal data related to this customer.</p>
Website	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The URL for the customer's website.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### IndividualHistory

History is available for tracked fields of the object.

### IndividualShare

Sharing is available for the object.

## IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

## Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the changed field.</p>
IndividualId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the data privacy record. Label is <b>Individual ID</b>.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The updated value of the changed field.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The previous value of the changed field.</p>

## Usage

Use this object to identify changes to data privacy records.

This object respects field-level security on the parent object.

## IndividualShare

---

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is `Owner`. This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

## Fields

Field Name	Details
<code>IndividualAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the user or group has to the data privacy record. The possible values include:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All (Except for create or update.)</li> </ul> <p>Set this field to an access level that's higher than your default access level for individuals.</p>
<code>IndividualId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>ID of the Individual associated with this sharing entry. This field isn't available for updates.</p>
RowCause	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Reason that this sharing entry exists. Write to this field when its value is omitted or set to <code>Manual</code> (default). We give you some of the many possible values, including:</p> <ul style="list-style-type: none"> <li>• <code>Manual</code>—The user or group has access because a user with "All" access manually shared the data privacy record with them.</li> <li>• <code>Owner</code>—The user is the owner of the data privacy record.</li> <li>• <code>Rule</code>—The user or group has access to the data privacy record via an Individual sharing rule.</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the User or Group that has been given access to the data privacy record. This field isn't available for updates.</p>

## Usage

This object lets you determine which users and groups can view or edit Individual records owned by other users.

## InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the organization the Employee is working in.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OrganizationCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. The code of the organization the Employee is working in.</p>
OrganizationName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the organization the Employee is working in.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create.</p>
ParentOrganizationId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>A reference to the parent organization.</p>

## Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

Users can edit non-posted invoices. Posted invoices can't be deleted. Once an invoice is posted, users can make payments against it to reduce its balance.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access these entities, your org must have a Salesforce Order Management license. These entities are available only in Lightning Experience.

## Fields

Field	Details
Balance	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The outstanding balance for this invoice. Equal to the invoice's total amount with tax, ignoring payments and adjustments.</p>

Field	Details
BillToContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Inherited from the account's Bill to Account.</p>
BillingAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The customer account for this invoice.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Users can add more information about this invoice. Maximum of 1000 characters.</p>
DocumentNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> System-generated number that is used to organize financial documents. Can be sequential or random.</p>
DueDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The customer must pay the invoice by the due date. Unpaid invoices past the due date may be sent to collections.</p>
InvoiceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The date that the invoice was posted. Used with payment terms to determine the invoice's <code>DueDate</code>. For example, an invoice with an <code>InvoiceDate</code> of 04/01 and Net 30 payment terms would have a <code>DueDate</code> of 05/01.</p>
<code>InvoiceNumber</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>System-created unique ID for this invoice.</p>
<code>OwnerId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The user who owns an invoice record.</p>
<code>ReferenceEntityId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the order or order summary that created this invoice.</p>
<code>Status</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The state of the invoice.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Canceled</code>: Reserved for future use.</li> <li>• <code>Draft</code>: Reserved for future use.</li> <li>• <code>ErrorPosting</code>: Reserved for future use.</li> <li>• <code>Pending</code>: Reserved for future use.</li> <li>• <code>Posted</code>: Reserved for future use.</li> </ul>
<code>TotalAdjustmentAmount</code>	<p><b>Type</b></p> <p>currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of the invoice's adjustment line amounts.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum TotalAmount values on the invoice's lines.</p>
TotalAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of TotalAmountWithTax values on the invoice's lines.</p>
TotalChargeAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of the invoice's charges.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of TaxAmount values on the invoice lines.</p>

## InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access these entities, your org must have a Salesforce Order Management license. These entities are available only in Lightning Experience.

## Fields

Field	Details
AdjustmentAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of adjustments made to the invoice line.</p>
ChargeAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of charges made to the invoice line.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Description of the invoice line.</p>
GroupReferenceEntityItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Grouping field for adjustment line items.</p>
InvoiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The invoice that contains this invoice line.</p>

Field	Details
InvoiceLineEndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> For invoice lines made from a time-based service, the end date of the billing for the service.</p>
InvoiceLineStartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> For invoice lines made from a time-based service, the first date of the billing for the service.</p>
InvoiceStatus	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> State of the invoice line. Inherited from the invoice's status.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Name of the invoice line.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The product that was charged or ordered to create the invoice line.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Number of units of the order product that created the invoice line.</p>

Field	Details
ReferenceEntityItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The order item or adjustment item that created the invoice line.</p>
ReferenceEntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of transaction that created the invoice line. Possible values are:</p> <ul style="list-style-type: none"> <li>• DeliveryCharge</li> <li>• OrderProduct</li> </ul>
ReferenceEntityTypeCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of object that created the invoice line. Possible values are:</p> <ul style="list-style-type: none"> <li>• Charge</li> <li>• Product</li> </ul>
RelatedLineId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The original invoice line that was adjusted or taxed.</p>
TaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total tax for the invoice line.</p>

Field	Details
TaxCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The code used to calculate tax rate for the invoice line.</p>
TaxEffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date used to calculate the invoice line's TaxAmount.</p>
TaxName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> User-defined name for the applied tax.</p>
TaxRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Percentage value used for calculating tax.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of the invoice line before any applicable tax.</p>
TotalAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Total amount of tax for this invoice line, with tax included. Sum of <code>TotalAmount</code> and <code>TaxAmount</code>.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Shows the type of transaction for the invoice line.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Charge</li> <li>• Tax</li> </ul>
UnitPrice	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Price for one unit of the item on the invoice line.</p>

## JobProfile

---

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled in your org.

## Fields

Field	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed a related record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed this record.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the job profile.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner of the job profile.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [JobProfileFeed](#)

Feed tracking is available for the object.

### [JobProfileHistory](#)

History is available for tracked fields of the object.

### [JobProfileOwnerSharingRule](#)

Sharing rules are available for the object.

### [JobProfileShare](#)

Sharing is available for the object.

# Knowledge\_\_Feed

---

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 1246.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Lightning Knowledge must be enabled in your org.

## Fields

Field	Details
<code>BestCommentId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the comment marked as best answer on a question post.</p>
<code>Body</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p> <p>Although a value for <code>Body</code> is not required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.</p> <p> <b>Tip:</b> See the <a href="#">IsRichText</a> field for a list of HTML tags supported in the body of rich text posts.</p>
<code>CommentCount</code>	<p><b>Type</b> int</p>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>&lt;ul&gt;</code></li> <li>• <code>&lt;ol&gt;</code></li> <li>• <code>&lt;li&gt;</code></li> <li>• <code>&lt;img&gt;</code></li> </ul> <p>The <code>&lt;img&gt;</code> tag is accessible only via the API and must reference files in Salesforce similar to this example: <code>&lt;img src="sfdc://069B0000000omjh"&gt;&lt;/img&gt;</code></p> <p> <b>Note:</b> In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of likes associated with this feed item.</p>
LinkUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The URL of a <code>LinkPost</code>.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the Knowledge article to which the feed item is related.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code>. This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code>.</p> <p>For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code>.</p>

Field	Details
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code>.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, and <code>TextPost</code>, don't create feed items of other types directly from the API.</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a <code>Task</code> associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or <code>Event</code> associated with a case record (excluding email and call logging).  For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence.</li> <li>• <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.</li> <li>• <code>AnnouncementPost</code>—Not used.</li> <li>• <code>ApprovalPost</code>—generated when a user submits an approval.</li> <li>• <code>BasicTemplateFeedItem</code>—Not used.</li> <li>• <code>CanvasPost</code>—a post made by a canvas app posted on a feed.</li> <li>• <code>CollaborationGroupCreated</code>—generated when a user creates a public group.</li> <li>• <code>CollaborationGroupUnarchived</code>—Not used.</li> <li>• <code>ContentPost</code>—a post with an attached file.</li> <li>• <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher.</li> <li>• <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold.</li> <li>• <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed.</li> <li>• <code>LinkPost</code>—a post with an attached URL.</li> <li>• <code>PollPost</code>—a poll posted on a feed.</li> <li>• <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>QuestionPost</code>—generated when a user posts a question.</li> <li>• <code>ReplyPost</code>—generated when Chatter Answers posts a reply.</li> <li>• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC.</li> <li>• <code>TextPost</code>—a direct text entry on a feed.</li> <li>• <code>TrackedChange</code>—a change or group of changes to a tracked field.</li> <li>• <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated.</li> </ul> <p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>:</p> <ul style="list-style-type: none"> <li>• <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case.</li> <li>• <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.</li> <li>• <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object.</li> <li>• <code>ChangeStatusPost</code>—generated event when a user changes the status of a case.</li> <li>• <code>ChatTranscriptPost</code>—generated event when Chat transcript is saved to a case.</li> <li>• <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received.</li> <li>• <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated.</li> <li>• <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status.</li> <li>• <code>SocialPost</code>—generated when a social post is created from a case.</li> </ul> <p> <b>Note:</b> If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

## Knowledge\_\_ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticle](#) on page 1449.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the Knowledge User feature license.

## Fields

Field	Details
ArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was archived.</p>
ArticleNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
CaseAssociationCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of cases attached to the article.</p>
FirstPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was first published.</p>

Field	Details
LastPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was last published.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MasterLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.</p>
TotalViewCount	<p><b>Type</b> int</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of views for this article. This field is available in API version 39.0 and later.</p>

## Knowledge\_\_kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

**Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticleVersion](#) on page 1452.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

Field	Details
ArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was archived.</p>

Field	Details
ArticleArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArticleArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was archived.</p>
ArticleCaseAttachCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of cases where this article is attached.</p>
ArticleCreatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who created the article.</p>
ArticleCreatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was created.</p>
ArticleMasterLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b> The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
ArticleNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
ArticleTotalViewCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of views for the article.</p>
AssignedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who assigned the article.</p>
AssignedToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user assigned to the article.</p>
AssignmentDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was assigned to a user.</p>
AssignmentDueDate	<p><b>Type</b> dateTime</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The due date when an article is assigned.</p>
AssignmentNote	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Notes to the assignee from the user who assigned the article.</p>
FirstPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was first published.</p>
IsLatestVersion	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the master language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because the online version is also the latest version. This field is available in API version 24.0 and later.</p>
IsMasterLanguage	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>
IsOutOfDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>
<code>IsVisibleInApp</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).</p>
<code>IsVisibleInCsp</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).</p>
<code>IsVisibleInPkb</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).</p>
<code>IsVisibleInPrm</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).</p>
<code>KnowledgeArticleId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.</p>

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>.  Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types.</p>
LastPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was last published.</p>
MasterVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticleVersion	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the article's owner.</p>

Field	Details
PublishStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The publication status for the article:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b>: any draft articles.</li> <li>• <b>Online</b>: articles published in Salesforce Knowledge.</li> <li>• <b>Archived</b>: archived articles.</li> </ul> <p>A user must have the “Manage Articles” permission enabled to use <b>Online</b>.</p> <p>Article queries and searches in SOQL or SOSL require that you specify either the <b>PublishStatus</b> or the <b>Id</b> field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a <b>PublishStatus</b> of <b>Archived</b>, also check that <b>IsLatestVersion</b> equals <b>false</b> in your WHERE clause.</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the API Name that describes the type of article. Use the record type to determine the article structure and other settings for different types of content.</p>
SourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the source from which the article was created (Case or Reply).</p>
Summary	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Summary of the article. Maximum size is 1000 characters.</p>
Title	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Article's title. Maximum size is 255 characters.</p>
TranslationCompletedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.</p>
TranslationExportedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.</p>
TranslationImportedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.</p>
UrlName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.</p>
ValidationStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group</p>

Field	Details
	<p><b>Description</b></p> <p>Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code>. The default value is <code>Not Validated</code>. This field is available in API version 24.0 or later.</p>
VersionNumber	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Group, Sort</p> <p><b>Description</b></p> <p>The number assigned to a version of an article. This field is available in API version 24.0 and later.</p>

## Knowledge\_\_DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Lightning Knowledge must be enabled in your org.

## Fields

Field	Details
DataCategoryGroupName	<p><b>Type</b></p> <p>datacategorygroupreference</p> <p><b>Properties</b></p> <p>Create</p> <p><b>Description</b></p> <p>Unique name of the data category group which has categories associated with the article.</p>
DataCategoryName	<p><b>Type</b></p> <p>datacategorygroupreference</p>

Field	Details
	<p><b>Properties</b> Create</p> <p><b>Description</b> Unique name of the data category associated with the article.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the article associated with the data category selection.</p>

## Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use this object to query and manage article categorization in your organization. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

 **Note:** When using this object to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

## KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the community the topic exists in. This field is available only if Salesforce Communities is enabled for your organization.</p>

Field Name	Details
RawRank	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Rank of this user's knowledge on the topic relative to other users.</p>
TopicId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Unique ID for the topic in Salesforce.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Unique ID for the user in Salesforce.</p>

## KnowledgeArticle

---

Provides read-only access to an article and the ability to delete the master article. This object is available in API version 19.0 and later.

Unlike KnowledgeArticleVersion, the ID of a KnowledgeArticle record is identical irrespective of the article's version (status).

[Knowledge\\_\\_ka](#) on page 1436 is derived from this object.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

## Fields

Field Name	Details
ArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was archived.</p>
ArticleNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
CaseAssociationCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of cases attached to the article.</p>
FirstPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was first published.</p>
LastPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The date when the article was last published.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MasterLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
MigratedToFromArticle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.</p>
TotalViewCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Total number of views for this article. This field is available in API version 39.0 and later.</p>

## Usage

Use this object to query or retrieve articles. `KnowledgeArticle` can be used in a SOQL clause, but doesn't provide access to the fields from the article. Provides read-only access to an article and the ability to delete the master article.

## Usage for SOQL with KnowledgeArticle

To expose the `migrated_to_from_id` column on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticle** in **KnowledgeArticle**.

For SOQL:

- To filter by `MigratedToFromArticle`, remove any other filters.
- When filtering by `MigratedToFromArticle`, use the '=' or 'IN' operator.
- When filtering by `MigratedToFromArticle`, the value can't be null or empty.

SEE ALSO:

[KnowledgeArticleVersion](#)

## KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

Use this object to:

- Query or search generically across multiple types of articles.
- Filter on a specific version.
- Update standard fields, those fields that are updateable, in draft versions.

When you query on the archived article, the results include both the article and the article's archived versions.

[Knowledge\\_\\_kav](#) on page 1439 is derived from this object.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`

### Note:

- You can only update draft versions.
- You can't update draft translations with the `knowledgeManagement` REST API.

- For Lightning Knowledge, to create, update, or delete a Knowledge article version, use the call on Knowledge\_\_kav. For example, to delete, use `Knowledge__kav.delete()`.
- For Knowledge in Salesforce Classic, to create, update, or delete a Knowledge article version, use the call on `ArticleType__kav`, where `ArticleType` is the name of the article's type. For example, to delete, use `ArticleType__kav.delete()`.

## Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the Knowledge User feature license.

## Fields

Field Name	Details
ArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was archived.</p>
ArticleArchivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who archived the article.</p>
ArticleArchivedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was archived.</p>

Field Name	Details
ArticleCaseAttachCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of cases where this article is attached.</p>
ArticleCreatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who created the article.</p>
ArticleCreatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was created.</p>
ArticleMasterLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The article's original language. Only accessible if your knowledge base supports multiple languages.</p>
ArticleNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.</p>
ArticleTotalViewCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> Total number of views for the article.</p>
ArticleType	<p><b>Type</b> string</p> <p><b>Properties</b> Defaulted on create,Filter</p> <p><b>Description</b> Indicates the API Name of the article type. The <code>ArticleType</code> is assigned to the article when it's created. You can't change the value of this field. This field is available in orgs using Knowledge in Salesforce Classic in API version 26.0 and later.</p>
AssignedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who assigned the article.</p>
AssignedToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user assigned to the article.</p>
AssignmentDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the article was assigned to a user.</p>
AssignmentDueDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The due date when an article is assigned.</p>
AssignmentNote	<p><b>Type</b> textarea</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Notes to the assignee from the user who assigned the article.</p>
FirstPublishedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was first published.</p>
IsLatestVersion	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the master language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because the online version is also the latest version. This field is available in API version 24.0 and later.</p>
IsMasterLanguage	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>
IsOutOfDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.</p>

Field Name	Details
IsVisibleInApp	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInCsp	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInPkb	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).</p>
IsVisibleInPrm	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).</p>
KnowledgeArticleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.</p>
Language	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>.  Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types.</p>
<code>LastPublishedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the article was last published.</p>
<code>MasterVersionId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.</p>
<code>MigratedToFromArticleVersion</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the article's owner.</p>
<code>PublishStatus</code>	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The publication status for the article:</p> <ul style="list-style-type: none"> <li>• <code>Draft</code>: any draft articles.</li> <li>• <code>Online</code>: articles published in Salesforce Knowledge.</li> <li>• <code>Archived</code>: archived articles.</li> </ul> <p>A user must have the “Manage Articles” permission enabled to use <code>Online</code>.</p> <p>Article queries and searches in SOQL or SOSL require that you specify either the <code>PublishStatus</code> or the <code>Id</code> field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a <code>PublishStatus</code> of <code>Archived</code>, also check that <code>IsLatestVersion</code> equals <code>false</code> in your WHERE clause.</p>
SourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the source from which the article was created (Case or Reply).</p>
Summary	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Summary of the article. Maximum size is 1000 characters.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Required. Article's title. Maximum size is 255 characters.</p>
TranslationCompletedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<b>Description</b> Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.
TranslationExportedDate	<b>Type</b> dateTime <b>Properties</b> Filter, Nillable, Sort <b>Description</b> Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.
TranslationImportedDate	<b>Type</b> dateTime <b>Properties</b> Filter, Nillable, Sort <b>Description</b> Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.
UrlName	<b>Type</b> string <b>Properties</b> Filter, Group, idLookup, Sort <b>Description</b> Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.
ValidationStatus	<b>Type</b> picklist <b>Properties</b> Defaulted on create, Filter, Group <b>Description</b> Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code> . The default value is <code>Not Validated</code> . This field is available in API version 24.0 or later.
VersionNumber	<b>Type</b> int <b>Properties</b> Group, Sort

**Field Name****Details****Description**

The number assigned to a version of an article. This field is available in API version 24.0 and later.

## Usage

Use this object to query, retrieve, or search for articles across all types of articles depending on their version. You can update draft master articles. Also, you can delete articles that are not drafts. Client applications can use KnowledgeArticleVersion with `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` to return the category groups and the category structure associated with Salesforce Knowledge.

To access an article independent of its version, use the KnowledgeArticle object.

In Lightning Knowledge, the type of article is determined by the `RecordType` field on the concrete derived object (for example, [Knowledge\\_\\_kav](#) on page 1439). For Knowledge in Salesforce Classic, the type of article is determined by the `ArticleType` field and the concrete derived object uses the prefix of the article type name (for example, `FAQ__kav` for the FAQ article type).

## SOQL Samples

The following SOQL clause uses KnowledgeArticleVersion to query all published articles from all articles complying with the classification specified in the WITH DATA CATEGORY clause:

```
SELECT Title, Summary
FROM KnowledgeArticleVersion
WHERE PublishStatus='Online'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c ABOVE_OR_BELOW europe__c AND Product__c BELOW All__c
```

The following SOQL clause for Lightning Knowledge uses the `Offer` record type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Knowledge__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for Offer here>'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause for Salesforce Classic uses the `Offer` article type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Offer__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause uses KnowledgeArticleVersion to query the IDs of all archived versions of a particular article:

```
SELECT Id
FROM KnowledgeArticleVersion
WHERE PublishStatus='Archived'
```

```
AND IsLatestVersion=false
AND KnowledgeArticleId='kA1D00000001PQ6KAM'
```

## SOQL and SOSL with KnowledgeArticleVersion

- Filter on a single value of `PublishStatus` for best results. To find all versions of each article, omit the `PublishStatus` filter, but do filter on one or more primary key IDs. To retrieve all archived versions for a given article, specify a SOQL filter where `IsLatestVersion` is `false`.
- In API version 46.0 and earlier, queries without a filter on `PublishStatus` return published articles by default. In API version 47.0 and later, draft, published, and archived articles are returned when Lightning Knowledge is enabled.
- To support security, only users with the “View Draft Articles” permission see articles whose `PublishStatus` value is `Draft`. Similarly, only users with the “View Archived Articles” permission see articles whose `PublishStatus` value is `Archived`.
- Archived article versions are stored in the **Knowledge\_\_kav** object. To query archived article versions, specify the article `Id` and set `IsLatestVersion='0'`.
- You cannot use binding variables in Apex SOQL statements with KnowledgeArticleVersion objects. For example, the following SOQL statement causes a compilation error.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
List<Knowledge__kav> articles = [
  SELECT Id FROM Knowledge__kav
  WHERE PublishStatus = :PUBLISH_STATUS_ONLINE
];
```

Instead, use dynamic SOQL as follows. See [Dynamic SOQL](#) in *Apex Developer Guide*.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
final String q = 'SELECT Id, PublishStatus FROM Knowledge__kav
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE';
List<Knowledge__kav> articles = Database.query(q);
```

## Other Usage for SOQL and SOSL with KnowledgeArticleVersion

To expose the `migrated_to_from_id` on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticleVersion** in **KnowledgeArticleVersion**.

- For SOQL:
  - To filter by **MigratedToFromArticleVersion**, remove any other filters.
  - When filtering by **MigratedToFromArticleVersion**, use the '=' or 'IN' operator.
  - When filtering by **MigratedToFromArticleVersion**, the value can't be null or empty.
- SOSL doesn't support **MigratedToFromArticleVersion**.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**KnowledgeArticleVersionHistory**

History is available for tracked fields of the object.

SEE ALSO:

[KnowledgeArticle](#)

[KnowledgeArticleViewStat](#)

[KnowledgeArticleVoteStat](#)

## KnowledgeArticleVersionHistory

---

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

Knowledge\_\_VersionHistory is derived from this object. To access this derived object, [turn on field history tracking](#) for Knowledge objects.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

Knowledge must be enabled in your org. This object respects field, entity, and record-level security. You must have at least “Read” permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

### Fields

Field Name	Details
EventType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of event that is tracked in the history table.</p>
FieldName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Name of the tracked field.</p>

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>. Querying or searching articles in SOSL requires that you specify the <code>Language</code> field in the WHERE clause. The language must be the same for all article types.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The most recent value of the field before it was changed.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the article.</p>
ParentObjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of object that contains the field.</p>
VersionId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID assigned to a version of the article.</p>
VersionNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number assigned to a version of an article. This field is available in API version 24.0 and later.</p>

## Usage

Use this object to query events in the history of an article. For example, you can retrieve the number of edits a particular user has made to an article, how many times the article has been published, and so on.

## KnowledgeArticleViewStat

Provides statistics on the number of views for the specified article across all article types. This object is read-only and available in API version 20.0 and later.

Knowledge\_\_ViewStat is derived from this object.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its views. For more information on published article version, see the `PublishStatus` field in KnowledgeArticleVersion.

## Fields

Field Name	Details
Channel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The channel where the article is viewed:</p> <ul style="list-style-type: none"> <li>• <code>AllChannels</code> for article views across all channels.</li> <li>• <code>App</code> for the internal Salesforce Knowledge application.</li> <li>• <code>Pkb</code> for article views in public knowledge base.</li> <li>• <code>Csp</code> for Customer Portal.</li> <li>• <code>Prm</code> for article view in partner portal.</li> </ul>
<code>NormalizedScore</code>	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Article's weighted views in the selected channel. The article with most views has a score of 100. Other article views are then calculated relative to this highest view score. For example, if the best read article has 2000 views and another has 1000. The first one gets a score of 100 while the second gets 50.</p>
<code>ParentId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the viewed article. This corresponds to a KnowledgeArticle record.</p>
<code>ViewCount</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The number of unique views an article has received in the selected channel. An article with a high number of views may not always have a high normalized score. The normalized score for an article is calculated based on views over time, with more recent views earning a higher score. This field is available in API version 27.0 and later.</p>

## Usage

Use this object to query or retrieve statistics for article views.

Alternatively, client applications can use the article type `API Name` followed by `__ViewStat` to query or retrieve most viewed articles from a specific article type.

## SOQL Samples

The following SOQL clause uses KnowledgeArticleViewStat to query all the article views in Salesforce Knowledge and return the related articles:

```
SELECT Id, NormalizedScore, Parent.Id
      FROM KnowledgeArticleViewStat where Channel = 'App'
      ORDER BY NormalizedScore
```

Use the following clause to restrict your query to Offer articles for the Offer article type:

```
SELECT Id, NormalizedScore, Parent.Id
      FROM Offer__ViewStat where Channel = 'App'
      ORDER BY NormalizedScore
```

SEE ALSO:

- [KnowledgeArticle](#)
- [KnowledgeArticleVersion](#)
- [KnowledgeArticleVoteStat](#)

## KnowledgeArticleVoteStat

---

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

Knowledge\_\_VoteStat is derived from this object.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its votes. For more information on published article version, see the `PublishStatus` field in KnowledgeArticleVersion

## Fields

Field Name	Details
Channel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The channel where the article is rated:</p> <ul style="list-style-type: none"> <li>• <code>AllChannels</code> for article views across all channels.</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <code>App</code> for the internal Salesforce Knowledge application.</li> <li>• <code>Pkb</code> for article views in public knowledge base.</li> <li>• <code>Csp</code> for Customer Portal.</li> <li>• <code>Ppm</code> for article view in partner portal.</li> </ul>
<code>NormalizedScore</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Article's weighted score on a scale of 1 to 5. A higher score means more votes. Articles without recent votes trend towards an average rating of three stars.</p>
<code>ParentId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The rated article. This corresponds to a KnowledgeArticle record.</p>

## Usage

Use this object to query or retrieve the rating for an article.

Alternatively, client applications can use the article type `API Name` followed by `__VoteStat` to query or retrieve the rating for an article for a specific article type.

## SOQL Samples

See `KnowledgeArticleViewStat`.

## LandingPage

Represents a Pardot landing page that has been synced to Salesforce. A landing page is a web page that a visitor reaches after clicking a link or advertisement. This object is available in API version 42.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set.

## Fields

Field Name	Details
CampaignId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related campaign.</p>
FormErrorRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of errors made on the landing page form. Calculated as total errors divided by total views.</p>
FormSubmissionRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of form submissions based on the total number of landing page views.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Indicates when the current user last viewed a record related to this record.</p>

Field Name	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the landing page.</p>
TotalFormErrors	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times a visitor or prospect enters an invalid email address or leaves a required field blank on a landing page form.</p>
TotalFormSubmissions	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times a form on the landing page has been submitted.</p>
TotalTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times prospects clicked a link on the landing page's thank you page.</p>

Field Name	Details
TotalViews	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times visitors and prospects viewed your landing page. This total includes multiple views from the same person.</p>
UniqueFormErrors	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of individual visitors and prospects who made an error on the form. This metric doesn't include multiple errors from the same person.</p>
UniqueFormSubmissions	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of individual visitors who submitted a form on the landing page. This metric doesn't include multiple submissions from the same person.</p>
UniqueTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times a prospect clicked a link on the landing page's thank you page. This metric doesn't include multiple clicks of the same link.</p>
UniqueViews	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of individual visitors and prospects who viewed your landing page. This metric doesn't include multiple views from the same person.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### LandingPageFeed

Feed tracking is available for the object.

## Lead

---

Represents a prospect or lead.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
ActionCadenceAssigneeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the sales rep designated to work the lead through their assigned sales cadence. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
ActionCadenceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the lead's assigned sales cadence. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
ActivityMetricId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related activity metric. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>

Field	Details
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address. Read-only. For details on compound address fields, see <a href="#">Address Compound Fields</a>.</p>
AnnualRevenue	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Annual revenue for the lead's company.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the lead's address.</p>
CleanStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the record's clean status compared with Data.com. Values include: <code>Matched</code>, <code>Different</code>, <code>Acknowledged</code>, <code>NotFound</code>, <code>Inactive</code>, <code>Pending</code>, <code>SelectMatch</code>, or <code>Skipped</code>.</p> <p>Several values for <code>CleanStatus</code> appear with different labels on the lead record.</p> <ul style="list-style-type: none"> <li>• <code>Matched</code> appears as <code>In Sync</code></li> <li>• <code>Acknowledged</code> appears as <code>Reviewed</code></li> <li>• <code>Pending</code> appears as <code>Not Compared</code></li> </ul>
Company	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The lead's company.</p>

Field	Details
	<p> <b>Note:</b> If person account record types have been enabled, and if the value of <code>Company</code> is null, the lead converts to a person account.</p>
<code>CompanyDunsNumber</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Data Universal Numbering System (D-U-N-S) number, which is a unique, nine-digit number assigned to every business location in the Dun &amp; Bradstreet database that has a unique, separate, and distinct operation. Industries and companies use D-U-N-S numbers as a global standard for business identification and tracking. Maximum size is 9 characters.</p> <p> <b>Note:</b> This field is only available to organizations that use Data.com Prospector or Data.com Clean.</p>
<code>ConnectionReceivedId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the <code>PartnerNetworkConnection</code> that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
<code>ConnectionSentId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the <code>PartnerNetworkConnection</code> that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new <code>PartnerNetworkRecordConnection</code> object to forward records to connections.</p>
<code>ConvertedAccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Object reference ID that points to the account into which the lead converted.</p>
<code>ConvertedContactId</code>	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Object reference ID that points to the contact into which the lead converted.</p>
ConvertedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Date on which this lead was converted.</p>
ConvertedOpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Object reference ID that points to the opportunity into which the lead has been converted.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's country.</p>
CountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ISO country code for the lead's address.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The lead's description.</p>
Division	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> The lead's email address.</p>
EmailBouncedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> If bounce management is activated and an email sent to the lead bounced, the date and time of the bounce.</p>
EmailBouncedReason	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> If bounce management is activated and an email sent to the lead bounced, the reason for the bounce.</p>
Fax	<p><b>Type</b> phone</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's fax number.</p>
FirstCallDateTime	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time of the first call placed to the lead. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
FirstEmailDateTime	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time of the first email sent to the lead. This field is available in API version 48.0 if you enabled High Velocity Sales.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's first name up to 40 characters.</p>
HasOptedOutOfEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Update</p> <p><b>Description</b> Indicates whether the lead doesn't want to receive email from Salesforce (<code>true</code>) or does (<code>false</code>). Label is <b>Email Opt Out</b>.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Retrieve, Query, Restricted picklist, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Accuracy level of the geocode for the address. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
IndividualId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the data privacy record associated with this lead. This field is available if you enabled Data Protection and Privacy in Setup.</p>
Industry	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Industry in which the lead works.</p>
IsConverted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the lead has been converted (<code>true</code>) or not (<code>false</code>). Label is <b>Converted</b>.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
IsUnreadByOwner	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If true, lead has been assigned, but not yet viewed. See Unread Leads for more information. Label is <b>Unread By Owner</b>.</p>

Field	Details
Jigsaw	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> References the ID of a contact in Data.com. If a lead has a value in this field, it means that a contact was imported as a lead from Data.com. If the contact (converted to a lead) was not imported from Data.com, the field value is null. Maximum size is 20 characters. Available in API version 22.0 and later. Label is <b>Data.com Key</b>.</p> <p> <b>Important:</b> The Jigsawfield is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Do not modify the value in the Jigsaw field.</p>
LastActivityDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Value is the most recent of either:</p> <ul style="list-style-type: none"> <li>• Due date of the most recent event logged against the record.</li> <li>• Due date of the most recently closed task associated with the record.</li> </ul>
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. Last name of the lead up to 80 characters.</p>
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Latitude	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <math>-90</math> and <math>90</math> up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
Longitude	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <math>-180</math> and <math>180</math> up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
LeadSource	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The lead's source.</p>
MasterRecordId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>If this record was deleted as the result of a merge, this field contains the ID of the record that was kept. If this record was deleted for any other reason, or has not been deleted, the value is <code>null</code>.</p> <p> <b>Note:</b> When using Apex triggers to determine which record was deleted in a merge event, this field's value is the ID of the record that remains in <code>Trigger.old</code>. In <code>Trigger.new</code>, the value is <code>null</code>.</p>

Field	Details
MiddleName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's middle name up to 40 characters. To enable this field, ask Salesforce Customer Support for help.</p>
MobilePhone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's mobile phone number.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Concatenation of <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> up to 121 characters.</p>
NumberOfEmployees	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of employees at the lead's company. Label is <b>Employees</b>.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the lead's owner.</p>
PartnerAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p>

Field	Details
	<p><b>Description</b></p> <p>ID of the partner account for the partner user that owns this lead. Available if Partner Relationship Management is enabled or if Communities is enabled and you have partner portal licenses.</p> <p> <b>Note:</b> If you are uploading leads using API version 15.0 or earlier, and one of the leads in the batch has a partner user as the owner, the <code>Partner Account</code> field on all leads in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the <code>Partner Account</code> field is set to the appropriate account for the partner user that owns the lead. If the owner of the lead is not a partner user, this field remains empty.</p>
Phone	<p><b>Type</b></p> <p>phone</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The lead's phone number.</p>
PhotoUrl	<p><b>Type</b></p> <p>url</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Path to be combined with the URL of a Salesforce instance (<i>Example:</i> <code>https://yourInstance.salesforce.com/</code>) to generate a URL to request the social network profile image associated with the lead. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the lead.</p> <p>Empty if Social Accounts and Contacts isn't enabled or if Social Accounts and Contacts has been disabled for the requesting user.</p>
PostalCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Postal code for the address of the lead. Label is <b>Zip/Postal Code</b>.</p>
Rating	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Rating of the lead.</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> ID of the record type assigned to this object.</p>
Salutation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salutation for the lead.</p>
ScoreIntelligenceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the intelligent field record that contains lead score.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the address of the lead.</p>
StateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ISO state code for the lead's address.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b> Status code for this converted lead. Status codes are defined in <code>Status</code> and represented in the API by the <code>LeadStatus</code> object.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street number and name for the address of the lead.</p>
Suffix	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The lead's name suffix up to 40 characters. To enable this field, ask Salesforce Customer Support for help.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Title for the lead, such as CFO or CEO.</p>
Website	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Website for the lead.</p>

 **Note:** If you import lead data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

## Converted Leads

Leads have a special state to indicate that they have been converted into an account, a contact, and an opportunity. Your client application can convert leads via the `convertLead()` call. Users can also convert leads in Salesforce. After a lead has been converted, it is read-only. However, you can query converted lead records.

Leads have several fields that indicate their converted status. These special fields are set when converting the lead in the user interface.

- `ConvertedAccountId`
- `ConvertedContactId`
- `ConvertedDate`
- `ConvertedOpportunityId`
- `IsConverted`
- `Status`

 **Note:** If person account record types have been enabled, and if the value of `Company` is null, the lead converts to a person account.

## Unread Leads

Leads have a special state to indicate that they have not been viewed or edited by the lead owner. In Salesforce, this is helpful for users to know which leads have been assigned to them but which they have not touched yet. `IsUnreadByOwner` is `true` if the lead owner has not yet viewed or edited the lead, and `false` if the lead owner has viewed or edited the lead at least once.

## Lead Status Picklist

Each `Status` value corresponds to either a converted or unconverted status in the lead status picklist, as defined in the user interface. To obtain the lead status values in the picklist, a client application can query `LeadStatus`.

You can't convert a lead via the API by changing `Status` to one of the converted lead status values. When you convert qualified leads into an account, contact, and opportunity, you can select one of the converted status types for the lead. Leads with a converted status type are no longer available in the Leads tab, although you can include them in reports.

## Usage

To update a lead or to convert one with `convertLead()`, log in to your client application with the "Edit" permission on leads.

When you create, update, or upsert a lead, your client application can have the lead assigned to multiple user records based on assignment rules that have been configured in Salesforce.

To use this feature, your client application needs to set either of the following options (but not both) in the `AssignmentRuleHeader` used in create or update:

Field	Field Type	Details
<code>assignmentRuleId</code>	reference	ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and <code>useDefaultRule</code> is <code>true</code> , then the default assignment rule is used.  To find the ID for a given assignment rule, query the <code>AssignmentRule</code> object (specifying <code>RuleType="leadAssignment"</code> ), iterate through the returned <code>AssignmentRule</code> records, find the one you want to use, retrieve its ID, and then specify its ID in this field in the <code>AssignmentRuleHeader</code> .
<code>useDefaultRule</code>	boolean	Specifies whether to use the default rule for rule-based assignment ( <code>true</code> ) or not ( <code>false</code> ). Default rules are assigned in the user interface.

## Java Sample

The following Java sample shows how to automatically assign a newly created lead.

```
package wsc;

import com.sforce.soap.enterprise.Connector;
import com.sforce.soap.enterprise.EnterpriseConnection;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;
import com.sforce.soap.enterprise.subject.Lead;
import com.sforce.soap.enterprise.QueryResult;
import com.sforce.soap.enterprise.SaveResult;
import com.sforce.soap.enterprise.subject.SObject;

public class LeadAssignment {

    static final String USERNAME = "REPLACE USER NAME";
    static final String PASSWORD = "REPLACE PASSWORD";
    static EnterpriseConnection connection;

    static LeadAssignment _leadAssignment;

    // Main
    public static void main(String[] args)
    {
        // Establish connection and login
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);
        try {
            connection = Connector.newConnection(config);
            System.out.println("Logged in, endpoint: " + config.getAuthEndpoint());
        } catch (ConnectionException e1) {
            e1.printStackTrace();
        }

        // Create lead
        _leadAssignment = new LeadAssignment();
        try {
            _leadAssignment.CreateLead();
        } catch (Exception e) {
            e.printStackTrace();
        }

        // Logout
        try {
            connection.logout();
            System.out.println("Logged out");
        } catch (ConnectionException ce) {
            ce.printStackTrace();
        }
    }

    public void CreateLead() throws ConnectionException
```

```

{
    // Create a new Lead and assign various properties
    Lead lead = new Lead();

    lead.setFirstName("Joe");
    lead.setLastName("Smith");
    lead.setCompany("ABC Corporation");
    lead.setLeadSource("API");
    // The lead assignment rule will assign any new leads that
    // have "API" as the LeadSource to a particular user

    // In this sample we will look for a particular rule and if found
    // use the id for the lead assignment. If it is not found we will
    // instruct the call to use the current default rule. You can't use
    // both of these values together.
    QueryResult qr = connection.query("SELECT Id FROM AssignmentRule WHERE Name = " +
                                     "'Mass Mail Campaign' AND SubjectType = 'Lead'");
    if (qr.getSize() == 0) {
        connection.setAssignmentRuleHeader(null, true);
    } else {
        connection.setAssignmentRuleHeader(qr.getRecords()[0].getId(), false);
    }

    }

    // This call effectively removes the header, the next lead will
    // be assigned to the default lead owner.
    connection.clearAssignmentRuleHeader();
}
}

```

## C# Sample

The following C# sample shows how to automatically assign a newly created lead.

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.ServiceModel;

```

```
using LeadSample.sforce;

namespace LeadSample
{
    class LeadAssignment
    {
        private static SoapClient client;
        private static SoapClient apiClient;
        private static SessionHeader header;
        private static LoginResult loginResult;
        private static readonly string Username = "REPLACE USERNAME";
        private static readonly string Password = "REPLACE PASSWORD AND SECURITY TOKEN";

        // Create the proxy binding and login
        private LeadAssignment()
        {
            client = new SoapClient();

            try
            {
                loginResult = client.login(null, Username, Password);
            }
            catch (Exception e)
            {

## LeadCleanInfo

---

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

Lead Clean Info provides a snapshot of the data in your Salesforce lead record and its matched Data.com record at the time the Salesforce record was cleaned.

Lead Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentTitle` field. If the `IsDifferentTitle` field's value is `False`, that means the `Title` field value is *the same* on the Salesforce lead record and its matched Data.com record.

LeadCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the lead record.
- `IsDifferent` indicates whether or not a field on the lead record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the lead record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the lead record is in a `Reviewed` state, which means that the value was reviewed but not accepted..

Their individual bits are defined here

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
AnnualRevenue	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Estimated annual revenue of the lead.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> Details for the billing address of the lead.</p>
CleanedByJob	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates whether the lead record was cleaned by a Data.com Clean job (<code>true</code>) or not (<code>false</code>).</p>
CleanedByUser	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates whether the lead record was cleaned by a Salesforce user (<code>true</code>) or not (<code>false</code>).</p>
CompanyDunsNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun &amp; Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.</p>
CompanyName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the company.</p>
ContactStatusDataDotCom	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

**Field Name****Details****Description**

The status of the contact associated with the lead per Data.com. Values are: Contact is Active per Data.com, Phone is Wrong per Data.com , Email is Wrong per Data.com, Phone and Email are Wrong per Data.com, Contact Not at Company per Data.com, Contact is Inactive per Data.com, Company this contact belongs to is out of business per Data.com, Company this contact belongs to never existed per Data.com or Email address is invalid per Data.com.

Country

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

Details for the billing address of the lead.

DandBCompanyDunsNumber

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

The D-U-N-S Number on the D&B Company record (if any) that is linked to the lead.

DataDotComCompanyId

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

The ID Data.com maintains for the company associated with the lead.

DataDotComId

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

The ID Data.com maintains for the contact associated with the lead.

Email

**Type**

email

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The lead's email address.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The lead's first name.</p>
Industry	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The industry the lead belongs to.</p>
IsDifferentAnnualRevenue	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates whether the lead's AnnualRevenue field value is different from the corresponding value on its matched Data.com record (true) or not (false).</p>
IsDifferentCity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates whether the lead's City field value is different from the corresponding value on its matched Data.com record (true) or not (false).</p>
IsDifferentCompanyDunsNumber	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCompanyName</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether the lead's <code>Company Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCountry</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether the lead's <code>Country</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentCountryCode</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether the account's <code>Country Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentDandBCompanyDunsNumber</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether the lead's <code>D&amp;B Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).</p>
<code>IsDifferentEmail</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p>

Field Name	Details

<code>LastMatchedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The date the lead record was last matched and linked to a Data.com record.</p>
<code>LastName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The lead's last name.</p>
<code>LastStatusChangedById</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of who or what last changed the record's <code>Clean Status</code> field value: a Salesforce user or a Clean job.</p>

Field Name	Details
LastStatusChangedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date on which the record's <code>Clean Status</code> field value was last changed.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of a billing address. Data not currently provided.</p>
LeadId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique, system-generated ID assigned when the lead record was created.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of a billing address. Data not currently provided.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> Field label is <b>Lead Clean Info Name</b>. The name of the lead. Maximum size is 255 characters.</p>
NumberOfEmployees	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The number of employees working at the lead.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The phone number for the lead.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address of the lead.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address of the lead.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address of the lead.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The lead's title.</p>

## Usage

Developers can create triggers that read the Lead Clean Info fields to help automate the cleaning or related processing of lead records.

# LeadOwnerSharingRule

---

Represents the rules for sharing a lead with users other than the owner.

**Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.  This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the source group. Leads owned by users in the source group trigger the rule to give access.</p>
LeadAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the target user or group. The target user or group is being given access.</p>

## Usage

Use these objects to manage the sharing rules for leads. General sharing and Territory-related sharing use this object.

**Note:** The original territory management feature is scheduled for retirement for all customers as of Summer '21. After the feature is retired, users can't access the original territory management feature and its underlying data. We encourage you to migrate to Enterprise Territory Management. We also strongly recommend that you keep a comprehensive backup of your territory data while you're still using the original territory management feature. For more information, see [The Original Territory Management Module](#)

[Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

## LeadShare

---

Represents a sharing entry on a Lead.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

As of Summer '20 and later, only users with access to the Lead object can access this object.

### Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>IsDeleted</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
<code>LeadAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the User or Group has to the Lead. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>Edit</code></li> <li>• <code>All</code> This value is not valid when creating or updating these records.</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for leads.</p>
<code>LeadId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the Lead associated with this sharing entry. This field can't be updated.</p>
<code>RowCause</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists. You can only write a value in this field when its value is either omitted or set to <code>Manual</code> (default). You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Values include:</p> <ul style="list-style-type: none"> <li>• <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the Lead with them.</li> <li>• <code>Owner</code>—The User is the owner of the Lead.</li> <li>• <code>Rule</code>—The User or Group has access via a Lead sharing rule.</li> </ul>
<code>UserOrGroupId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the User or Group that has been given access to the Lead. This field can't be updated.</p>

## Usage

This object allows you to determine which users and groups can view or edit leads owned by other users.

If you attempt to create a record that matches an existing record, the existing record is returned.

## LeadStatus

---

Represents the status of a Lead, such as Open, Qualified, or Converted.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Fields

Field	Details
<code>ApiName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
<code>IsConverted</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this lead status value represents a converted lead (<code>true</code>) or not (<code>false</code>). Multiple lead status values can represent a converted lead.</p>
<code>IsDefault</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this is the default lead status value (<code>true</code>) or not (<code>false</code>) in the picklist.</p>

Field	Details
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this lead status value. This display value is the internal label that does not get translated.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number used to sort this value in the lead status picklist. These numbers are not guaranteed to be sequential, as some previous lead status values might have been deleted.</p>

## Usage

This object represents a value in the lead status picklist (see Lead Status Picklist). The lead status picklist provides additional information about the status of a Lead, such as whether a given status value represents a converted Lead. Query this object to retrieve the set of values in the lead status picklist, and then use that information while processing Lead objects to determine more information about a given lead. For example, the application could test whether a given lead is converted based on its `Status` value and the value of the `IsConverted` property in the associated LeadStatus record.

[LeadOwnerSharingRule](#)

[LeadShare](#)

## LeadTag

Associates a word or short phrase with a Lead.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the tagged item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist</p> <p><b>Description</b> Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

LeadTag stores the relationship between its parent TagDefinition and the Lead being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

## LegalEntity

---

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
CompanyName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the company that this legal entity represents.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The description of the legal entity.</p>
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LegalEntityAddress	<p><b>Type</b></p> <p>address</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>The address of the company that this legal entity represents. This is a compound field of type Address and combines these fields: LegalEntityCity, LegalEntityCountry, LegalEntityGeocodeAccuracy, LegalEntityLatitude, LegalEntityLongitude, LegalEntityPostalCode, LegalEntityState, and LegalEntityStreet. For more information, see <a href="#">Address Compound Fields</a>.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>The name of the legal entity.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the record owner.</p>
Status	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The status of the legal entity.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### LegalEntityFeed

Feed tracking is available for the object.

### LegalEntityHistory

History is available for tracked fields of the object.

### LegalEntityOwnerSharingRule

Sharing rules are available for the object.

### LegalEntityShare

Sharing is available for the object.

## LightningExperienceTheme

---

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
DefaultBrandingSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the default branding set.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The description of the theme. Limit: 1,000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

**Field****Details****Description**

The unique name of the theme in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the theme name in the user interface. Limit: 70 characters.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

**Language****Type**

picklist

**Properties**

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

**Description**

Required. Language of the label. Possible values are:

- `da` (Danish)
- `de` (German)
- `en_US` (English)
- `es` (Spanish)
- `es_MX` (Spanish - Mexico)
- `fi` (Finnish)
- `fr` (French)
- `it` (Italian)
- `ja` (Japanese)
- `ko` (Korean)
- `nl_NL` (Dutch)
- `no` (Norwegian)
- `pt_BR` (Portuguese (Brazil))
- `ru` (Russian)
- `sv` (Swedish)
- `th` (Thai)
- `zh_CN` (Chinese - Simplified)
- `zh_TW` (Chinese - Traditional)

**MasterLabel****Type**

string

**Properties**

Create, Filter, Group, Sort, Update

Field	Details
	<p><b>Description</b> Required. The name of the theme. Specify up to 70 characters.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b>namespacePrefix__componentName</b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ShouldOverrideLoadingImage	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether a custom image overrides the Salesforce loading image (<code>true</code>) or not (<code>false</code>).</p>

## LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

See [Switch to Salesforce Classic Feedback Form](#) in Salesforce Help for more details.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
CollaborationGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the Chatter Group where the user feedback is posted.</p>
CustomQuestion	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Text of the custom question added by the admin. Maximum of 1,000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
FeedbackFormDaysFrequency	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of days between showing the feedback form when a user switches. A value of 0 indicates that the form is shown for every switch. Maximum of 30.</p>
IsCustom	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates if a feedback form includes a custom question <code>yes</code> or not <code>no</code>.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the language used in the org where the feedback form was created.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label for the prompt. Maximum of 80 characters.</p>
PromptDelayTime	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the amount of time in seconds to delay between instances of all prompts, both org- and Salesforce-created. Minimum of 0 hours and 0 minutes. Maximum of 99 hours and 59 minutes.</p>
SendFeedbackToSalesforce	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates if the user feedback can be shared with Salesforce. If <code>yes</code>, share the feedback with Salesforce. If <code>no</code>, the feedback is only shared in the Chatter Group chosen when customizing the form. The default value is <code>false</code>.</p>

## LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

Field Name	Details
Action	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> User switched from Lightning Experience to Salesforce Classic or from Salesforce Classic to Lightning Experience.</p>
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user switched.</p>
RecordCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number of user switches.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> UserId of user who switched.</p>

## LightningUsageByAppTypeMetrics

---

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

Not available in sandbox orgs.

### Fields

Field Name	Details
AppExperience	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> User's app (Lightning Experience or Salesforce Mobile).</p>
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user accessed Lightning Experience or Salesforce Mobile.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> UserId for user accessing Lightning Experience or Salesforce Mobile.</p>

## LightningUsageByBrowserMetrics

---

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

Field Name	Details
Browser	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Browser used to access Lightning Experience.</p>
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user accessed Lightning Experience.</p>
PageName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Page user viewed in Lightning Experience.</p>
TotalCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of pages accessed in Lightning Experience.</p>

## LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

Field Name	Details
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user viewed page in Lightning Experience.</p>
PageName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of page user viewed.</p>
TotalCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of pages viewed.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Userid of user who viewed page.</p>

## LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

Field Name	Details
FlexiPageNameOrId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name or Id of custom page user viewed in Lightning Experience.</p>
FlexiPageType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Custom page type.</p>
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user viewed page in Lightning Experience.</p>
TotalCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of custom pages viewed.</p>

# LightningExitByPageMetrics

---

.Represents standard pages users switched from Lightning Experience to Salesforce most frequently. This object is available in API version 44.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Not available in sandbox orgs.

## Fields

Field Name	Details
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date user viewed page in Lightning Experience.</p>
PageName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of page user viewed.</p>
RecordCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total number of pages where the switch occurred.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Userid of user who viewed page.</p>

## LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Knowledge must be enabled in your org. Field Service Lightning must be enabled. Only users that have access to the Knowledge article and the parent record linked to it can access this object.

## Fields

Field Name	Details
CurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
KnowledgeArticleId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the Knowledge article attached to the record. The label in the user interface is Knowledge Article ID.</p>
KnowledgeArticleVersionId	<p><b>Type</b></p> <p>reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The version of the Knowledge article attached to the record. This field lists the title of the attached version and links to the version. The label in the user interface is Article Version.</p> <p>When you attach an article to a work order, that version of the article stays associated with the work order, even if later versions are published. If needed, you can detach and reattach an article to a work order to link the latest version.</p>
LinkedEntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the record that the Knowledge article is attached to. The label in the user interface is Linked Record ID.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The title of the article. The label in the user interface is Article Title.</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the article's record type, if used. This field is only available for Lightning Knowledge.</p>
Type	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The type of record that the Knowledge article is attached to. For example, work order. The label in the user interface is Linked Object Type.</p>

## Usage

Admins can customize linked articles' page layouts, fields, validation rules, and more from the Linked Articles page in Setup.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [LinkedArticleFeed](#)

Feed tracking is available for the object.

### [LinkedArticleHistory](#)

History is available for tracked fields of the object.

## LinkedArticleFeed

---

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 1246.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Knowledge must be enabled in your org.

## Fields

Field	Details
<code>BestCommentId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the comment marked as best answer on a question post.</p>
<code>Body</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>&lt;ul&gt;</code></li> <li>• <code>&lt;ol&gt;</code></li> <li>• <code>&lt;li&gt;</code></li> <li>• <code>&lt;img&gt;</code></li> </ul> <p>The <code>&lt;img&gt;</code> tag is accessible only via the API and must reference files in Salesforce similar to this example: <code>&lt;img src="sfdc://069B0000000omjh"&gt;&lt;/img&gt;</code></p> <p> <b>Note:</b> In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of likes associated with this feed item.</p>
LinkUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The URL of a <code>LinkPost</code>.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b></p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code>. This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code>.</p> <p>For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code>.</p>

Field	Details
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code>.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, and <code>TextPost</code>, don't create feed items of other types directly from the API.</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a <code>Task</code> associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or <code>Event</code> associated with a case record (excluding email and call logging).  For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence.</li> <li>• <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.</li> <li>• <code>AnnouncementPost</code>—Not used.</li> <li>• <code>ApprovalPost</code>—generated when a user submits an approval.</li> <li>• <code>BasicTemplateFeedItem</code>—Not used.</li> <li>• <code>CanvasPost</code>—a post made by a canvas app posted on a feed.</li> <li>• <code>CollaborationGroupCreated</code>—generated when a user creates a public group.</li> <li>• <code>CollaborationGroupUnarchived</code>—Not used.</li> <li>• <code>ContentPost</code>—a post with an attached file.</li> <li>• <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher.</li> <li>• <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold.</li> <li>• <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed.</li> <li>• <code>LinkPost</code>—a post with an attached URL.</li> <li>• <code>PollPost</code>—a poll posted on a feed.</li> <li>• <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>QuestionPost</code>—generated when a user posts a question.</li> <li>• <code>ReplyPost</code>—generated when Chatter Answers posts a reply.</li> <li>• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC.</li> <li>• <code>TextPost</code>—a direct text entry on a feed.</li> <li>• <code>TrackedChange</code>—a change or group of changes to a tracked field.</li> <li>• <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated.</li> </ul> <p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>:</p> <ul style="list-style-type: none"> <li>• <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case.</li> <li>• <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.</li> <li>• <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object.</li> <li>• <code>ChangeStatusPost</code>—generated event when a user changes the status of a case.</li> <li>• <code>ChatTranscriptPost</code>—generated event when Chat transcript is saved to a case.</li> <li>• <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received.</li> <li>• <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated.</li> <li>• <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status.</li> <li>• <code>SocialPost</code>—generated when a social post is created from a case.</li> </ul> <p> <b>Note:</b> If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

## LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

Knowledge must be enabled in your org.

## Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
LinkedArticleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the tracked linked article. The history is displayed on the detail page for this record.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The value of the field before it was changed.</p>

## ListEmail

---

Represents a list email sent from Salesforce, or sent from Pardot and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients who are actually sent any given list email. Has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
CampaignId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the related campaign. This field is available in API version 42.0 and later.</p>
ClickThroughRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
ClickToOpenRatio	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The number of unique clicks divided by unique HTML opens. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>

Field	Details
DeliveryRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
FromAddress	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Read-only except when list email is in draft state. Validated against user's addresses.</p>
FromName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Read-only except when list email is in draft state. Validated against user's addresses. This field is null for emails sent from Pardot.</p>
HasAttachment	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Defaulted on create and update. Value is <code>true</code> if the list email has an attachment. This field is null for emails sent from Pardot.</p>
HtmlBody	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The body of the list email. This field is null for emails sent from Pardot.</p>

Field	Details
IsTracked	<p><b>Type</b> boolean</p> <p><b>Properties</b> Default on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if email tracking was on when the list email was sent. This field is blank for emails sent from Pardot and synced to Salesforce. This field is null for emails sent from Pardot.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when the current user last viewed a record that is related to this list email. This field is null for emails sent from Pardot.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. This field is null for emails sent from Pardot.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Read-only except when list email is in draft state.</p>
OpenRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces).  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>

Field	Details
OptOutRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of users that have opted out compared to the total number of emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> References Group and User. This field is null for emails sent from Pardot.</p>
ProgramName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable</p> <p><b>Description</b> The name of an Engagement Studio program where an automated email originates. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
ScheduledDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read-only. If null and <code>Status</code> is set to Scheduled, defaults to created time.</p>
SentVia	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Indicates whether the email was sent from Salesforce or Pardot. The allowed values are "Salesforce" or "Pardot".</p>

Field	Details
	<p>This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
SpamComplaintRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of spam complaints compared to the total number emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Read-only except when list email is in draft state. Changing the status to Scheduled causes the list email to be sent. Valid values:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Scheduled</li> <li>• Sent</li> <li>• Limit Error</li> <li>• Canceled</li> </ul>
Subject	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Read-only except when list email is in draft state. This field is null for emails sent from Pardot.</p>
TextBody	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Read-only except when list email is in draft state. This field is null for emails sent from Pardot.</p>

Field	Details
TotalDelivered	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalHardBounced	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalOpens	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) do not display images by default. Pardot counts an open each time the images load.  This field is available in API version 41.0 and later. To access this field, users need the High Velocity Sales User permission set or your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalSent	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Read-only. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.</p>
TotalSoftBounced	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be deliverable at another time. After 5 soft bounces, Pardot opts the prospect out of emails.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalSpamComplaints	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of prospects that reported the email as spam.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
TotalTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times prospects clicked a link in the email.  This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist</p> <p><b>Description</b> The type of email sent: list email or automated email. Reserved for future use.</p>

Field	Details
	This field is available in API version 46.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.
UniqueClickThroughRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of visitors who clicked a link contained in an email. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueOpens	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient only one time, even if the prospect loaded images more than once. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueOptOuts	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique opt-outs is the total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. They are removed from future email sends. This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.</p>
UniqueTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link.</p>

Field	Details
	This field is available in API version 41.0 and later. To access this field, your org must use Pardot and users need the CRM User or Sales User permission set.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ListEmailOwnerSharingRule

Sharing rules are available for the object.

### ListEmailShare

Sharing is available for the object.

## ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Possible values are:</p> <ul style="list-style-type: none"> <li>EUR (Euro)</li> <li>INR (Indian Rupee)</li> <li>USD (US Dollars)</li> </ul>
ListEmailId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The related list email record. Required on record creation; read-only otherwise.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>The auto-generated name of the list email recipient source.</p>
RecipientId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>the contact, lead, person account, or campaign member ID of the individual list email recipient.</p>

## Usage

## ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

## Supported Calls

`create()`, `delete()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
ListEmailId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create</p> <p>Filter</p>

Field	Details
	<p>Group</p> <p>Sort</p> <p><b>Description</b> The related list email record. Required on record creation; read-only otherwise.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber Defaulted on create Filter idLookup Sort</p> <p><b>Description</b> The auto-generated name of the list email recipient source.</p>
SourceListId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create Filter Group Sort Update</p> <p><b>Description</b> Required. The id of a list view to send the list email to. Read-only except when list email is in draft state.</p>
SourceType	<p><b>Type</b> reference</p> <p><b>Properties</b> Create Filter Group Restricted picklist Sort Update</p> <p><b>Description</b> Required. Read-only except when list email is in draft state.</p>

Field	Details
	Valid values: <ul style="list-style-type: none"> <li>• Include</li> </ul>

## ListView

Represents a list view. A list view specifies a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Fields

Name	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The fully qualified developer name of the list view.</p>
IsSqlCompatible	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Whether the list view can be used with SOQL..</p>
LastModifiedBy	<p><b>Type</b> User</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The name of the user who last modified the list view.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p>

Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the list view was last referenced, with a precision of one second.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the list view was last viewed, with a precision of one second.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the list view.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace of the list view.</p>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The API name of the sObject for the list view.</p>

## ListViewChart

---

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Name	Description
AggregateField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update</p> <p><b>Description</b> The field that's used for calculating data on each group. <code>AggregateField</code> can't be the same as <code>GroupingField</code>.</p>
AggregateType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update</p> <p><b>Description</b> The type of calculations to run on each group. The supported <code>AggregateType</code> values are <code>Count</code>, <code>Sum</code>, and <code>Avg</code>.</p>
ChartType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update</p> <p><b>Description</b> The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Query, Retrieve, Sort, Update</p> <p><b>Description</b> The fully qualified developer name of the chart.</p>
GroupingField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update</p> <p><b>Description</b> The field that's used to divide the data into collections. The field has to be supported by SQL <code>GROUP BY</code> functionality. <code>GroupingField</code> can't be the same as <code>AggregateField</code>.</p>

Name	Description
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the <code>MasterLabel</code>.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Query, Retrieve, Sort, Update</p> <p><b>Description</b> The label for the chart.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Query, Retrieve, Sort, Update</p> <p><b>Description</b> The ID of the user who owns the chart.</p>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort</p> <p><b>Description</b> The API name of the <code>sObject</code> for the chart.</p>

## ListViewChartInstance

---

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

### Supported Calls

`describeSObjects()`, `query()`

## Fields

Field Name	Details
AggregateField	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The field that's used for calculating data on each group. AggregateField can't be the same as GroupingField.</p>
AggregateType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of calculations to run on each group. The supported AggregateType values are Count, Sum, and Avg.</p>
ChartType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.</p>
DataQuery	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The SOQL query that can be executed to fetch the data for drawing a chart.</p>
DataQueryWithoutUserFilters	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The SOQL query that can be executed to fetch the data for drawing a chart, without user filters.  Available in API v43.0 and later.</p>

Field Name	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> API name of the chart. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
ExternalId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Reserved for future use.</p>
GroupingField	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The field that's used to divide the data into collections. The field has to be supported by SOQL GROUP BY functionality. GroupingField can't be the same as AggregateField.</p>
IsDeletable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if the chart can be deleted.</p>
IsEditable	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if the chart can be edited. Standard charts are not editable.</p>
IsLastViewed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if a chart is the last viewed by a user.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The display name of the chart.</p>
ListViewChartId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the chart created by a user. For standard charts, this is null.</p>
ListViewContextId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the list view in context of which the chart is generated. Required to query <code>ListViewChartInstance</code>.</p>
SourceEntity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> API name of the entity to which the chart is related. Required to query <code>ListViewChartInstance</code>.</p>

## Usage

### Example 1. Retrieve all custom and standard charts for Account entity for All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextId='00BR0000000U8Hr'
```

### Example 2. Retrieve metadata for a specific custom chart by ID for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextID='00BR0000000U8Hr' and ListViewChartId='0DdR00000004CBxKAM'
```

### Example 3. Retrieve metadata for a specific standard chart by its developer name for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextID='00BR0000000U8Hr' and DeveloperName='AccountsByIndustry'
```

## LiveAgentSession

---

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

 **Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

## Fields

Field Name	Details
AgentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the agent associated with the session.</p>

Field Name	Details
ChatReqAssigned	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of chat requests that were assigned to an agent during a session.</p>
ChatReqDeclined	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of chat requests that were declined by an agent during a session.</p>
ChatReqEngaged	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of chats in which an agent was engaged during a session.</p>
ChatReqTimedOut	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of chat requests that timed out in an agent's queue during a session.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the session record was last referenced.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the session record was last viewed.</p>

Field Name	Details
LoginTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time an agent logged in during the session.</p>
LogoutTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time an agent logged out during a session.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookupSort</p> <p><b>Description</b> The name of the session.</p>
NumFlagLoweredAgent	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of assistance flags lowered by the agent.</p>
NumFlagLoweredSupervisor	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of assistance flags lowered by the supervisor.</p>
NumFlagRaised	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of assistance flags raised by the agent.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the session record.</p>
TimeAtCapacity	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The amount of time an agent spent with the maximum number of chats in his or her queue.</p>
TimeIdle	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The amount of time an agent spent idle during the session.</p>
TimeInAwayStatus	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The amount of time an agent spent with a status of "Away" during a session.</p>
TimeInChats	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The amount of time an agent spent engaged in chats during a session.</p>
TimeInOnlineStatus	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The amount of time an agent spent with a status of "Online" during a session.</p>

## Usage

Use this object to query and manage chat session records.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### LiveAgentSessionHistory

History is available for tracked fields of the object.

### LiveAgentSessionOwnerSharingRule

Sharing rules are available for the object.

### LiveAgentSessionShare

Sharing is available for the object.

## LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

 **Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
Data Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Data type of the field that was changed.</p>
Field	<p><b>Type</b></p> <p>picklist</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed in a session record.</p>
LiveAgentSessionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the session record that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The original value of the field that was changed.</p>

## Usage

Use this object to identify changes to chat session records.

## LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

**Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the User or Group has to the LiveAgentSession. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All (This value is not valid for <code>create()</code> or <code>update()</code> calls.)</li> </ul> <p>This value must be set to an access level that is higher than the organization's default access level for chat transcripts.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the parent object, if any.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Values can include:</p> <ul style="list-style-type: none"> <li>• Manual—The user or group has access because a user with "All" access manually shared the LiveAgentSession with them.</li> <li>• Owner—The user is the owner of the LiveAgentSession or is in a role above the QuickText owner in the role hierarchy.</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

**Field Name****Details****Description**

ID of the user or group that has been given access to the LiveAgentSession.

## Usage

This object lets you determine which users and groups can view and edit LiveAgentSession records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

## LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Fields

**Field Name****Details**

Description

**Type**

string

**Properties**

Create, Nullable

**Description**

The description of the blocking rule—for example, the reason why the given IP address or range of addresses is being banned from starting new chats.

DeveloperName

**Type**

string

**Properties**

Create, Filter, Group, Sort

**Description**

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the

Field Name	Details
	<p>object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
FromIpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The IP address of the user that you want to block, or the beginning of the range of IP addresses you want to block. If you want to block a range of IP addresses, indicate the end of the range in the <code>ToIpAddress</code> field. If you don't indicate an IP address in the <code>ToIpAddress</code> field, the only IP address that will be blocked is the IP address in the <code>FromIpAddress</code> field.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the blocking rule.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Label for the blocking rule.</p>
ToIpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Optional) The end of the range of IP addresses that you want to block. The range begins with and includes the IP address in the <code>FromIpAddress</code> field, and it ends with and includes the IP address in the <code>ToIpAddress</code> field.</p>

## Usage

Use this object to query and manage rules for blocking customers from starting new chats with agents.

## LiveChatButton

---

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

## Fields

Field Name	Details
<code>Animation</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of animation used when an automated chat invitation appears on-screen. For automated chat invitations only. Available in API version 29.0 and later.</p>
<code>AutoGreeting</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The text that is automatically sent from an agent to a visitor when a chat session starts.</p> <p> <b>Note:</b> A greeting message in the <code>AutoGreeting</code> field of the <code>LiveChatButton</code> object overrides individual users' greeting messages in the <code>AutoGreeting</code> field in the <code>LiveChatUserConfig</code> object.</p>
<code>ChasitorIdleTimeout</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The amount of time a customer has to respond to an agent message before the chat times out.</p>

Field Name	Details
ChasitorIdleTimeoutWarning	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The amount of time a customer has to respond to an agent message before a warning appears and a timer begins a countdown. This value must be shorter than the <code>ChasitorIdleTimeout</code> value (we recommend at least 30 seconds shorter).</p>
ChatPageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the custom Visualforce page that contains the custom chat window code.</p>
CustomAgentName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The custom name of the agent associated with the button. Available in API version 29.0 and later.</p> <p> <b>Note:</b> A custom agent name in the <code>CustomAgentName</code> field of the <code>LiveChatButton</code> object overrides individual users' custom agent name in the <code>CustomAgentName</code> field in the <code>LiveChatUserConfig</code> object.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>

Field Name	Details
	<p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
HasQueue	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Determines whether to allow incoming chat requests to queue until an agent is available.</p>
InviteEndPosition	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The position on-screen where an automated chat invitation's animation ends.</p> <p> <b>Note:</b> You don't need to select an end position for your automated chat invitation if you use a custom animation.</p> <p>For automated chat invitations only. Available in API version 29.0 and later.</p>
InviteImageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the static image resource displayed on your automated chat invitation. For automated chat invitations only. Available in API version 29.0 and later.</p>
InviteStartPosition	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The position on-screen where an automated chat invitation's animation begins.</p> <p> <b>Note:</b> You don't need to select a start position for your automated chat invitation if you use a custom animation.</p> <p>For automated chat invitations only. Available in API version 29.0 and later.</p>

Field Name	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> For automated chat invitations, specifies whether an automated chat invitation is active and able to be sent to customers (<code>true</code>) or not (<code>false</code>). For chat buttons, this is set to <code>true</code> by default.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the chat.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Label for the chat button.</p>
NumberOfReroutingAttempts	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Specifies the number of times a chat request can be rerouted to available agents if all agents reject the chat request.</p>
OfflineImageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the static image resource that is displayed when the button is offline (inactive).</p>
OnlineImageId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the static image resource that is displayed when the button is online (active).</p>
OptionsHasChasitorIdleTimeout	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether Customer Time-Out is enabled.</p>
OptionsHasInviteAfterAccept	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an automated chat invitation can be sent to a customer after that customer has accepted a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OptionsHasInviteAfterReject	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an automated chat invitation can be sent to a customer after that customer has rejected a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OptionsHasRerouteDeclinedRequest	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether a chat request that has been rejected by all available agents should be rerouted to available agents again (<code>true</code>) or not <code>false</code>.</p>

Field Name	Details
OptionsIsAutoAccept	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether a chat request should be automatically accepted by the agent it's assigned to (<code>true</code>) or not (<code>false</code>). For chat buttons and automated chat invitations with <code>RoutingType</code> set to <code>Most Available</code> or <code>Least Active</code>. Available in API version 30.0 and later.</p>
OptionsIsInviteAutoRemove	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an automated chat invitation should be automatically removed from the screen after a certain amount of time (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.</p>
OverallQueueLength	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The maximum number of chat requests allowed to queue.</p>
PerAgentQueueLength	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The maximum number of chat requests allowed to queue for each agent with the required skill.</p>
PostchatPageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the custom Visualforce page displayed when the chat ends.</p>

Field Name	Details
PostchatUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL the user is directed to after the chat ends.</p>
PrechatFormPageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the custom Visualforce page displayed before the chat begins.</p>
PrechatFormUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL the user is directed to before the chat begins.</p>
PushTimeout	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of seconds an agent has to answer a chat request before it's routed to the next available agent.</p>
QueueId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the queue used for this chat button.</p>
RoutingConfigurationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The record ID of the routing configuration used for this chat button.</p>
RoutingType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>How chat requests are routed to agents. The values are:</p> <ul style="list-style-type: none"> <li>• <b>Choice</b>—Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill.</li> <li>• <b>Least Active</b>—Incoming chats are routed to the agent with the required skill who has the fewest active chats.</li> <li>• <b>Most Available</b>—Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B.</li> <li>• <b>Omni</b>—Incoming chats are routed using Omni-Channel queues.</li> </ul>
SiteId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The record ID of the site used for loading static resources and custom Visualforce pages.</p>
SkillId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The record ID of the skill used to route incoming chat requests. To associate multiple skills with a chat button, reference one skill in the <code>SkillId</code> field and use LiveChatButtonSkill junction objects for the remaining skills.</p>
TimeToRemoveInvite	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The number of seconds an automated invitation stays on-screen before it is automatically removed. For automated chat invitations only. Available in API version 29.0 and later.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The type of element to display to customers (either a chat button or an automated invitation).</p>
WindowLanguage	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The language used for standard chat windows. Custom chat windows use the language of the user's browser.</p>

## Usage

Use this object to query and manage chat buttons and automated chat invitations.

## LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Fields

Field Name	Details
ButtonId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b> The ID of the automated invitation associated with the deployment.</p>
DeploymentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the deployment that will feature the automated invitation.</p>

## Usage

Use this object to associate automated chat invitations with specific deployments.

## LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

## Supported Calls

`create()`, `delete()`, `update()`, `query()`

## Fields

Field Name	Details
ButtonID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The record ID of the button.</p>
SkillID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the skill.</p>

## Usage

Use this object to assign a specific skill to a specific button for multi-skill routing. For example:

```
String myButtonId = "button_Id";
String myButtonDevName = "button_DeveloperName";
List<String> skillIds = new List<String>();

//Get one skill ID from button
for(LiveChatButton lcb : [SELECT SkillId FROM LiveChatButton WHERE DeveloperName =:
myButtonDevName]) {
    skillIds.add(lcb.SkillId);
}
//Get remaining skills from LiveChatButtonSkill join object
for(LiveChatButtonSkill lcbs : [SELECT SkillID FROM LiveChatButtonSkill WHERE ButtonId =:
myButtonId]) {
    skillIds.add(lcbs.SkillId);
}
//Retrieve all skills into a single list
List<Skill> skills = [SELECT Id, DeveloperName FROM Skill WHERE Id IN :SkillIds];
```

## LiveChatDeployment

---

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

### Supported Calls

create(), query(), update(), retrieve()

### Fields

Field Name	Details
BrandingId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the static image resource that's displayed in the chat window</p>
ConnectionTimeoutDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the amount of time before the chat times out, in seconds.</p>

Field Name	Details
ConnectionWarningDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the amount of time before a time-out warning is displayed to the agent, in seconds.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Domains	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter (unavailable in API version 25.0 and later), Nillable, Sort (unavailable in API version 25.0 and later)</p> <p><b>Description</b> A comma-separated list of domains the deployment is whitelisted for. Leave this blank to allow the deployment to be used on any domain.</p>
HasTranscriptSave	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Determines whether visitors can download and save transcripts from the chat window</p>

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the deployment</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The name of the deployment</p>
MobileBrandingId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the static image resource displayed in the mobile version of the chat window</p>
OptionsHasPrechatApi	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether developers can access the Pre-Chat API</p>
SiteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the site used for loading static resources</p>
WindowTitle	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The text displayed in the title bar of the browser window used to launch the chat window</p>

## Usage

Use this object to query and manage live chat deployments.

## LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Fields

Field Name	Details
ActionType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The action to take on the text (remove or replace) when the sensitive data rule is triggered.</p>
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable</p> <p><b>Description</b></p> <p>The description of the sensitive data rule—for example, “Block social security numbers.”</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p>

## Field Name

## Details

**Description**

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

EnforceOn

**Type**

int

**Properties**

Create, Filter, Group, Sort

**Description**

Determines the roles on which the rule is enforced. The value is determined using bitwise OR operation. There are seven possible values:

1. Rule enforced on Agent
2. Rule enforced on Visitor
3. Rule enforced on Agent and Visitor
4. Rule enforced on Supervisor
5. Rule enforced on Agent and Supervisor
6. Rule enforced on Visitor and Supervisor
7. Rule enforced on Agent, Visitor, and Supervisor

IsEnabled

**Type**

boolean

**Properties**

Create, Filter, Group, Sort

**Description**

Specifies whether a sensitive data rule is active (`true`) or not (`false`). Default value (if none is provided) is `false`.

Language

**Type**

picklist

**Properties**

Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	<p><b>Description</b></p> <p>The language of the sensitive data rule.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Label for the sensitive data rule.</p>
NamespacePrefix	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
Pattern	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create</p> <p><b>Description</b></p> <p>The pattern of text blocked by the rule. Written as a JavaScript regular expression (regex).</p>
Priority	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates the priority level of a Chat.</p>
Replacement	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The string of characters that replaces the blocked text (if <code>ActionType Replace</code> is selected).</p>

## Usage

Use this object to mask or delete data of specified patterns, such as credit card, social security, phone and account numbers, or even profanity.

## LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Abandoned	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The amount of time in seconds an incoming chat request remained unanswered by an agent before the chat was disconnected by the customer.</p>
AccountId	<p><b>Type</b></p> <p>ID</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the account associated with the chat transcript.</p>
AverageResponseTimeOperator	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The agent's average response time (in seconds) to chat messages from the visitor.</p>
AverageResponseTimeVisitor	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The visitor's average response time (in seconds) to chat messages from the agent.</p>
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The contents of the chat.</p>
Browser	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The browser the visitor used for the chat.</p>
BrowserLanguage	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The language of the visitor's browser.</p>
CaseID	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the case associated with the chat transcript.</p>
ChatDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total duration of the chat in seconds.</p>
ChatKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort</p> <p><b>Description</b> The session ID of the chat before it is persisted. <code>ChatKey</code> can be used with advanced integrations in the Salesforce console. This field is available in API version 25.0 and later.</p>
ContactID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the contact associated with the chat transcript.</p>
EndedBy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The way the chat was ended: by the operator, the visitor, or the system.</p>
EndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time the chat ended.</p>

Field Name	Details
IpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The visitor's IP address.</p>
IsChatbotSession	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Whether the visitor is chatting with a Chatbot (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LeadID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the lead associated with the chat transcript.</p>
LiveChatButtonID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The ID of the LiveChatButton the chat session originated from.</p>
LiveChatDeploymentID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Type</b> The ID of the LiveChatDeployment the chat session originated from.</p>
LiveChatVisitorID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the visitor associated with the chat transcript.</p>
Location	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The best-guess approximation of the visitor's location.</p>
MaxResponseTimeOperator	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The maximum time in seconds it took an agent to respond to a chat visitor's message.</p>
MaxResponseTimeVisitor	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The maximum time in seconds it took a customer to respond to an agent's message.</p>
Name	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the transcript.</p>
OperatorMessageCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of messages sent by agent(s) during the chat.</p>
OwnerID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the operator who participated in the chat last; for missed chats, this is a system user.</p>
Platform	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The visitor's operating system platform.</p>
ReferrerUri	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Where the chat request originated.</p>
RequestTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable. Sort, Update</p> <p><b>Description</b> The time the visitor requested the chat.</p>

Field Name	Details
ScreenResolution	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The visitor's screen resolution.</p>
SkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The record ID of the primary Skill associated with the LiveChatButton the chat session originated from. To associate multiple skills with a LiveChatTranscript, use LiveChatTranscriptSkill junction objects.</p>
StartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time the chat started.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The final status of the chat: completed, missed, dropped or blocked.</p>
SupervisorTranscriptBody	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The text body of the supervisor's chat transcript.</p>
UserAgent	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The visitor's user agent string.</p>
VisitorMessageCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of messages sent by the visitor during the chat.</p>
VisitorNetwork	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Decsription</b> The network or service provider the chat visitor used for the chat.</p>
WaitTime	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total amount of time in seconds a chat request was waiting to be accepted by an agent.</p>

## Usage

Use this object to query and manage live chat transcripts.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [LiveChatTranscriptFeed \(API version 47.0\)](#)

Feed tracking is available for the object.

### [LiveChatTranscriptHistory](#)

History is available for tracked fields of the object.

### [LiveChatTranscriptOwnerSharingRule \(API version 29.0\)](#)

Sharing rules are available for the object.

### [LiveChatTranscriptShare](#)

Sharing is available for the object.

# LiveChatTranscriptChangeEvent

---

Captures changes of events that occur over the lifetime of a chat. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `retrieve()`

## Fields

Field	Details

## LiveChatTranscriptEvent

---

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
AgentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the agent associated with the event.</p>
Detail	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details associated with the event.</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LiveChatTranscriptId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b> The ID of the live chat transcript associated with the event.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the event.</p>
Time	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> The time at which the event happened.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The kind of event that occurred.</p> <ul style="list-style-type: none"> <li>• Accept—Accepted</li> <li>• AgentBlocked—Blocked by Agent</li> <li>• AlertCriticalWaitChat—Critical Wait Alert Time Reached</li> <li>• CancelBlocked—Cancel (Blocked)</li> <li>• CancelNoAgent—Cancel (No Agent)</li> <li>• CancelNoQueue—Cancel (No Queue)</li> <li>• CancelVisitor—Canceled by Visitor</li> <li>• ChasitorIdleTimeout—Visitor Idle Time-Out</li> <li>• ChasitorIdleTimeoutWarningCleared—Visitor Idle Time-Out Warning Cleared</li> <li>• ChasitorIdleTimeoutWarningTriggered—Visitor Idle Time-Out Warning Appeared</li> <li>• ChatRequest—Chat Requested</li> <li>• ChatResumedAfterTransfer—Chat resumed</li> <li>• ChatbotEndChat—Chatbot end chat</li> <li>• ChatbotEndedChatByAction—Conversation ended by automated action</li> </ul>

## Field Name

## Details

- 
- ChatbotEstablished—Accepted by Chatbot
  - ChatbotNotEstablished—Chatbot Request Failed
  - ChoiceRoute—Routed (Choice)
  - ClearCriticalWaitChat—Critical Wait Alert Cleared
  - ConferenceRequest—Chat Conference Requested
  - ConferenceRequestCanceled—Chat Conference Canceled
  - ConferenceRequestDeclined—Chat Conference Declined
  - DeclineManual—Decline (Manual)
  - DeclineTimeout—Decline (Timeout)
  - EndAgent—Ended by Agent
  - EndVisitor—Ended by Visitor
  - Enqueue—Queued
  - FileCanceledAgent—File Transfer Canceled by Agent
  - FileCanceledChasitor—File Transfer Canceled by Visitor
  - FileTransferFailure—File Transfer Failure
  - FileTransferRequested—File Transfer Requested by Agent
  - FileTransferSuccess—File Transfer Success
  - FileTransferToChasitor—File Transfer Initiated by Agent
  - FlagLoweredAgent—Flag Lowered by Agent
  - FlagLoweredSupervisor—Flag Lowered by Supervisor
  - FlagRaised—Flag Raised
  - LeaveAgent—Agent Left
  - LeaveVisitor—Visitor Left
  - OperatorJoinedConference—Agent Joined Conference
  - OperatorLeftConference—Agent Left Conference
  - Other
  - PushAssignment—Routed (Push)
  - SensitiveDataAgent—Sensitive data blocked (Agent)
  - SensitiveDataSupervisor—Sensitive data blocked (Supervisor)
  - SensitiveDataVisitor—Sensitive data blocked (Visitor)
  - Transfer—Transfer Accepted
  - TransferCancelled—Transfer Request Canceled
  - TransferDeclined—Transfer Request Declined
  - TransferRequest—Transfer Requested
  - TransferToBotFailed—Transfer to bot failed
  - TransferToButtonFailed—Transfer to button failed
  - TransferToQueueFailed—Transfer to queue failed
  - TransferredToBot—Transferred to bot

Field Name	Details
	<ul style="list-style-type: none"> <li>• <code>TransferredToButton</code>—Transferred to button</li> <li>• <code>TransferredToQueue</code>—Transferred to queue</li> <li>• <code>TransferredToSbrSkill</code>—Transferred to skill</li> <li>• <code>TransferredToSbrSkillFailed</code>—Transfer to skill failed</li> <li>• <code>Unassigned</code></li> </ul>

## Usage

Use this object to query and manage live chat transcript events.

 **Note:** `LiveChatTranscriptEvent` records are inserted after the chat is closed and the `LiveTranscript` record updated). However, the trigger on the `LiveChatTranscriptEvent` sObject fires separately on each `LiveChatTranscriptEvent` record within the same transaction.

All the `LiveChatTranscriptEvent` records are inserted in a single transaction but one by one. For example, the trigger is executed for each individual record.

```
trigger LCTE on LiveChatTranscriptEvent (before insert) {
    // Trigger.New will have only 1 record at a time and trigger will execute for
    individual record
    for(LiveChatTranscriptEvent l : Trigger.New)
        system.debug(l.Type + '>>' +l.Detail);
}
```

To avoid hitting any governors and limits, design your functionality considering this behavior. You can execute the logic by filtering the records based on the `Type` field of `LiveChatTranscriptEvent`.

## LiveChatTranscriptShare

Represents a sharing entry on a `LiveChatTranscript` object. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()` `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
<code>AccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Level of access that the User or Group has to the LiveChatTranscript. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All (This value is not valid for <code>create()</code> or <code>update()</code> calls.)</li> </ul> <p>This value must be set to an access level that is higher than the organization's default access level for live chat transcripts.</p>
ParentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the parent object, if any</p>
RowCause	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Reason that this sharing entry exists.</p> <p>You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Values may include:</p> <ul style="list-style-type: none"> <li>• Manual—The User or Group has access because a user with "All" access manually shared the LiveChatTranscript with them.</li> <li>• Owner—The User is the owner of the LiveChatTranscript or is in a role above the QuickText owner in the role hierarchy.</li> </ul>
UserOrGroupID	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the User or Group that has been given access to the LiveChatTranscript .</p>

## Usage

This object lets you determine which users and groups can view and edit LiveChatTranscript records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

## LiveChatTranscriptSkill

---

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

### Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

### Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the transcript.</p>
SkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The record ID of the skill.</p>
TranscriptId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The record ID of the transcript.</p>

### Usage

Use this object to assign a specific skill to a specific transcript for multi-skill routing.

# LiveChatUserConfig

---

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `update()`, `query()`, `retrieve()`

## Fields

Field Name	Details
<code>AutoGreeting</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable</p> <p><b>Description</b> The text that is automatically sent from an agent to a visitor when a chat session starts.</p>
<code>Capacity</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Limits the number of active chat session an agent can engage in.</p>
<code>CriticalWaitTime</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The amount of time before a chat flashes to alert an agent to answer it.</p>
<code>CustomAgentName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The custom name of the agent associated with the Live Agent configuration.</p>
<code>DeveloperName</code>	<p><b>Type</b> string</p>

## Field Name

## Details

**Properties**

Create, Filter, Group, Nillable, Sort

**Description**

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

---

HasLogoutSound

**Type**

boolean

**Properties**

Create, Defaulted on create, Filter, Group, Sort

**Description**

Determines whether a sound plays when an agent logs out of the console.

---

HasNotifications

**Type**

boolean

**Properties**

Create, Defaulted on create, Filter, Group, Sort

**Description**

Determines whether desktop notifications are enabled for the configuration. Available in API version 25.0 and later.

---

HasRequestSound

**Type**

boolean

**Properties**

Create, Defaulted on create, Filter, Group, Sort

**Description**

Determines whether a sound plays when a chat request comes in.

---

HasSneakPeek

**Type**

boolean

**Properties**

Create, Defaulted on create, Filter, Group, Sort

---

Field Name	Details
	<p><b>Description</b> Determines whether an agent sees a real-time preview of the messages a visitor types.</p>
IsAutoAwayOnDecline	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Determines whether agents' status is automatically changed to Away when they decline a chat request. Available in API version 26.0 and later.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the configuration.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The name of the configuration.</p>
OptionsHasAgentFileTransfer	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether agents can initiate a file transfer from a chat customer. Available in API version 31.0 and later.</p>
OptionsHasAgentSneakPeek	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether Sneak Peek is enabled for agents. Available in API version 29.0 and later.</p>

Field Name	Details
OptionsHasAssistanceFlag	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether assistance flags are enabled for agents. Available in API version 29.0 and later.</p>
OptionsHasChatConferencing	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether agents can invite other agents into a customer chat. Available in API version 34.0 and later.</p>
OptionsHasChatMonitoring	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether supervisors can view agents' ongoing chats. Available in API version 29.0 and later.</p>
OptionsHasChatTransferToAgent	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an agent can transfer a chat directly to another agent. Available in API version 36.0 and later.</p>
OptionsHasChatTransferToButton	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an agent can transfer a chat to an agent assigned to a particular chat button. Available in API version 36.0 and later.</p>
OptionsHasChatTransferToSkill	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Specifies whether an agent can transfer a chat to agents assigned to a particular skill. Available in API version 36.0 and later.</p>
OptionsHasVisitorBlocking	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether an agent has the ability to block troublesome visitors by IP address. Available in API version 34.0 and later.</p>
OptionsHasWhisperMessage	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether supervisors can send private messages to agents within an agent's chat with a customer. Available in API version 29.0 and later.</p>
OptionsIsAutoAwayOnPushTimeout	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Determines whether an agent's status automatically changes to Away if the agent doesn't respond to a chat request within the specified push time-out limit. Available in API version 34.0 and later.</p>
SupervisorDefaultAgentStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The default agent status by which to filter agents in the Agent Status list in the supervisor panel.</p>
SupervisorDefaultButtonId	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The default button ID by which to filter agents in the Agent Status list in the supervisor panel.</p>
SupervisorDefaultSkillId	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The default skill ID by which to filter agents in the Agent Status list in the supervisor panel.</p>

## Usage

Use this object to query and manage agent configurations in Chat.

## LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

## Fields

Field Name	Details
LiveChatUserConfigId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The record ID of the agent configuration</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

**Field Name****Details****Description**

The record ID of the profile

## Usage

Use this object to assign specific agent configurations to specific user profiles.

## LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

## Fields

**Field Name****Details**

LiveChatUserConfigId

**Type**

reference

**Properties**

Create, Filter, Group, Sort

**Description**

The record ID of the agent configuration

UserId

**Type**

reference

**Properties**

Create, Filter, Group, Nillable, Sort

**Description**

The record ID of the user

## Usage

Use this object to assign specific agent configurations to specific users.

## LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
<code>LastReferencedDate</code>	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
<code>LastViewedDate</code>	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
<code>Name</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The name of the visitor</p>
<code>SessionKey</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The session key used to uniquely identify the visitor</p>

## Usage

Use this object to query and manage live chat visitors.

## Location

---

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
CloseDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date the location closed or went out of service.</p>
ConstructionEndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date construction ended at the location.</p>
ConstructionStartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date construction began at the location.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> A brief description of the location.</p>
DrivingDirections	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Directions to the location.</p>
IsInventoryLocation	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the location stores parts.</p> <p> <b>Note:</b> This field must be selected if you want to associate the location with product items.</p>
IsMobile	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the location moves. For example, a truck or tool box.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the location was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the location was last viewed.</p>

Field Name	Details
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The latitude of the location.</p>
Location	<p><b>Type</b> location</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The geographic location.</p>
LocationLevel	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The location's position in a location hierarchy. If the location has no parent or child locations, its level is 1. Locations that belong to a hierarchy have a level of 1 for the root location, 2 for the child locations of the root location, 3 for their children, and so forth.</p>
LocationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Picklist of location types. The values are:</p> <ul style="list-style-type: none"> <li>• Warehouse (default)</li> <li>• Site</li> <li>• Van</li> <li>• Plant</li> </ul>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The longitude of the location.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the location. For example, Service Van #4.</p>
OpenDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date the location opened or came into service.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The location's owner or driver.</p>
ParentLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The location's parent location. For example, if vans are stored at a warehouse when not in service, the warehouse is the parent location.</p>
PossessionDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date the location was purchased.</p>
RemodelEndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Date remodel construction ended at the location.</p>
RemodelStartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date remodel construction ended at the location.</p>
RootLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read Only) The top-level location in the location's hierarchy.</p>
TimeZone	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Picklist of available time zones.</p>
VisitorAddressId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup to an account's or client's address.</p>

## Usage

To track your inventory in Salesforce, create product items, which represent the stock of a particular product a particular location. For example, create a product item that represents the 500 bolts you have in stock at your Warehouse A location. Each product item must be associated with a location.

To get a more granular picture of your field service operation, associate locations with service territories. For example, if a warehouse is located in a particular service territory, add it as a service territory location.

 **Important:** "Location" in Salesforce can also refer to the geolocation compound field found on many standard objects. When referencing the Location object in your Apex code, always use `Schema.Location` instead of `Location` to prevent confusion

with the standard Location compound field. If referencing both the Location object and the Location field in the same snippet, you can differentiate between the two by using `System.Location` for the field and `Schema.Location` for the object.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### LocationFeed

Feed tracking is available for the object.

### LocationHistory

History is available for tracked fields of the object.

### LocationOwnerSharingRule

Sharing rules are available for the object.

### LocationShare

Sharing is available for the object.

## LoginEvent

---

The documentation has moved to [LoginEvent](#) in the *Platform Events Developer Guide*.

## LoginGeo

---

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Manage Users permissions can access this object.

## Fields

Field	Details
City	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The city where the user's IP address is physically located. This value is not localized.</p>

Field	Details
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The country where the user's IP address is physically located. This value is not localized.</p>
CountryIso	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ISO 3166 code for the country where the user's IP address is physically located. For more information, see <a href="#">Country Codes - ISO 3166</a></p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The latitude where the user's IP address is physically located.</p>
LoginTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Time of the login attempt, in GMT time zone.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The longitude where the user's IP address is physically located.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The postal code where the user's IP address is physically located. This value is not localized.</p>
Subdivision	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The name of the subdivision where the user's IP address is physically located. In the U.S., this value is usually the state name (for example, Pennsylvania). This value is not localized.</p>

## Usage

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Query showing the country for a login event, where Id>LoginGeoId from AuthSession	<code>SELECT Country FROM LoginGeo WHERE Id = 'OLE#####'</code>
Query showing the city and postal code for a login event, where Id>LoginGeoId from LoginHistory	<code>SELECT City, PostalCode FROM LoginGeo WHERE Id = 'OSO#####'</code>

## LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

With one exception, only users with Manage Users permissions can access this object. The exception is that, in API version 37.0 and later, all users can retrieve their own login history records.

## Fields

Field	Details
ApiType	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> Indicates the API type, for example Soap Enterprise. Label is <b>API Type</b>.</p>
APIVersion	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> Displays the API version used by the client. Label is <b>API Version</b>.</p>
Application	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The application used to access the organization. Label is <b>Application</b>.</p>
AuthenticationServiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 18-character ID for an authentication service for a login event. For example, you can use this field to identify the SAML or authentication provider configuration with which the user logged in. This field is available in API version 34.0 and later. Label is <b>Authentication Service Id</b>.</p>
Browser	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The current browser version. Label is <b>Browser</b>.</p>
CipherSuite	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see <a href="#">OpenSSL Cryptography and SSL/TLS Toolkit</a>. This field is available in API version 37.0 and later.</p>
ClientVersion	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> Version of the API client. Label is <b>Client Version</b>.</p>
CountryIso	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ISO 3166 code for the country where the user's IP address is physically located. For more information, see <a href="#">Country Codes - ISO 3166</a>. This field is available in API version 37.0 and later.</p>
LoginGeoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful login event. The accuracy of geolocation fields like country, city, or postal code can vary because of the nature of the technology. This field is available in API version 34.0 and later.</p>
LoginTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Time zone is based on GMT. Label is <b>Login Time</b>.</p>
LoginType	<p><b>Type</b> picklist</p>

## Field

## Details

**Properties**

Filter, Group, Restricted picklist, Sort

**Description**

The type of login used to access the session.

- AppExchange
- Application (username and password login)
- Certificate (certificate-based authentication)
- ChatterCommunityPortalUnPwd (username and password login to Chatter community)
- ChatterCommunityThirdPartySso (single sign-on to Chatter community)
- EmployeeLoginToCommunity (internal username and password login to community)
- LightningLogin
- NetworksPortalApiOnly (API login to community)
- Oauth, Remote Access Client (OAuth 1.0 authorization)
- Oauth2, Remote Access 2.0 (OAuth 2.0 authorization)
- Partner (username and password login to partner portal)
- PasswordlessLogin (external user passwordless login)
- Portal (username and password login to portal)
- PrmPortalThirdPartySso (single sign-on to Partner Relationship Management (PRM) portal)
- PortalThirdPartySso (single sign-on to portal)
- PrmPortal (username and password login to PRM portal)
- Saml (SAML 1.1 login)
- SamlChatterNetworks (SAML login to community)
- SamlCspPortal (SAML login to Customer Service Portal (CSP))
- SamlPrmPortal (SAML login to PRM portal)
- SamlSite (SAML login to site)
- Saml2 (SAML 2.0 login)
- SelfService (username and password login to Self-Service portal)
- ThirdPartySso (authentication provider login)

Label is **Login Type**.

## LoginUrl

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

URL from which the login request is coming. Label is **Login URL**.

Field	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the community that the user is logging in to. This field is available in API version 31.0 and later, if Salesforce Communities are enabled for your organization.</p>
OptionsIsGet	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The HTTP method used for the session login is a GET request.</p>
OptionsIsPost	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The HTTP method used for the session login is a POST request.</p>
Platform	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> Operating system on the login machine. Label is <b>Platform</b>.</p>
SourceIp	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> IP address of the machine from which the login request is coming. The address can be an IPv4 or IPv6 address in API version 23.0 or later. In API version 22.0 or earlier, the address is an IPv4 address, and IPv6 addresses are null. Label is <b>Source IP</b>.</p>
Status	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Displays the status of the attempted login. Status is either success or a reason for failure. Label is <b>Status</b>.</p>
TlsProtocol	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The TLS protocol used for the login. Possible values are:</p> <ul style="list-style-type: none"> <li>• TLS 1.0</li> <li>• TLS 1.1</li> <li>• TLS 1.2</li> <li>• TLS 1.3</li> <li>• Unknown</li> </ul> <p>This field is available in API version 37.0 and later.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>ID of the user logging in. Label is <b>User ID</b>.</p>

## Usage

Not all fields are filterable. You can only filter on the following fields:

- AuthenticationServiceId
- CipherSuite
- CountryIso
- Id
- LoginTime
- LoginType
- LoginUrl
- NetworkId
- OptionsIsGet
- OptionsIsPost
- TlsProtocol
- UserId

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Simple query showing UserId & LoginTime for each user	<code>SELECT UserId, LoginTime from LoginHistory;</code>
Query showing logins only after a specified date and time	<code>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime &gt; 2010-09-20T22:16:30.000Z;</code>
Query showing logins for a specific time interval	<code>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime &gt; 2010-09-20T22:16:30.000Z AND LoginTime &lt; 2010-09-21T22:16:30.000Z;</code>
Query showing the authentication service for a SAML login event, where Id=AuthenticationServiceId from LoginHistory	<code>SELECT name, issuer, samlVersion FROM SamlSsoConfig WHERE Id = 'OLE#####'</code>
Query showing the authentication service for an authentication provider login event, where Id=AuthenticationServiceId from LoginHistory	<code>SELECT Type, DeveloperName FROM AuthProvider WHERE Id = 'OSO#####'</code>

## LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

## Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

## Fields

Field	Details
ChallengeMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The challenge method used to confirm the user's identity. Possible values include the following.</p> <ul style="list-style-type: none"> <li>• Email</li> <li>• SMS</li> <li>• TOTP_CHOICE: The user chooses two-factor authentication.</li> <li>• TOTP_ONLY: The user is required to use two-factor authentication.</li> </ul>

Field	Details
ChallengeSentDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the user was authenticated.</p>
IsAuthenticated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has already been authenticated.</p>
SourceIp	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The IP address the user logged in from.</p>
UsersId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user associated with this item.</p>

## Usage

At every login, the IP address of the login request is checked against the validated IP addresses using `LoginIp`. A match means the login IP address is a known IP address. If there's no match, the address is unknown, and the user is asked to confirm their identity.

## LogoutEventStream

---

The documentation has moved to [LogoutEventStream](#) in the *Platform Events Developer Guide*.

## LookedUpFromActivity

---

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

### Supported Calls

`describeSObjects()`

### Fields

Field Name	Details
<code>AccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the related account, which is determined as follows:</p> <ul style="list-style-type: none"> <li>• The account associated with the <code>whatId</code>, if it exists; or</li> <li>• The account associated with the <code>whoId</code>, if it exists; otherwise</li> <li>• <code>null</code></li> </ul> <p>For information on IDs, see <a href="#">Field Types</a></p>
<code>ActivityDate</code>	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates one of the following:</p> <ul style="list-style-type: none"> <li>• The due date of a task</li> <li>• The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code></li> </ul> <p>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.</p>
<code>ActivityDateTime</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Aggregate, Filter, Nillable, Sort</p>

**Field Name****Details****Description**

Contains the event's due date if the `IsAllDayEvent` flag is set to `false`. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is **Due Date Time**.

The value for this field and `StartDateTime` must match, or one of them must be `null`.

**ActivitySubtype****Type**

picklist

**Properties**

Filter, Group, Nillable, Restricted picklist, Sort

**Description**

Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.

`ActivitySubtype` values:

- Task
- Email
- Call
- Event
- List Email

**ActivityType****Type**

picklist

**Properties**

Filter, Group, Nillable, Sort

**Description**

Represents one of the following values: `Call`, `Email`, `Meeting`, or `Other`. Label is `Type`. These are default values, and can be changed.

`ActivityType` is the union of `TaskType` and `EventType`. If the same activity appears in both dynamic picklists, duplicate activities appear.

`TaskType` and `EventType` can each have a `Call` type. Internally, they are distinct from each other.

**CallDisposition****Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

Represents the result of a given call; for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.

Field Name	Details
CallDurationInSeconds	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Duration of the call in seconds.</p>
CallObject	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of a call center. Limit is 255 characters.</p>
CallType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of call being answered: Inbound, Internal, or Outbound.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Contains a description of the event or task. Limit is 32 KB.</p>
DurationInMinutes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the duration of the event or task.</p>
EndDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

**Field Name****Details****Description**

Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:

- If `IsAllDayEvent` is true, you can supply a value for either `DurationInMinutes` or `EndTime`. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are `null`, the duration defaults to one day.
- If `IsAllDayEvent` is false, a value must be supplied for either `DurationInMinutes` or `EndTime`. Supplying values in both fields is allowed if the values add up to the same amount of time.

IsAllDayEvent

**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

**Description**

If the value of this field is set to `true`, then the activity is an event spanning a full day, and the `ActivityDate` defines the date of the event. If the value of this field is set to `false`, then the activity may be an event spanning less than a full day, or it may be a task. Label is `All-Day Event`.

IsClosed

**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

**Description**

Indicates whether a task is closed; value is always `false`. This field is set indirectly by setting `Status` on the task—each picklist value has a corresponding `IsClosed` value. Label is `Closed`.

IsHighPriority

**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

**Description**

Indicates a high-priority task. This field is derived from the `Priority` field.

IsReminderSet

**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

Field Name	Details
	<p><b>Description</b> Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>).</p>
IsTask	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. Label is <code>Task</code>.</p>
IsVisibleInSelfService	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. Label is <code>Visible in Self-Service</code>.</p>
Location	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is <code>null</code>.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the user or group who owns the activity.</p>
Priority	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the priority of a task, such as high, normal, or low.</p>

Field Name	Details
ReminderDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.</p>
StartDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Indicates the start date and time of the event. Available in versions 13.0 and later. The <code>StartDateTime</code> field contains the event start date.  However, if the event's <code>IsAllDayEvent</code> flag is set to <code>true</code> (indicating an all-day event), then the time stamp in the <code>StartDateTime</code> field is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the time stamp to account for any time zone differences.  If the event's <code>IsAllDayEvent</code> flag is set to <code>false</code>, then you must translate the time portion of the time stamp in the <code>StartDateTime</code> field to or from a local time zone for the user or the application, as appropriate, and the translation must be in the Coordinated Universal Time (UTC) time zone.  If this field has a value, then <code>ActivityDate</code> and <code>ActivityDateTime</code> either must be <code>null</code> or must match the value of this field.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the current status of a task, such as in progress or complete. Each predefined status field sets a value for <code>IsClosed</code>.</p>
Subject	<p><b>Type</b> combobox</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Contains the subject of the task or event.</p>

Field Name	Details
WhatId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The <code>whatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>whatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>.</p>
WhoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The <code>WhoId</code> represents a human such as a lead or a contact. <code>WhoIds</code> are polymorphic. Polymorphic means a <code>WhoId</code> is equivalent to a contact's ID or a lead's ID. The label is <code>Name ID</code>.</p>

## Usage

### Query activities related to an object

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity custom lookup relationship; for example:

```
SELECT id, name,
(SELECT id, subject from sponsoredact__r)
FROM Contact
```

In this example `sponsoredact__r` is a user defined relationship list.

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following restrictions on users who don't have "View All Data" permission help prevent performance issues:

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with 'A'; instead, you must reference a single account record.
- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- You must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order; you can display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

## Macro

---

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of what this macro does.</p>
FolderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Returns the ID of the folder that contains the macro. Available in API version 44.0 and later.</p>
FolderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Name of the folder that contains the macro. Available in API version 44.0 and later.</p>
IsAlohaSupported	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Specifies whether the macro is supported in Salesforce Classic.</p>

Field	Details
IsLightningSupported	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Specifies whether the macro is supported in Lightning Experience.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the macro record was last referenced.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the macro record was last viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the macro.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the session record.</p>
StartingContext	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The object the macro performs actions on. In Salesforce Classic, macros are supported on objects with both feed-based layouts and quick actions. In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.</p>

## Usage

A macro definition consists of a Macro object and several associated [MacroInstruction](#) objects.

First, create a Macro object. Then, create MacroInstructions that specify objects, operations, conditions, and targets for the macro.

A macro contains an ordered list of macro instructions whose index field, `sortOrder`, is 0-based. If there's an incorrect sequence of macro instructions, the macro doesn't execute.

If you update a macro definition or add or remove instructions from a macro, make sure that the `sortOrder` field that defines the execution order is correct. To delete an entire macro definition, invoke the delete operation on the Macro object.

The table describes the supported macro instruction targets and how they relate to each other.

 **Note:** Strings indicated by `<brackets>` are variables. The variable description describes the required type. For example, `Tab.<EntityApiName>` requires the entity name. If your custom entity name is `MyCustomObject`, your target API is `Tab.MyCustomObject__c`.

If a macro instruction listed in the table supports an implicit operation, you can use that operation as a direct child instruction without explicitly specifying a target. The hyphens used in the table illustrate the hierarchical relationship between targets. A target isn't available if its parent isn't.

**Table 1: Macro Instruction Target Grammar and Hierarchy**

Target API Name	Supported Operations
<code>Tab.&lt;EntityApiName&gt;</code>	SELECT, CLOSE (implicit)
- <code>QuickAction.&lt;EntityApiName&gt;.&lt;QuickActionName&gt;</code>	SELECT, SUBMIT (implicit)
- - <code>Field.&lt;QATargetEntityApiName&gt;.&lt;FieldApiName&gt;</code>	SET
- - <code>Field.&lt;QATargetEntityApiName&gt;.&lt;MultilineTextFieldApiName&gt;.cursor</code>	INSERT
- - <code>Field.&lt;QATargetEntityApiName&gt;.&lt;SinglelineTextFieldApiName&gt;.end</code>	INSERT
- <code>QuickAction.Case.Email</code>	SELECT, SUBMIT (implicit)
- - <code>Field.EmailMessage.&lt;FieldApiName&gt;</code>	SET
- - <code>Field.EmailMessage.&lt;MultilineTextFieldApiName&gt;.cursor</code>	INSERT
- - <code>Field.EmailMessage.&lt;SinglelineTextFieldApiName&gt;.end</code>	INSERT
- - <code>Field.EmailTemplate</code>	SET
- <code>SidebarCmp.Knowledge</code>	SELECT

Target API Name	Supported Operations
- - SearchAction.KnowledgeArticle	SELECT
- - - Field.SearchString	SET, INSERT
- - - Command.Search	SUBMIT
- - SearchResult.KnowledgeArticle.MostRecentItem	SELECT
- - - Command.AttachToRecord	SUBMIT
- - - Command.InsertToEmail	SUBMIT
- - - Command.AttachToEmailAsPDF	SUBMIT

**Example:** This example describes a macro that opens a quick action, sets some fields in the quick action, and submits the quick action.

```

0. SELECT Tab.Case
1.   SELECT QuickAction.Case.Email
2.     SET Field.EmailMessage.Subject
3.     SET Field.EmailMessage.ToAddress
4.     INSERT Field.EmailMessage.HtmlBody.cursor
5.     SUBMIT

```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MacroHistory

History is available for tracked fields of the object.

### MacroOwnerSharingRule

Sharing rules are available for the object.

### MacroShare

Sharing is available for the object.

## MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
MacroId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the macro that contains this instruction.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Name of the instruction.</p>
Operation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The action that the macro instruction performs. Valid values are:</p> <ul style="list-style-type: none"> <li>• Select</li> <li>• Set</li> <li>• Insert</li> <li>• Submit</li> <li>• Close</li> </ul> <p>To create macro instructions that execute conditionally, these values are available in API version 46.0 and later.</p> <ul style="list-style-type: none"> <li>• IF</li> <li>• ELSEIF</li> <li>• ELSE</li> <li>• ENDIF</li> </ul>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Order of this instruction in the macro.</p>

Field Name	Details
Target	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The object that's the target of the operation. For example, the target for the active case tab (Tab.Case) or a quick action, like the Send Email action on the case object (QuickAction.Case.SendEmail).</p> <p>In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.</p> <p>In Salesforce Classic, macros are supported on objects with feed-based layouts and quick actions.</p> <p>You can specify relative dates and times for the following targets.</p> <ul style="list-style-type: none"> <li>• DateTime</li> <li>• Date</li> <li>• Time</li> <li>• DueDate</li> <li>• Birthday</li> </ul>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Value of a field. If the operation is Select, then the value is null, because the operation selects the object on which the macro performs an action. An instruction can contain both a <code>Value</code> field and a <code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null.</p> <p>To create relative dates and times, specify a valid Salesforce formula, prefaced by <code>MacroFormula</code>. For example, the following formula creates a date that is 1 day from now:</p> <pre>MacroFormula: NOW () + 1</pre> <p>You can't edit custom relative formulas in the Macro Builder.</p>
ValueRecord	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the value or record. The <code>ValueRecord</code> can be either a value or a record, but not both. An instruction can contain both a <code>Value</code> field and a</p>

Field Name	Details
	<code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null.

## Usage

MacroInstructions can specify objects, operations, conditions, and targets. For example, a macro containing these instructions performs a quick action that sends an email.

```
Select Email QuickAction
Set Subject...
Set To...
Set Body...
Submit
```

You can create conditional macros using `IF`, `ELSEIF`, `ELSE`, and `ENDIF` as operations. In a conditional statement, the [ExpressionFilter](#) and [ExpressionFilterCriteria](#) objects are used to control which instructions execute. The `ExpressionFilter` object lets you define a logical expression with one or more conditions. It uses a child object, `ExpressionFilterCriteria`, to represent each condition that is evaluated.

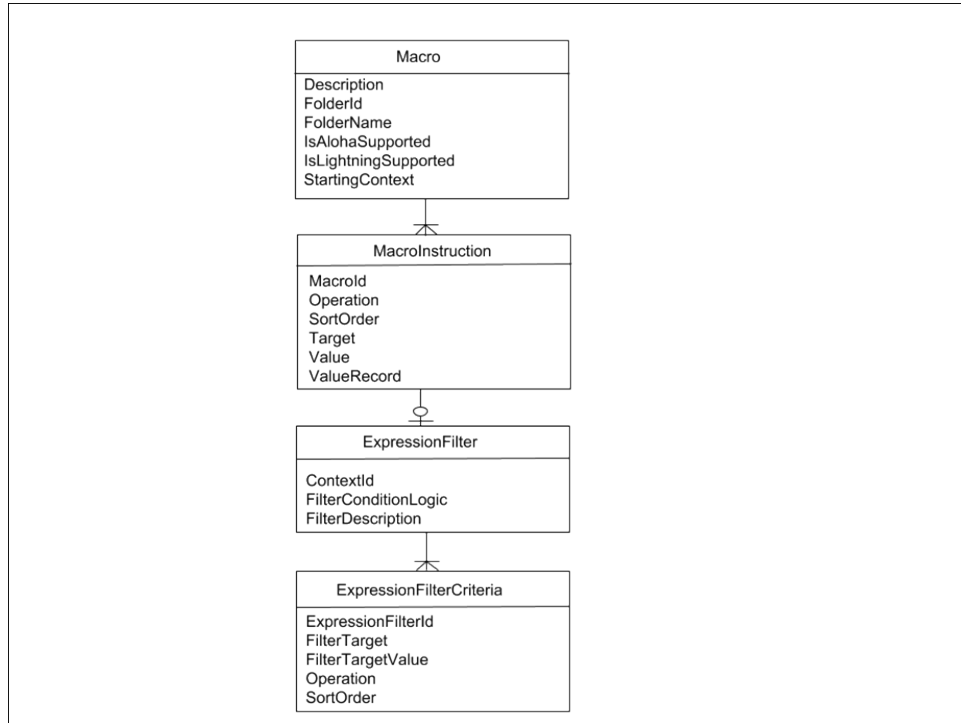

For example, consider the following conditional statement and macro instructions.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
    Select Email QuickAction
    Set Subject...
    Set To...
    Set Body...
    Submit
ELSE
    Select Update Case Detail
    Update Case Description...
    Submit
ENDIF
```

The `ExpressionFilter` object includes a `FilterConditionLogic` field containing `1 AND 2`, where 1 and 2 are `ExpressionFilterCriteria` objects. The `SortOrder` field in the `ExpressionFilterCriteria` object maps condition 1 to `Case.Status EQUALS New`, and condition 2 to `Case.Origin EQUALS Phone`. If the conditional statement evaluates to true, then the instructions in the `IF` block are executed; otherwise, the instructions in the `ELSE` block are executed.

Any number of macro instructions can be present inside an `IF`, `ELSEIF`, or `ELSE` block. In addition, conditions can be nested.

## Data Model

## MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

## Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

## Special Access Rules

This object is always read-only.

## Fields

Field	Details
AppContext	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Context in which the macro was run. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• Aloha—Salesforce Classic</li> <li>• Lightning—Lightning Experience</li> <li>• Unknown</li> </ul>
ConditionCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number of conditional instructions contained in the macro at execution.</p>
ContextRecord	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the record on which the macro was run.</p>
DurationInMs	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The execution time, in milliseconds, for the macro.</p>
ExecutedInstructionCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of macro instructions that ran successfully. If the macro completed successfully, this value is the same as <code>InstructionCount</code>.</p>
ExecutionEndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time at which macro execution completed.</p>
ExecutionState	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The end state of macro execution. Possible values are</p> <ul style="list-style-type: none"> <li>• SUCCESS</li> <li>• FAILURE</li> <li>• CANCELED</li> </ul>
FailureReason	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> If <code>ExecutionState</code> is failure, this field stores the reason for the failure. Possible values are:</p> <ul style="list-style-type: none"> <li>• ACCESS</li> <li>• GENERIC</li> <li>• TIMEOUT</li> <li>• UNSUPPORTED</li> </ul>
FolderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the folder containing the macro at the time it was used.</p>
InstructionCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of instructions in the macro at the start of execution.</p>
IsFromBulk	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If true, the macro was run as a bulk macro. When a bulk macro is run on multiple records, usage is recorded per record.</p>

Field	Details
MacroID	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the macro.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Name of the macro.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the group or user that owns the macro.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the user that ran the macro.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [MacroUsageOwnerSharingRule](#)

Sharing rules are available for the object.

### [MacroUsageShare](#)

Sharing is available for the object.

## MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- All users can view this object, but you need the “Customize Application” permission to modify it.
- Customer Portal users can’t access this object.

## Fields

Field	Details
Body	<p><b>Type</b> base64</p> <p><b>Properties</b> Create</p> <p><b>Description</b> Required. Microsoft Word document to use as a mail merge template. Due to limitations with Microsoft Word mail merge templates, your client application can specify the Body field when creating these records, but not when updating them. Limit: 5 MB.</p>
BodyLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Length of the Microsoft Word document.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required. Text description of this mail merge template. Limit: 255 characters.</p>
Filename	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> Required. File name of the Microsoft Word document that was uploaded as a mail merge template. Limit: 255 characters in length.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
LastUsedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when this MailmergeTemplate was last used.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name of this mail merge template.</p>
SecurityOptionsAttachmentHasFlash	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Required. True if Flash Injection was detected in the attachment.</p>
SecurityOptionsAttachmentHasXSSThreat	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Required. True if a cross site scripting threat was detected in the attachment.</p>
SecurityOptionsAttachmentScannedforFlash	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Required. True if the attachment has been scanned for Flash Injection.</p>
SecurityOptionsAttachmentScannedForXSS	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Required. True if the attachment has been scanned for a cross site scripting threat.</p>

## Usage

Use this object to manage mail merge templates for your organization.

SEE ALSO:

[Object Basics](#)

## MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
AssetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The asset associated with the maintenance asset.</p>
ContractLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Contract line item associated with the maintenance asset. This field can only list a contract line item that is associated with the asset, and whose parent service contract is associated with the parent maintenance plan.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the maintenance asset was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product request was last viewed.</p>
MaintenanceAssetNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-assigned number that identifies the maintenance asset.</p>
MaintenancePlanId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Maintenance plan associated with the maintenance asset.</p>

Field Name	Details
NextSuggestedMaintenanceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The suggested date of service for the maintenance asset's first work order (not the date the work order is created). This corresponds to the work order's <code>SuggestedMaintenanceDate</code>. If left blank when the maintenance asset is created, this field inherits its initial value from the related maintenance plan.</p> <p>This field auto-updates after each batch is generated. Its label in the user interface is Date of the first work order in the next batch.</p>
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Work type associated with the maintenance asset. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MaintenanceAssetFeed

Feed tracking is available for the object.

### MaintenanceAssetHistory

History is available for tracked fields of the object.

## MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The associated account, which typically represents the customer receiving the maintenance service.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The associated contact.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A brief description of the plan.</p>
DoesAutoGenerateWorkOrders	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Turns on auto-generation of work order batches for a maintenance plan and prohibits the manual generation of work orders via the Generate Work Orders action. If this option is selected, a new batch of work orders is generated for the maintenance plan on the <code>NextSuggestedMaintenanceDate</code> listed on each maintenance asset, or on the maintenance plan if no assets are included. If a <code>GenerationHorizon</code> is specified, the date of generation is that many days earlier.</p>

Field Name	Details
DoesGenerateUponCompletion	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If both this option and <code>DoesAutoGenerateWorkOrders</code> are set to true, a new batch of work orders isn't generated until the last work order generated from the maintenance plan is completed. A work order is considered completed when its status falls into one of the following status categories: Cannot Complete, Canceled, Completed, or Closed.</p> <p>If a maintenance plan covers multiple assets, work orders are generated per asset. If a maintenance asset's final work order is completed late, its work order generation is delayed, which may cause a staggered generation schedule between maintenance assets.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last day the maintenance plan is valid.</p>
Frequency	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> (Required) Amount of time between work orders. The unit is specified in the <code>FrequencyType</code> field.</p>
FrequencyType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> (Required) The unit of frequency:</p> <ul style="list-style-type: none"> <li>• Days</li> <li>• Weeks</li> <li>• Months</li> <li>• Years</li> </ul> <p>For example, to perform monthly maintenance visits you need a work order for each visit, so enter 1 as the <code>Frequency</code> and select Months.</p>

Field Name	Details
GenerationHorizon	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Moves up the timing of batch generation if <code>DoesAutoGenerateWorkOrders</code> is set to true. A generation horizon of 5 means the new batch of work orders is generated 5 days before the maintenance asset's (or maintenance plan's, if there are no assets) <code>NextSuggestedMaintenanceDate</code>. The generation horizon must be a whole number.</p>
GenerationTimeframe	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> (Required) How far in advance work orders are generated in each batch. The unit is specified in the <code>GenerationTimeframeType</code> field.</p>
GenerationTimeframeType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> (Required) The generation timeframe unit:</p> <ul style="list-style-type: none"> <li>• Days</li> <li>• Weeks</li> <li>• Months</li> <li>• Years</li> </ul> <p>For example, if you need work orders for six months, enter 6 and select Months.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>

Field Name	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Where the service takes place.</p>
MaintenancePlanNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) An auto-assigned number that identifies the maintenance plan.</p>
MaintenancePlanTitle	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A name for the maintenance plan.</p>
MaintenanceWindowEndDays	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Days after the suggested service date on the work order that its service appointment can be scheduled.</p>
MaintenanceWindowStartDays	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

## Field Name

## Details

**Description**

Days before the suggested service date on the work order that its service appointment can be scheduled.

The maintenance window start and end fields affect the Earliest Start Permitted and Due Date fields on the maintenance plan's work orders' service appointments. For example, if you enter 3 for both the maintenance window start and end, the Earliest Start Permitted and the Due Date will be 3 days before and 3 days after, respectively, the Suggested Maintenance Date on each work order. If the maintenance window fields are left blank, the service appointment date fields list their work order's suggested maintenance date.

NextSuggestedMaintenanceDate

**Type**

date

**Properties**

Create, Filter, Group, Sort, Update

**Description**

The suggested date of service for the first work order (not the date the work order is created). This corresponds to the work order's

SuggestedMaintenanceDate. You can use this field to enforce a delay before the first maintenance visit (for example, if monthly maintenance should begin one year after the purchase date). Its label in the user interface is Date of the first work order in the next batch.

For example, if you want the first maintenance visit to take place on May 1, enter May 1. When you generate work orders, the earliest work order will list a suggested maintenance date of May 1, and the dates on the later work orders will be based on the GenerationTimeframe and Frequency.

**Important:** Maintenance assets also list a

NextSuggestedMaintenanceDate, which is initially inherited from the maintenance plan. If the plan has maintenance assets, this date auto-updates on the maintenance assets after each batch is generated, but doesn't update on the maintenance plan itself because batch timing is calculated at the maintenance asset level. If the plan doesn't have maintenance assets, this date auto-updates on the maintenance plan after each batch is generated.

OwnerId

**Type**

reference

**Properties**

Create, Defaulted on create, Filter, Group, Sort, Update

**Description**

The owner of the maintenance plan.

Field Name	Details
ServiceContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service contract associated with the maintenance plan. The service contract can't be updated if any child maintenance asset is associated with a contract line item from the service contract.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The first day the maintenance plan is valid.</p>
SvcApptGenerationMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The service appointment generation method.</p> <ul style="list-style-type: none"> <li>• One service appointment per work order</li> <li>• One service appointment per work order line item</li> </ul> <p>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.</p> <p>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.</p> <p>If Work Order Generation Method is set to One work order line item per asset, you must select a Service Appointment Generation Method.</p>
WorkOrderGenerationMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The work order generation method.</p> <ul style="list-style-type: none"> <li>• One work order per asset</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>One work order line item per asset</li> </ul> <p>If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods.</p> <p>If Work Order Generation Method is left as None, the generation is defaulted to one work order per asset.</p> <p>When One work order line item per asset is set, and all maintenance assets have the same Next Suggested Maintenance Date on the maintenance plan, they are grouped in one work order. However, if maintenance assets have different Next Suggested Maintenance Dates, multiple work orders are created for each date.</p> <p>If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.</p>
WorkOrderGenerationStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> (Read Only) Indicates whether the work order generation is in progress or complete. You can generate only one batch at a time.</p>
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The associated work type. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MaintenancePlanFeed

Feed tracking is available for the object.

### MaintenancePlanHistory

History is available for tracked fields of the object.

### MaintenancePlanOwnerSharingRule

Sharing rules are available for the object.

**MaintenancePlanShare**

Sharing is available for the object.

## MarketingForm

---

Represents a Pardot marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set.

## Fields

Field Name	Details
CampaignId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related campaign.</p>
ErrorRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of views that led to an error.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when the current user last viewed a record that is related to this form.</p>

Field Name	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the marketing form.</p>
SubmissionRate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of the views that led to a form submission.</p>
TotalErrors	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times a form error prevented a submission.</p>
TotalSubmissions	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times the form was successfully submitted.</p>
TotalTrackedLinkClicks	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of link clicks from your thank you page.</p>
TotalViews	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of times your form has been viewed. Includes multiple views from the same visitor.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies the type of marketing form record, either a form or form handler.</p>
UniqueErrors	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of errors generated by separate visitors.</p>
UniqueSubmissions	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of unique submissions. Removes multiple submissions from the same prospect.</p>
UniqueTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The total number of unique link clicks from your thank you page. Removes multiple clicks from the same prospect.</p>
UniqueViews	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The number of form views by separate visitors.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MarketingFormFeed

Feed tracking is available for the object.

## MarketingLink

Represents a Pardot marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Special Access Rules

To access this object, your org must use Pardot and users need the CRM User or Sales User permission set.

## Fields

Field Name	Details
CampaignId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the related campaign.</p>

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when the current user last viewed a record that is related to this marketing link.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the marketing link.</p>
TargetUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The target URL of the marketing link.</p>
TotalTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of clicks for the redirect. Includes clicks from visitors and identified prospects. When a person clicks the link multiple times, each click is counted in this number.</p>

Field Name	Details
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies the type of marketing link record, either a custom redirect or file.</p>
UniqueTrackedLinkClicks	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of unique clicks for the redirect. Includes clicks from visitors and identified prospects. Only the first click is counted in this number.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MarketingLinkFeed

Feed tracking is available for the object.

## MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule compares field values to determine whether a record is similar enough to existing records to be considered a duplicate. For example, a matching rule can specify that if the `Email` and `Phone` values of two records match exactly, the records are possible duplicates. Your organization uses matching rules with duplicate rules to define what happens when duplicates are identified.

If the rule is for a Person Account, `SubjectSubType` is automatically set to `PersonAccount`.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
BooleanFilter	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Specifies filter logic conditions.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The description of the matching rule.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The developer name for the matching rule.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language selected for your organization.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the matching rule.</p>
MatchEngine	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The match engine used by the matching rule.</p>
NamespacePrefix	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix for matching rules for your organization.</p>
RuleStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Required. The activation status of the matching rule. Values are:</p> <ul style="list-style-type: none"> <li>• <i>Inactive</i></li> <li>• <i>Deactivating</i></li> <li>• <i>DeactivationFailed</i></li> <li>• <i>Active</i></li> <li>• <i>Activating</i></li> <li>• <i>ActivationFailed</i></li> </ul> <p> <b>Important:</b> The only valid values you can declare when deploying a package are <i>Active</i> and <i>Inactive</i>.</p>
SubjectSubType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable Restricted picklist, Sort</p> <p><b>Description</b> Read-only. Indicates if the matching rule is defined for the <code>Person</code> subtype of <code>Account</code>. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>PersonAccount</code></li> <li>• <code>None</code></li> </ul> <p>If the rule is for a Person Account, <code>SubjectSubType</code> is automatically set to <code>PersonAccount</code>.</p>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The object for the matching rule.</p>

## Usage

Use the Salesforce API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

[MatchingRuleItem](#)

[DuplicateRule](#)

[MatchingRule in the Salesforce Metadata API Developer's Guide](#)

## MatchingRuleItem

---

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule item determines which field the matching rule uses to identify a duplicate record. It also determines the method used to compare value that two records have for the field. For example, a matching rule item might specify that the `Email` field values of two records must match exactly in order for the records to be considered duplicates.

When a matching rule has multiple matching rule items, it means that multiple fields must match in order for the records to be identified as dupcliates.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
<code>BlankValueBehavior</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies how blank fields affect whether the fields being compared are considered matches. Valid values are:</p> <ul style="list-style-type: none"> <li><code>MatchBlanks</code></li> <li><code>NullNotAllowed</code> (default)</li> </ul>
<code>Field</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates which field to compare when determining if a record is similar enough to an existing record to be considered a match.</p>
MatchingMethod	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Defines how the fields are compared. Choose between the exact matching method and various fuzzy matching methods. Valid values are:</p> <ul style="list-style-type: none"> <li>• <i>Exact</i></li> <li>• <i>FirstName</i></li> <li>• <i>LastName</i></li> <li>• <i>CompanyName</i></li> <li>• <i>Phone</i></li> <li>• <i>City</i></li> <li>• <i>Street</i></li> <li>• <i>Zip</i></li> <li>• <i>Title</i></li> </ul> <p>For details on each matching method, see “Matching Methods Used with Matching Rules” in the Salesforce Help.</p>
MatchingRuleId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID for the matching rule.</p>
SortOrder	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The order of the matching rule items for a matching rule.</p>

## Usage

Use the Salesforce SOAP API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

[DuplicateRule](#)

[MatchingRule in the Salesforce Metadata API Developer's Guide](#)

## MessagingChannel

---

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
BusinessHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The operating hours for your business, when agents are available. Available only in orgs that use Einstein Bots.</p>
ConsentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of consent, or opt-in, that is required to message users on this channel. This field is available in API version 48.0 and later. Possible values are:</p> <ul style="list-style-type: none"> <li>• DoubleOptIn</li> <li>• ExplicitOptIn</li> <li>• ImplicitOptIn (default value)</li> </ul>

Field Name	Details
ConversationEndResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Automated response to the customer when the agent ends the conversation. (Optional)</p>
CriticalWaitTime	<p><b>Description</b> Reserved for future use.</p>
Description	<p><b>Description</b> Reserved for future use.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The developer name for the messaging channel. This value is a concatenation of the messaging platform key and the message type.</p>
DoubleOptInPrompt	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Automated response to the end user to prompt them to doubly opt in to receiving messages.</p>
EngagedResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Automated response to the customer when the conversation is accepted by the agent. (Optional)</p>
InitialResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field Name	Details
	<p><b>Description</b> First automated response to the customer for a new conversation. (Optional)</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether a channel is active and can receive messages.</p>
IsAuthenticated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether a user is authenticated to a voice assistant.</p>
IsLinkedRecordOpenedAsSubTab	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether to show the contact as a subtab.</p>
IsoCountryCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Two-letter ISO 3166-1 alpha-2 code for the country that the phone number is associated with. For example, the code for United States is <code>US</code>.</p>
IsRequireDoubleOptIn	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether double opt-in is required (<code>true</code>) or not (<code>false</code>) for this Messaging channel.</p>

Field Name	Details
IsRestrictedToBusinessHours	<p><b>Description</b> Reserved for future use.</p>
IsUserMatchByExternalIdOnly	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether to restrict matching on customer by external ID only (and not use the full name).</p>
Language	<p><b>Description</b> Reserved for future use.</p>
LinkingPreference	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Preference for linking a new user that sends a message using this channel. Currently supports contact linking.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Unique name for the <code>MessagingChannel</code>.</p>
MessageType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of message. Possible values are:</p> <ul style="list-style-type: none"> <li>• Facebook</li> <li>• Phone</li> <li>• Text</li> <li>• WhatsApp</li> </ul>

Field Name	Details
MessagingPlatformKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Unique key for a channel that the end user can message.</p>
OfflineAgentsResponse	<p><b>Description</b> Reserved for future use.</p>
OptInPrompt	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Automated response to the end user to prompt them to explicitly opt in to receiving messages.</p>
OptInResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Defaulted on create, Nillable, Update</p> <p><b>Description</b> Automated response to the end user when they opt in to messaging. Maximum API version 48.0</p>
OptOutResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Defaulted on create, Nillable, Update</p> <p><b>Description</b> Automated response to the end user when they opt out of messaging. Maximum API version 48.0</p>
OutsideBusinessHoursResponse	<p><b>Description</b> Reserved for future use.</p>
RoutingConfigurationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Specifies which Omni-Channel routing configuration to use. This field is required when <code>RoutingType</code> is <code>OmniSkills</code>. To learn more, see <a href="#">Create Routing Configurations</a>.</p>
<code>RoutingType</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Type used to support Omni-Channel's different routing methods.</p> <ul style="list-style-type: none"> <li>• <code>OmniQueue</code> (queue-based routing)</li> <li>• <code>OmniSkills</code> (skills-based routing)</li> </ul> <p>When this value isn't set, <code>OmniQueue</code> is used.</p>
<code>TargetQueueId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Queue in which incoming conversations are placed while waiting for an agent to accept.</p>
<code>TargetUserId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Messaging User or agent for the conversation.</p>

## MessagingChannelSkill

Junction object that represents an association between `MessagingChannel` and `Skill`. This object is available in API version 45.0 and later. For example, when we want to use Omni-Channel skills-based routing in Live message, this object maintains the mapping between the messaging channel and the skill.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
MessagingChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the <a href="#">MessagingChannel</a> on page 1658.</p>
SkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the <a href="#">Skill</a> on page 2406.</p>

## MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The API name for this Messaging configuration.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The language of this Messaging configuration.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The label for the Messaging configuration.</p>
MessagingServiceUrl	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The URL for the Messaging service.</p>
ProvisioningServiceUrl	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The URL for the provisioning service.</p>

## MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

### Supported Calls

`create()`,  
`describeCompactLayouts()`,`describeLayout()`,`describeSObjects()`,`query()`,`retrieve()`,`update()`,`upsert()`

### Fields

Field	Details
CorrelationIdentifier	<p><b>Type</b></p> <p>string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>
CreatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Defaulted on createFilter, Group, Sort</p> <p><b>Description</b> ID of the user who created the error.</p>
CreatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p> <p><b>Description</b> Date the error was created.</p>
DestinationPhoneNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The recipient of the phone call.</p>
FailureReason	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The provided reason for why the message failed.</p>
FlowEntity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>
FullMessage	<p><b>Type</b> textarea</p> <p><b>Description</b> Plain error text.</p>

Field	Details
Id	<p><b>Type</b> id</p> <p><b>Properties</b> Defaulted on create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> Identifier of the error.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the error has been deleted.</p>
LastModifiedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who last modified the error log.</p>
LastModifiedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p> <p><b>Description</b> Date when the Messaging error log was last modified.</p>
MessagingChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the <a href="#">MessagingChannel</a> on page 1658.</p>
MessagingEndUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Identifier for the Messaging user.</p>

Field	Details
MessagingTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Messaging template used.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Namefield, Sort</p> <p><b>Description</b> Name of the error. Maximum length is 80 characters.</p>
SystemModstamp	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p> <p><b>Description</b> System modification time for the Messaging delivery error log.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort , Update</p> <p><b>Description</b> The kind of event that occurred.</p> <ul style="list-style-type: none"> <li>• Error (Default)</li> <li>• Warning</li> </ul>

## MessagingEndUser

---

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 45.0 and later

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the account associated with this Messaging end user.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the associated Contact.</p>
HasInitialResponseSent	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether an initial response has been sent to the Messaging end user (<code>true</code>) or not (<code>false</code>).</p>
IsFullyOptedIn	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create</p> <p><b>Description</b> Indicates whether the Messaging end user has opted in to receiving messages (<code>true</code>) or not (<code>false</code>). This field is available in API version 48.0 and later.</p>
IsOptedOut	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the Messaging end user has opted out of receiving messages. Maximum API version 48.0</p>
IsoCountryCode	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ISO country code associated with the Messaging end user.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Locale	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Reserved for future use.</p>
MessageType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type of message. Possible values are:</p> <ul style="list-style-type: none"> <li>• Facebook</li> <li>• Phone</li> <li>• Text</li> <li>• WhatsApp</li> </ul>
MessagingChannelId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Messaging channel associated with the Messaging end user.</p>
MessagingConsentStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The consent status of the messaging user. This field is available in API version 48.0 and later. Possible values are:</p> <ul style="list-style-type: none"> <li>• DoublyOptedIn</li> <li>• ExplicitlyOptedIn</li> <li>• ImplicitlyOptedIn</li> <li>• OptedOut</li> </ul>
MessagingPlatformKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The phone number or Facebook page ID associated with this Messaging end user.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the Messaging end user.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner associated with this Messaging end user.</p>
ProfilePictureUrl	<p><b>Type</b> url</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL of the Messaging end user's profile picture.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MessagingEndUserHistory

History is available for tracked fields of the object.

### MessagingEndUserOwnerSharingRule

Sharing rules are available for the object.

### MessagingEndUserShare

Sharing is available for the object.

## MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
EntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Possible values are:</p> <ul style="list-style-type: none"> <li>Account</li> <li>Case</li> <li>Contact</li> <li>CustomEntityDefinition—Custom Object Definition</li> <li>Lead</li> <li>Opportunity</li> </ul>

Field	Details
MessagingChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>
ShouldAttemptAutoLink	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>
ShouldPromptCreate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

## MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Fields

Field	Details
AcceptTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time when an agent accepts an incoming Messaging session.</p>

Field	Details
AgentMessageCount	<p><b>Type</b> int</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The number of messages sent by the agent during the session.</p>
AgentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of agent that is assigned to the Messaging session. Possible values are:</p> <ul style="list-style-type: none"> <li>• Agent</li> <li>• Bot</li> <li>• BotToAgent—Bot &amp; Agent</li> <li>• System—Used for triggered outbound messages</li> </ul>
CaseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the case associated with this Messaging session.</p>
ChannelEndUserFormula	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Nillable, Sort</p> <p><b>Description</b> A concatenation of the Messaging channel and Messaging user.</p>
ChannelGroup	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The group of the associated Messaging channel.</p>
ChannelIntent	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The intent of the associated Messaging channel.</p>
ChannelKey	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique identifier for the associated Messaging channel.</p>
ChannelLocale	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The locale of the associated Messaging channel.</p>
ChannelName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the associated Messaging channel.</p>
ChannelType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of the associated Messaging channel. Possible values are:</p> <ul style="list-style-type: none"><li>• Facebook</li><li>• Phone</li><li>• Text</li></ul>
EndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> The time when the Messaging session ended.</p>
EndUserAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the end user's account record.</p>
EndUserContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the end user's contact record.</p>
EndUserMessageCount	<p><b>Type</b> int</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The number of messages sent by the Messaging end user.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
LeadId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the Lead associated with this Messaging session.</p>
MessagingChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Messaging channel associated with this Messaging session.</p>
MessagingEndUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Messaging end user associated with this Messaging session.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of this Messaging session.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the opportunity record associated with this Messaging session.</p>
Origin	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The origin of this Messaging session. Possible values are:</p> <ul style="list-style-type: none"> <li>• AgentInitiated</li> <li>• ConversationClose</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• InboundInitiated</li> <li>• OptIn—Opt In Status Change</li> <li>• OptOut—Opt Out Status Change</li> <li>• TriggeredOutbound</li> </ul>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner associated with this Messaging session.</p>
PreviewDetails	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The preview shown to an agent for this Messaging session.</p>
SessionKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The identifier for the Messaging session.</p>
StartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The time when the Messaging session started.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the Messaging session. Possible values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Ended</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>New</li> <li>Waiting</li> </ul>
TargetUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the target user associated with this Messaging session.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [MessagingSessionFeed](#)

Feed tracking is available for the object.

### [MessagingSessionHistory](#)

History is available for tracked fields of the object.

### [MessagingSessionOwnerSharingRule](#)

Sharing rules are available for the object.

### [MessagingSessionShare](#)

Sharing is available for the object.

## MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field	Details
	<p><b>Description</b> The description of the Messaging template.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The API name for the Messaging template.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the Messaging template.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label of the Messaging template.</p>
Message	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The body text of the Messaging template.</p>

## MetadataPackage

---

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the package.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> For first-generation and second-generation managed packages, and unlocked packages with namespaces, this field is the namespace prefix assigned to the package. For unmanaged packages, or no-namespace unlocked packages, this field is blank.</p>
PackageCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of package. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Application</code> (internal use only)</li> <li>• <code>Module</code> (internal use only)</li> <li>• <code>Package</code>—Represents either an unmanaged package or a first-generation managed package.</li> <li>• <code>Package2</code>—Represents either an unlocked package or a second-generation managed package.</li> </ul> <p>The default value is <code>Package</code>.</p> <p>This field is available in API version 49.0 and later.</p>

## Usage

Here are examples of the types of API queries you can perform.

Query	String
Show all managed and unmanaged packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage</pre>
Show only managed packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage WHERE NamespacePrefix &lt;&gt; ''</pre>

## MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Fields

Field Name	Details
BuildNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The build number of the version. For example, if you upload two beta versions, they have build numbers 1 and 2. Then, when you upload a non-beta version, the build number is 3. When you upload a new version, the build number resets to 1.</p>
IsDeprecated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the package version is deprecated. Available in API version 46.0 and later.</p>
MajorVersion	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The first number in a package version number. A version number either has an <math>x.y</math> format or an <math>x.y.z</math> format. The <math>x</math> represents the major version, <math>y</math> the minor version, and <math>z</math> the patch version.</p>
MetadataPackageId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The 18-character package ID starting with 033.</p>
MinorVersion	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The second number in a package version number. A version number either has an <math>x.y</math> format or an <math>x.y.z</math> format. The <math>x</math> represents the major version, <math>y</math> the minor version, and <math>z</math> the patch version.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, idLookup, Sort</p> <p><b>Description</b></p> <p>The name of the package version.</p>
PatchVersion	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The third number in a package version number, if present. A version number either has an <math>x.y</math> format or an <math>x.y.z</math> format. The <math>x</math> represents the major version, <math>y</math> the minor version, and <math>z</math> the patch version.</p>
ReleaseState	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p>

**Field Name****Details****Description**

If the package version is a beta version, the value is Beta. Otherwise, the value is Released.

## Usage

Here are examples of the types of API queries you can perform.

**Query****String**

Get all package versions for the package that has a MetadataPackageID of 033D00000001xQlIAI

```
SELECT Id, Name, ReleaseState,
MajorVersion, MinorVersion, PatchVersion
FROM MetadataPackageVersion WHERE
MetadataPackageId = '033D00000001xQlIAI'
```

Get the package version for the package with a specific MetadataPackageID and a major version greater than 1

```
SELECT Id FROM MetadataPackageVersion WHERE
MetadataPackageId = '033D00000001xQlIAI'
AND MajorVersion > 1
```

Get released package versions for the package with a specific MetadataPackageID

```
SELECT Id FROM MetadataPackageVersion WHERE
MetadataPackageId = '033D00000001xQlIAI'
AND ReleaseState = 'Released'
```

### Java Code Sample

Suppose you want to push version 3.4.6 of your package to all orgs. Let's write some code to identify the orgs eligible for the upgrade. This example demonstrates how to generate the list of subscriber orgs eligible to be upgraded to version 3.4.6 of a package.

This code sample uses the Web Services Connector (WSC).

```
// Finds all Active subscriber orgs that have the package installed
String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from PackageSubscribers where
OrgStatus = 'Active' and InstalledStatus = 'I'";

// Finds all MetadataPackageVersions lower than the version given, including the list
// of subscribers for each version
String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState, (%s) from"
+ " MetadataPackageVersion where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
+ " AND (MajorVersion < 3 OR (MajorVersion = 3 and MinorVersion < 4))"
+ " OR (MajorVersion = 3 and MinorVersion = 4 and PatchVersion < 6)";

// conn is an EnterpriseConnection instance initialized with a ConnectionConfig object
// representing a connection to the developer org of the package
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
PACKAGE_SUBSCRIBER_ORG_KEY_QUERY));

// This list will hold all of the PackageSubscriber objects that are eligible for upgrade
// to the given version
```

```

List<PackageSubscriber> subscribers = new ArrayList<>();
for (SObject mpvso : results.getRecords()) {

    // Cast the sObject to a MetadataPackageVersion
    MetadataPackageVersion mpv = (MetadataPackageVersion) mpvso;

    // Add subscribers to our list
    if (mpv.getPackageSubscribers() != null) {
        for (SObject pssso : mpv.getPackageSubscribers().getRecords()) {
            subscribers.add((PackageSubscriber) pssso);
        }
    }
}

```

**Next Step**

Create a push request using PackagePushRequest.

## Metric

---

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

## Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

## Fields

Field Name	Details
CompletionDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The completion date of the metric.</p>
CurrentValue	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The current value of the metric.</p>
Description	<p><b>Type</b> textarea</p>

Field Name	Details
	<p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the metric. The maximum length is 65,535 characters.</p>
DueDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The due date of the metric.</p>
GoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the goal the metric is related to.</p>
InitialValue	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The initial value of the metric.</p>
IsCompletionMetric	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read only. If <code>true</code>, the metric measures whether or not the metric is finished. If <code>false</code>, the metric measures how much is finished compared to a targeted value.</p>
LastComment	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A comment that provides more context about the metric, such as its status or progress. The maximum length is 255 characters.</p>

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when a user last viewed a record that is related to this metric.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp that indicates when a user last viewed this metric. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the metric.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who owns the metric.</p>
Progress	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The overall progress of the metric.</p>
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> ID of the related record type.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The start date of the metric.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of the metric. Possible values include:</p> <ul style="list-style-type: none"> <li>• Not Started</li> <li>• On Track</li> <li>• Behind</li> <li>• Critical</li> <li>• Completed</li> <li>• Postponed</li> <li>• Canceled</li> <li>• Not Completed</li> </ul>
TargetValue	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The target value of the metric.</p>
Weight	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The weight of the metric. The sum of the weights should equal 100%.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### MetricFeed

Feed tracking is available for the object.

### MetricHistory

History is available for tracked fields of the object.

### MetricOwnerSharingRule

Sharing rules are available for the object.

### MetricShare

Sharing is available for the object.

## MetricDataLink

---

The link between the metric and the data source, such as a report.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
DatasourceFieldName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The field name of the data source, such as a report summary field.</p>
DataSourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the data source.</p>
LastSynchronizationTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The last time the data was synchronized.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The name given to the data link record.</p>
TargetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the metric that the data is linked to.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [MetricDataLinkHistory](#)

History is available for tracked fields of the object.

## MetricsDataFile

Represents a data file containing usage metrics on all installations of a managed package in a Salesforce instance. This object is available in API version 30.0 and later.

## Supported Calls

`query()`, `delete()`

## Fields

Field Name	Details
MetricsDataFile	<p><b>Type</b> base64</p> <p><b>Properties</b> Filter, Query, Sort</p>

Field Name	Details
	<p><b>Description</b> A text file containing the usage data encoded in Base 64.</p>
MetricsDataFileContentType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Query, Sort</p> <p><b>Description</b> The format of the data file. Currently, the only allowed value is <code>text/csv</code>.</p>
MetricsDataFileLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Query, Sort</p> <p><b>Description</b> The size of the data file in bytes.</p>
MetricsRunDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Query, Sort</p> <p><b>Description</b> The date when the usage metrics collection job was run.</p>
MetricsEndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Query, Sort</p> <p><b>Description</b> The end time and date for the data collection.</p>
MetricsStartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Query, Sort</p> <p><b>Description</b> The start time and date for the data collection.</p>
MetricsType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Query, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The type of data being collected. The possible values are <code>CustomObject</code> and <code>Visualforce</code>.</p>
NamespacePrefix	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Query, Sort</p> <p><b>Description</b></p> <p>The namespace prefix of the package for which data is being collected.</p>
SendingInstance	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Query, Sort</p> <p><b>Description</b></p> <p>The server instance from which this data was collected, for example, "na8."</p>

## Usage

Use this object to access customer usage metrics for a managed package. Each record contains one day's data, on either custom objects or Visualforce pages, for all organizations in a Salesforce instance that have the package installed. The following data is collected each day.

- **Custom objects** — the number of records stored in each custom object.
- **Visualforce pages** — the number of times each Visualforce page was accessed, the number of unique users who accessed it, and the average loading time (in milliseconds).

The custom objects data is a snapshot that reflects the state of the organization at the time the database was sampled, while the Visualforce data covers usage over a 24-hour period.

This feature is intended for API access only. The owner of the package must write a secondary process to retrieve the metrics data from the reporting organization, and export it to another system for analysis.

The usage metrics data for all production organizations in a given instance is merged and written into a text file, in a specified format, once a day. If an instance doesn't have any organizations with the package installed or any organizations that accessed Visualforce pages in the package, a blank record is created for that day, with `MetricsDataFileLength` set to zero.

In a record for custom objects, each row of the text file contains usage data in the following order.

- Organization ID
- Organization name
- Organization edition
- Organization status
- Name of the custom object
- Number of records of the custom object on the specified day

The custom object count is a snapshot captured once each day. Here's a section of a sample data file for custom objects. It shows there were 3500 and 1500 records in the Alpha and Beta custom objects, respectively, in the specified customer organization on the specified day.

```
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","Alpha", "3500"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","Beta", "1500"
```

In a record for Visualforce pages, each row of the text file contains usage data in the following order.

- Organization ID
- Organization name
- Organization edition
- Organization status
- Package version number
- Name of the Visualforce page
- Number of times the page was accessed
- Number of unique users who accessed the page
- Average loading time of the page, in milliseconds

The Visualforce counts for each organization measure the number of times the page was viewed in the duration between the start and end times. Here's a section of a sample data file for Visualforce pages.

```
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f1","1","1","66.0"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f2","1","1","128.0"
"00Dxx0000001gbk","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f3","1","1","107.0"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f1","5","1","73.6"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f2","1","1","72.0"
"00Dxx0000001gbf","org1","Enterprise Edition","TRIAL","1.0","/apex/gm12__f3","7","1","50.8"
```

## MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

## Fields

Field	Details
Description	Type textarea

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> A description of the milestone.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, idLookup, Update</p> <p><b>Description</b> The name of the milestone.</p>
RecurrenceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The type of recurrence for the milestone.</p>

## Usage

Use this object to query and manage the milestone type for CaseMilestone records.

SEE ALSO:

[CaseMilestone](#)

[SlaProcess](#)

## MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
FieldServiceMobileSettingsId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of a set of field service mobile settings.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the profile to associate with the set of field service mobile settings.</p>

## MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `describeSObjects()`, `delete()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

Field	Details
CustomKeywords	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The keywords a Messaging end user can send to receive the Custom Response.</p>
CustomResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field	Details
	<p><b>Description</b> The automated response sent when a Messaging end user sends a Custom Keyword.</p>
DoubleOptInKeywords	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The keywords a Messaging end user can send to doubly opt in to receiving messages.</p>
HelpKeywords	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The keywords a Messaging end user can send to request help during a Messaging session.</p>
HelpResponse	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The automated response sent when a Messaging end user requests help.</p>
MasterLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language used for this consent configuration.</p>
MessagingChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the associated Messaging channel.</p>
OptInConfirmation	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p>

Field	Details
	<p><b>Description</b> The automated response sent when a Messaging end user opts in to receiving messages.</p>
OptInKeywords	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The keywords a Messaging end user can send to explicitly opt in to receiving messages.</p>
OptOutConfirmation	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The automated response sent when a Messaging end user opts out of receiving messages.</p>
OptOutKeywords	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The keywords a Messaging end user can send to opt out of receiving messages.</p>

## MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field Name	Details
ApexHandlerId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the Apex handler that contains the Discovery authentication logic.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
ExecuteApexHandlerAsId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the user who is executing the handler. Requires Manage User permission.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the <code>MasterLabel</code>. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>da</code> (Danish)</li> <li>• <code>de</code> (German)</li> <li>• <code>en_US</code> (English)</li> <li>• <code>es</code> (Spanish)</li> <li>• <code>es_MX</code> (Spanish - Mexican)</li> <li>• <code>fi</code> (Finnish)</li> <li>• <code>fr</code> (French)</li> <li>• <code>it</code> (Italian)</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• ja (Japanese)</li> <li>• ko (Korean)</li> <li>• nl_NL (Dutch)</li> <li>• no (Norwegian)</li> <li>• pt_BR (Portuguese - Brazilian)</li> <li>• ru (Russian)</li> <li>• sv (Swedish)</li> <li>• th (Thai)</li> <li>• zh_CN (Chinese - Simplified)</li> <li>• zh_TW (Chinese - Traditional)</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the action link group template.</p>
UsernameLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Login prompt on login page when the My Domain login page type is Discovery. It supports localization with custom labels.</p>

## Usage

Use this object to access the My Domain Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. My Domain Login Discovery performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

## MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup . This object is available in API version 46.0 and later.

Use a muting permission set with a permission set group to mute certain permissions. For instance, you have a subscriber org using a managed package that contains a permission set group. To use the existing permission set group, the subscriber org can disable specific

permissions with a muting permission set. Or, perhaps you have a permission set group that contains several permission sets managed by different departments. Use a muting permission set to disable specific permissions based on your organization's needs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

## Fields

Field Name	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the muting permission set. Possible values are:</p> <ul style="list-style-type: none"> <li>• da (Danish)</li> <li>• de (German)</li> <li>• en_US (English)</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <code>es</code> (Spanish)</li> <li>• <code>es_MX</code> (Spanish - Mexican)</li> <li>• <code>fi</code> (Finnish)</li> <li>• <code>fr</code> (French)</li> <li>• <code>it</code> (Italian)</li> <li>• <code>ja</code> (Japanese)</li> <li>• <code>ko</code> (Korean)</li> <li>• <code>nl_NL</code> (Dutch)</li> <li>• <code>no</code> (Norwegian)</li> <li>• <code>pt_BR</code> (Portuguese - Brazilian)</li> <li>• <code>ru</code> (Russian)</li> <li>• <code>sv</code> (Swedish)</li> <li>• <code>th</code> (Thai)</li> <li>• <code>zh_CN</code> (Chinese - Simplified)</li> <li>• <code>zh_TW</code> (Chinese - Traditional)</li> </ul>
<code>MasterLabel</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The muting permission set label for the aggregated, disabled permissions.</p>

## Usage

Use `MutingPermissionSet` to disable specified permissions within a permission set group.

## Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

This object is used to retrieve information from related records where the related record may be from more than one object type (a polymorphic foreign key). For example, the owner of a case can be either a user or a group (queue). This object allows retrieval of the owner name, whether the owner is a user or a group (queue). You can use a `describe` call to access the information about parents for an object, or you can use the `who`, `what`, or `owner` fields (depending on the object) in SOQL queries. This object cannot be directly accessed.

## Supported Calls

`describeSObjects()`

## Fields

Field	Details
Alias	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user alias. This field contains a value only if the related record is a user.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The email address of the user or group (queue).</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The first name of the user, contact, or lead.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the related record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the related record is a user.</p>
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The last name of the user, contact, or lead.</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MiddleName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The middle name of the user, contact, or lead.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the parent of the object queried. If the parent is a user, contact, or lead, the value is a concatenation of the <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> fields of the related record.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The phone number of the user. This field contains a value only if the related record is a user.</p>
Profile	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The Profile of the user. Only populated if the related record is a user.</p>

Field	Details
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the user's Profile. Only populated if the related record is a user.</p>
Suffix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name suffix of the user, contact, or lead.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The title of the user, for example CFO or CEO.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> A list of the types of sObjects that can be an owner of this object. You can use this field to filter on a type of owner, for example, return only the leads owned by a user.</p>
Username	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Contains the name that a user enters to log into the API or the user interface. The value for this field is in the form of an email address, and is only populated if the related record is a user.</p>
UserRole	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Nillable</p>

Field	Details
	<p><b>Description</b></p> <p>Name of the <code>Role</code> played by the user. Only populated for user rows.</p>
<code>UserRoleId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the user role associated with this object.</p>

## Usage

To query on relationships where the parent may be more than one type of object, use `who`, `what`, or `owner` relationship fields.

[Object Basics](#)

## NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

 **Note:** All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
<code>AuthProviderId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system.</p> <p>Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field.</p> <p>This field is available in API version 39.0 and later.</p>
CalloutOptionsAllowMergeFieldsInBody	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>For Apex callouts, indicates whether the code can use merge fields to populate HTTP request bodies with org data.</p> <p>This field is available in API version 35.0 and later.</p>
CalloutOptionsAllowMergeFieldsInHeader	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>For Apex callouts, indicates whether the code can use merge fields to populate HTTP headers with org data.</p> <p>This field is available in API version 35.0 and later.</p>
CalloutOptionsGenerateAuthorizationHeader	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether Salesforce automatically generates a standard authorization header for each callout to the named credential–defined endpoint.</p> <p>This field is available in API version 35.0 and later.</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
Endpoint	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Nullable</p> <p><b>Description</b></p> <p>The root URL of the endpoint.</p>
Language	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The language of the <code>MasterLabel</code>.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The master label for the named credential. This display value is the internal label that doesn't get translated.</p>
NamespacePrefix	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nullable, Sort</p> <p><b>Description</b></p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code><b>namespacePrefix__componentName</b></code> notation.</p>

Field Name	Details
PrincipalType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Tracks users who are accessing the external system. <code>Anonymous</code> implies that a user identity isn't specified for external system access. <code>Named Principal</code> uses one user identity for all users to access the external system.</p>

## Usage

Use the `NamedCredential` object to query named credentials in your organization.

## NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The name of this namespace registry entry.</p>
NamespaceOrg	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The org ID of the Developer Edition org where you've registered the namespace you want to link.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The namespace prefix that you want to link to the scratch org.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [NamespaceRegistryFeed](#)

Feed tracking is available for the object.

### [NamespaceRegistryHistory](#)

History is available for tracked fields of the object.

## NavigationLinkSet

Represents the navigation menu in a community. A navigation menu consists of items that users can click to go to other parts of the community. This object is available in API version 35.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

`create()`, `delete()`, `update()`, and `upsert()` are available in API version 45.0 and later.

## Special Access Rules

Navigation menus are available only in communities created using the Customer Service template.

## Fields

Field Name	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later.</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Create, Defaulted on create, Nillable, and Update are available in API version 45.0 and later.</p> <p><b>Description</b> Language for the navigation menu. Valid values are:</p> <ul style="list-style-type: none"><li>• Chinese (Simplified): zh_CN</li><li>• Chinese (Traditional): zh_TW</li><li>• Danish: da</li><li>• Dutch: nl_NL</li><li>• English: en_US</li><li>• Finnish: fi</li><li>• French: fr</li><li>• German: de</li><li>• Italian: it</li><li>• Japanese: ja</li><li>• Korean: ko</li><li>• Norwegian: no</li><li>• Portuguese (Brazil): pt_BR</li><li>• Russian: ru</li><li>• Spanish: es</li></ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations.</li> <li>Swedish: <code>sv</code></li> <li>Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later.</p> <p><b>Description</b> Label for the navigation menu.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort Create is available in API version 45.0 and later. Update is available in API versions 45.0 to 47.0.</p> <p><b>Description</b> ID of the community.</p>

## NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your community's navigation menu. This object is available in API version 35.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

Navigation menus are available only in communities created using the Lightning community template. To use navigation menus in the Build Your Own template, you must build a custom navigation menu component.

## Fields

Field Name	Details
AccessRestriction	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Determines if the menu item is available to guest users who aren't required to log in to the community.</p>
DefaultListViewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> If the value of the <code>Type</code> field is <code>SalesforceObject</code>, the value is the ID of the default list view for the object.</p>
DraftRowID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the draft navigation menu item. The ID is unique within your organization.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The text that appears in the navigation menu for this item.</p>
NavigationLinkSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The navigation menu that this item is included in.</p>
Position	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The location of the menu item in the navigation menu.</p>
Status	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents if the navigation menu item is published or not. The values can only be DRAFT, LIVE, or null. In API versions 42 and earlier, if the Status field is not set, the field defaults to LIVE. When queried and Status is not part of the query filter, only the NavigationMenuItem objects with a status of LIVE return. In API versions 43 and later, if the Status field is not set, the field defaults to DRAFT. When queried and Status is not part of the query filter, all NavigationMenuItem objects return regardless of status.</p>
Target	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>Type</code> is ExternalLink or InternalLink, the target is the URL that the link points to. For ExternalLink, your entry looks like this: <i>http://www.salesforce.com</i>. For InternalLink, use a relative URL, such as <i>/contactsupport</i>.</p>
TargetPrefs	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> If <code>Type</code> is ExternalLink, determines whether a navigation menu item opens in the same tab.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of navigation menu item. The available values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <b>SalesforceObject</b>—Available objects include accounts, cases, contacts, and custom objects.</li> <li>• <b>ExternalLink</b>—Links to a URL outside of your community. For example, <i>http://www.salesforce.com</i>.</li> <li>• <b>Event</b></li> <li>• <b>GlobalAction</b>—Enables users to create object records, but the new record has no relationship with other records.</li> <li>• <b>InternalLink</b>—Links to a relative URL inside your community. For example, <i>/contactsupport</i>.</li> <li>• <b>NavigationalTopic</b>—A dropdown list with links to the navigational topics in your community.</li> <li>• <b>SystemLink</b></li> </ul>

## Usage

You can add up to 20 navigation menu items. You can translate navigation menu items using the Translation Workbench.

## NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in a community. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Navigation menus are available only in communities created using the Lightning community template. To use navigation menus in the Build Your Own template, you must build a custom navigation menu component.

## Fields

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language of the translated navigation menu item. The picklist contains the following supported languages:</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Chinese (Simplified): zh_CN</li> <li>• Chinese (Traditional): zh_TW</li> <li>• Danish: da</li> <li>• Dutch: nl_NL</li> <li>• English: en_US</li> <li>• Finnish: fi</li> <li>• French: fr</li> <li>• German: de</li> <li>• Italian: it</li> <li>• Japanese: ja</li> <li>• Korean: ko</li> <li>• Norwegian: no</li> <li>• Portuguese (Brazil): pt_BR</li> <li>• Russian: ru</li> <li>• Spanish: es</li> <li>• Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.</li> <li>• Swedish: sv</li> <li>• Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.</li> </ul>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b>namespacePrefix__componentName</b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>

Field Name	Details
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the navigation menu item that this translated value applies to.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The translated text for the navigation menu item. Label is <b>Translation Text</b>.</p>

## Network

---

Represents a community. Communities are branded spaces for your employees, customers, and partners to connect. You can customize and create communities to meet your business needs, then transition seamlessly between them. Communities let you share information, records, and files with coworkers and external stakeholders all in one place. This object is available in API version 26.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available only if Salesforce Communities are enabled in your org.

## Fields

Field Name	Details
AllowedExtensions	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Specifies the types of files allowed in your community. This list of file types lets you control what your community members upload and also prevents spammers from polluting your community with inappropriate files. Available in API version 36.0 and later.</p>

Field Name	Details
	Separate file types with a comma (for example: <i>jpg, docx, txt</i> ). You can enter lowercase and uppercase letters. You can enter up to 1,000 characters. To allow all file types, leave this field empty.
CaseCommentEmailTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the email template used when submitting a comment on a case. This field is available in API version 28.0 and later.</p>
ChangePasswordEmailTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the email template used when notifying users that their password has been reset.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the community.</p>
EmailFooterLogoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Document object that displays as an image in the footer of community Chatter emails.</p>
EmailFooterText	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Text that displays in the footer of community Chatter emails.</p>

Field Name	Details
EmailSenderAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Read only. Email address from which community emails are sent.</p> <p> <b>Note:</b> To change the EmailSenderAddress value, you must first specify NewSenderAddress, which triggers the sending of an address change verification email. After you complete the address verification process, EmailSenderAddress changes to the specified NewSenderAddress.</p>
EmailSenderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> Name from which community emails are sent.</p>
FirstActivationDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date the community was first activated. This field is available in API version 34.0 and later. If the community was activated or inactive before the release of API version 34.0, this field returns the date that the community was first created.</p>
ForgotPasswordEmailTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the email template used when users forget their password.</p>
LockoutEmailTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>ID of the email template used when users try to reset their password after locking themselves out of their community from too many login attempts. This field is available in API version 43.0 and later.</p>
MaxFileSizeKb	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Specifies the maximum file size (in KBs) that members can upload in your community. Available in API version 36.0 and later.</p> <p>Enter a number between 3072 KB and your org's maximum file size. To use the default limit of 2 GB, leave this field empty.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The name of the community.</p>
NewSenderAddress	<p><b>Type</b></p> <p>email</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Email address that has been entered as the new value for <code>EmailSenderAddress</code> but has not been verified yet. After a user has requested to change the sender email address and has successfully responded to the verification email, the <code>NewSenderAddress</code> value overwrites the value in <code>EmailSenderAddress</code>. This value becomes the email address from which community emails are sent.</p> <p> <b>Note:</b></p> <ul style="list-style-type: none"> <li>• If verification is pending for a new email address and you set <code>NewSenderAddress</code> to null, the verification request is canceled.</li> <li>• <code>NewSenderAddress</code> is automatically set to null after <code>EmailSenderAddress</code> has been set to the new verified address.</li> <li>• If verification is pending for a new email address, and you specify a different new address for this field, only the latest value is retained and used for verification.</li> </ul>

Field Name	Details
OptionsAllowInternalUserLogin	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Specifies whether internal users can log in with their internal credentials on the community login page. This field is available in API version 37.0 and later.</p>
OptionsAllowMembersToFlag	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether users can flag posts, comments, or files as inappropriate in the community.  This field is available in API version 29.0 and later. The ability to flag files is available in version 30.0 and later.</p>
OptionsEnableTalkingAboutStats	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether community users see how many people are discussing a topic. The number of people discussing the topic appears as the user types the topic and the system gives topic suggestions.  This field is available in API version 41.0 and later. The ability to flag files is available in version 30.0 and later.</p>
OptionsGuestChatterEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Specifies whether guest users can access public Chatter groups in the community without logging in.</p>
OptionsInvitationsEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p>

Field Name	Details
	<p><b>Description</b> Determines whether users can invite others to the community.</p>
OptionsKnowledgeableEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether users can see knowledgeable people for topics and endorse people for topics.</p>
OptionsMemberVisibility	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Controls community user visibility on a per-community basis. If true, the Community User Visibility preference is enabled for the selected community. This field is available in API version 45.0 and later.</p>
OptionsMobileImageOptimizationEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> If true, file asset images are optimized for mobile display. This field is available in API version 45.0 and later.</p>
OptionsNicknameDisplayEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether user nicknames display instead of their first and last names in most places in the community. A few restrictions to keep in mind about nickname display:</p> <ul style="list-style-type: none"> <li>• Records and user lookups on records show full names. Keep in mind, though, that you can control record and user visibility with sharing rules.</li> <li>• Mobile notifications in the Salesforce mobile app show full names. You can turn off mobile notifications in the app to avoid this display.</li> <li>• Searches by first, last, and full names aren't restricted and return matches, but the search results display only nicknames. Global search auto-complete</li> </ul>

Field Name	Details
	recommendations show any first, last, and full names that the user has searched by or accessed via a record or another location. The recent items list also shows first, last, and full under the same conditions.
OptionsPrivateMessagesEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether users can send and receive Chatter messages in the community.</p>
OptionsRecognitionBadgingEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether Recognition Badges is enabled for the community.</p>
OptionsReputationEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines if reputation is calculated and displayed for community members. This field is available in API version 31.0 and later.</p>
OptionsSelfRegistrationEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether external users can self-register to join the community. External users are users with External Identity, Community, Customer Portal, or partner portal licenses. If <code>true</code>, displays a <b>Not a member?</b> link on the login page that points to the default self-registration page. This field is available in API version 28.0 and later.</p>
OptionsSendWelcomeEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Determines whether a welcome email is sent when a new user is added to the community.</p>
OptionsShowAllNetworkSettings	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>Determines whether settings in Community Management Community Management that were hidden based on how you set up your community are visible or remain hidden.</p> <p>This field is available in API version 33.0 and later.</p>
OptionsSiteAsContainerEnabled	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>Determines whether the community uses Site.com pages instead of Visualforce tabs.</p> <p>This field is available in API version 29.0 and later.</p>
OptionsThreadedDiscussionsEnabled	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>Indicates whether threaded discussions are enabled for the community. Available in API version 44.0 and later.</p>
OptionsTopicSuggestionsEnabled	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>Enables topic suggestions when users write posts.</p> <p>This field is available in API version 41.0 and later. The ability to flag files is available in version 30.0 and later.</p>
OptionsUpDownVoteEnabled	<p><b>Type</b></p> <p>boolean</p>

Field Name	Details
	<p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Determines whether up and down voting is enabled for the community.  This field is available in API version 41.0 and later.</p>
SelfRegProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the profile assigned to users who self-register. Only applies if self-registration is enabled for the community.  This field is available in API version 29.0 and later.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Status of the community. Available values are:</p> <ul style="list-style-type: none"> <li>• <b>Live</b>—The community is online and members can access it. Label is <code>Published</code>.</li> <li>• <b>DownForMaintenance</b>—The community was previously published, but was taken offline. Members with “Create and Set Up Communities” can still access the setup for offline communities regardless of profile or membership. Members are not able to access offline communities, but they still appear in the user interface dropdown menu as <code>CommunityName (Offline)</code>. Label is <code>Offline</code>.</li> <li>• <b>UnderConstruction</b>—The community has not yet been published. Users with “Create and Set Up Communities” can access communities in this status if their profile is associated with the community.  After a community is published, it can never be in this status again. Label is <code>Preview</code>.</li> </ul>
UrlPathPrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The <code>UrlPathPrefix</code> is a unique string at the end of the URL for this community. For example, in the community URL <code>UniversalTelco.force.com/customers</code>, <code>customers</code> is the <code>UrlPathPrefix</code>.</p>
<code>VerificationEmailTemplateId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>ID of the email template used when users must verify their identity, for example, when they log in without a password or from a new device. This field is available in API version 44.0 and later.</p>
<code>WelcomeEmailTemplateId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the email template used when sending welcome emails to new community members.</p>

## Usage

Use this object to find, view, and update communities in your org. If you have `Modify All Data`, `View All Data`, or `Create and Set Up Communities` permission, you can view all communities in the org. Users without these permissions see only the `Preview` or `Published` communities that they're members of. If you have `Create and Set Up Communities` permission, you can customize community settings.

## NetworkActivityAudit

Represents an audit trail of moderation actions in Communities. This object is available in API version 30.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if Salesforce Communities are enabled in your org.

## Fields

Field Name	Details
Action	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The moderation action a member performed on a post, comment, or file in a community.</p> <p>Values are:</p> <ul style="list-style-type: none"> <li>• Flagged as Inappropriate—A community member flagged a post, comment, or file as inappropriate.</li> <li>• Flagged as Spam - A community member flagged a post, comment, or file as spam.</li> <li>• Unflagged—A community member removed the flag from a post, comment, or file.</li> <li>• RemovedFlags—A moderator removed all flags from a post, comment, or file.</li> <li>• DeletedFlaggedItem—A moderator deleted a flagged post, comment, message, or file.</li> <li>• DeletedPendingReviewItem—A moderator deleted a post or comment with pending status.</li> <li>• ModerationRuleFlag—A moderation rule flagged member-generated content.</li> <li>• ModerationRuleBlock—A moderation rule blocked member-generated content.</li> <li>• ModerationRuleReplace—A moderation rule replaced member-generated content.</li> <li>• ModerationRuleReview—A moderation rule sent member-generated content to be reviewed and approved by a moderator.</li> <li>• ModerationRuleFreeze—A moderation rule froze a member because they created content too frequently within a specific time frame.</li> <li>• ModerationRuleNotify—A moderation rule notified moderators because a member created content too frequently within a specific time frame.</li> </ul>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Notes entered by the user.</p>

Field Name	Details
	If the entity being tracked is a file, records the version number of the file when it was flagged.
EntityCreatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the user that created the entity being tracked.</p>
EntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the entity that is being tracked. The following entities are tracked: ChatterMessage, ContentDocument, ContentVersion, FeedComment, and FeedItem.</p>
EntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The key prefix of the entity being tracked.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the item being tracked.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the network (community) where the moderation action was performed.</p>
ParentEntityId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the parent of the entity on which an action was performed. The following entities are tracked: CollaborationGroup, DirectMessage, and User.</p>
ParentEntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The key prefix of the parent of the entity being audited.</p>

## Usage

Use this object to view an audit trail of moderation activity for your communities. You must have the “Modify All Data” permission to access this object.

Users with “Moderate Communities Feeds”, “Moderate Communities Files” or “View All Data” can view the audit trail using reports in the Salesforce user interface.

## NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with a community. Use NetworkAffinity to assign a default community to a user profile. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To work with the NetworkAffinity object, you must have View Setup or Customize Application permission.

## Fields

Field Name	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the default community associated with a user profile.</p>
ProfileId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>CreateFilter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the user profile the default community is assigned to.</p>

## Usage

Use the NetworkAffinity object to assign a default community to a user profile. The default community enables you to stamp network-agnostic email notifications to all users with that profile with the selected community's branding. The default community also becomes the target destination for email notification links. Network-agnostic email notifications include notifications about records, like cases, accounts, and opportunities.

The `NetworkId` field is not updatable through the API in Workbench, Apex, or SOAP. If you want to change the value for `NetworkId`, you must delete the record and create one with the right value.

## NetworkDiscoverableLogin

Represents the Login Discoverable login page that external users use to log in to a community. External users can be users with an external identity or any Communities license. This object is available in API version 44.0 and later

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
ApexHandlerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the Apex handler created by the Login Discovery page type.</p>
ExecuteApexHandlerAsId	<p><b>Type</b></p> <p>reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who is executing the handler.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update Unique</p> <p><b>Description</b> The ID of <code>NetworkId</code> is unique within your org.</p>
UsernameLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Log in prompt on login page when the login page type is Login Discovery.</p>

## Usage

Use this object to access the Login Discovery Page, which is a login page type that prompts users to identity themselves with an email address, phone number, or custom identifier. DiscoverableLogin performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

-  **Note:** The `NetworkDiscoverableLogin` object is created when **Login Discovery Page** is selected as the login page type on the Login & Registration (L&R) page. If you later switch to another login page type, such as a Visualforce Page or Experience Builder Page, the object isn't deleted. This means you can't delete the Apex class associated with the `NetworkDiscoverableLogin` object. To delete the Apex class, return to the L&R page and change the login page type back to **Login Discovery page**. Select another Apex class, and then you can delete the first one.

## NetworkMember

Represents a member of a community. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

This object is available only if Salesforce Communities are enabled in your org.

## Fields

Field Name	Details
DefaultGroupNotificationFrequency	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The default frequency for sending the member's group email notifications when the member joins groups in the community. The valid values are:</p> <ul style="list-style-type: none"> <li>• P—Email on every post</li> <li>• D—Daily digests</li> <li>• W—Weekly digests</li> <li>• N—Never</li> </ul> <p>The default value is W. In communities, the <code>Email on every post</code> option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to <code>Daily digests</code>. However, this field is not currently enabled. These values are reserved for future use.</p>
DigestFrequency	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The frequency for sending the member's personal email digest for the community. The valid values are:</p> <ul style="list-style-type: none"> <li>• D—Daily</li> <li>• W—Weekly</li> <li>• N—Never</li> </ul> <p>The default value is D. However, daily and weekly personal digests aren't currently available in communities. These values are reserved for future use.</p>
LastChatterActivityDate	<p><b>Type</b> date</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The last time the member posted or commented in the community.</p>
MemberId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of a person who is a member of a community.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the community that the member is part of.</p>
PreferencesDisableAllFeedsEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member can automatically receive email for updates in the community, based on the types of feed emails and digests the member has enabled.</p>
PreferencesDisableBestAnswerEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email when someone selects their answer to a post as best. Available in API 46.0 and later.</p>
PreferencesDisableBookmarkEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has bookmarked it.</p>
PreferencesDisableChangeCommentEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a change the member has made, such as an update to their profile.</p>
PreferencesDisableDirectMessageEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone sends them a direct message in the community.</p>
PreferencesDisableEndorsementEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone endorses them for a topic.</p>
PreferencesDisableFollowersEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone in the community starts following the member.</p>
DisableItemFlaggedEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p>

## Field Name

## Details

Field Name	Details
	<p><b>Description</b></p> <p>When <code>false</code>, the user automatically receives email every time a community member flags a post or comment. This setting only applies for community moderators (with the "Moderate Communities Feeds" permission) and group owners or managers.</p> <p>This field is available in API version 29.0 and later.</p>
PreferencesDisableLaterCommentEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has commented on the feed item.</p>
PreferencesDisableLikeEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has liked the feed item.</p>
PreferencesDisableMarketingCloudEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives marketing emails sent by Journey Builder. Available in API version 41.0 and later.</p>
PreferencesDisableMentionsPostEmail	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter, Update</p> <p><b>Description</b></p> <p>When <code>false</code>, the member automatically receives email every time the member is mentioned in posts.</p>

Field Name	Details
PreferencesDisableMessageEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time the member is sent a Chatter message.</p>
PreferencesDisableProfilePostEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time someone posts to the member's profile.</p>
PreferencesDisableSharePostEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time the member's post is shared.</p>
PreferencesDisCommentAfterLikeEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time someone comments on a post the member has liked.</p>
PreferencesDisMentionsCommentEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time the member is mentioned in comments.</p>
PreferencesDisProfPostCommentEmail	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Filter, Update</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time someone comments on posts on the member's profile.</p>
ReputationPoints	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort, Update</p> <p><b>Description</b> The number of reputation points the user has accumulated by performing actions in the community.</p>

## Usage

Use this object to query members of a certain community and to update their email notification settings. If you have "Modify All Data," "View All Data," or "Create and Set Up Communities," you can view all members of any community, regardless of your own membership. If you have "Modify All Data" or "Create and Set Up Communities," you can also update any member's email settings. Users without these permissions can update their own email settings and can see members of the communities that they're also members of.

**Tip:** You can directly update reputation points for a community member via the Salesforce API. You can also use Apex triggers to send custom notifications based on changes to reputation points.

## NetworkMemberGroup

Represents a group of members in a community. Members can be either users in your internal organization or external users assigned portal profiles. An administrator adds members to a community by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the community. This object is available in API version 26.0 and later.

**Note:** If a Chatter customer (from a customer group) is assigned a permission set that is also associated with a community, the Chatter customer won't be added to the community.

Prior to API version 27.0, this object was called NetworkProfile.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

**Note:** The `upsert()` call is not supported for this object.

## Special Access Rules

This object is available only if Salesforce Communities are enabled in your org.

## Fields

Field Name	Details
AssignmentStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of a profile or permission set within a community. Values are:</p> <ul style="list-style-type: none"> <li>• <b>Added</b>—Users with this profile or permission set are members of the community.</li> <li>• <b>Waiting for Add</b>—The profile or permission set was added to the community, but the async process hasn't completed yet. After the process is complete, the status is updated to <b>Added</b>.</li> <li>• <b>Waiting for Remove</b>—Use this status to remove all the community members belonging to a profile or permission set and remove a profile or permission set from a community.</li> </ul>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the community that this group of members is associated with.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the <a href="#">profile</a> or <a href="#">permission set</a> associated with the community.</p>

## Usage

Use this object to view the profiles or permission sets associated with a particular community. Profiles and permission sets are added and removed asynchronously, so you can also check the status of a profile or permission set that was updated in a community.

If you have "Modify All Data," "View All Data," or "Create and Set Up Communities," you can view all profiles or permission sets for any community in the organization, regardless of your membership. If you have "Modify All Data" or "Create and Set Up Communities," you can also add profiles or permission sets. Users without these permissions can only find profiles and permission sets for communities that they're members of.

## Sample Code

```
// Create a new NetworkMemberGroup with a profile as the ParentId
NetworkMemberGroup nmgInsert = new NetworkMemberGroup();
nmg.setNetworkId("0DBD0000000029o");
nmg.setParentId("00eD0000000z1Ww");
SaveResult[] results = connection.create(new SObject[] { nmgInsert });

// Update an existing NetworkMemberGroup to be removed from the Network
NetworkMemberGroup nmgUpdate = new NetworkMemberGroup();
nmg.setId("0DLD000000003enOAA");
nmg.setAssignmentStatus("WaitingForRemove");
SaveResult[] results = connection.update(new SObject[] { nmgUpdate });
```

## NetworkModeration

---

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

This object is available only if Salesforce Communities are enabled in your org.

### Fields

Field Name	Details
EntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the post, comment, or file that was flagged.</p>
ModerationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Determines the type of flag applied to an item. Values are:</p> <ul style="list-style-type: none"> <li>FlagAsInappropriate</li> <li>FlagAsSpam</li> </ul>

Field Name	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the community in which the item was flagged.</p>
Visibility	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Nillable, Sort</p> <p><b>Description</b> Determines visibility of a flagged item. Values are:</p> <ul style="list-style-type: none"> <li>• SelfAndModerators—The user who flagged the item and any moderators can see the flagged item. This is the default value.</li> <li>• ModeratorsOnly—Only moderators can see the flagged item. If ModeratorsOnly is selected, only moderators can set flags using the API.</li> </ul>

## Usage

Use this object to view the items flagged for moderation within a community. Additionally, users with “Moderate Feeds” and “Modify All Data” can remove flags.

Flags on items are created either when a member manually flags an item in a community (if flagging is enabled for that community), or when a trigger automatically flags an item because the item met the trigger criteria.

## NetworkPageOverride

Represents information about custom pages used to override the default pages in communities. You can create Experience Builder (Site.com Studio) or Visualforce pages and override the default pages in a community. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Only users with the “Create and Setup Networks” permission can update this object.
- You can’t override the Change Password Page with a page created using Experience Builder (Site.com Studio). You can only override it with a Visualforce page.

## Fields

Field Name	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the community where a custom page is used to override a default page.</p>
OverrideSetting	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of the page used to override a default page in the community. <code>OverrideSetting</code> can take the following values:</p> <ul style="list-style-type: none"> <li>• <code>Standard</code>—The standard page that comes by default with the community.</li> <li>• <code>Configurable</code>—The page created when the Configurable Self-Reg registration page type or the Login Discovery login page type is selected.</li> <li>• <code>Designer</code>—A custom page created using Experience Builder (Site.com Studio).</li> <li>• <code>Visualforce</code>—A custom page created using Visualforce.</li> </ul>
OverrideType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The name of the default page in the community that you want to override with a custom page. <code>OverrideType</code> can take the following values:</p> <ul style="list-style-type: none"> <li>• <code>LoginRequired</code></li> <li>• <code>ChangePassword</code></li> <li>• <code>ForgotPassword</code></li> <li>• <code>SelfReg</code></li> <li>• <code>Home</code></li> </ul>

## NetworkSelfRegistration

---

Represents the account that self-registering community members are associated with by default. Self-registering users in a community are required to be associated with an account, which the administrator must specify while setting up self-registration for the community. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
<code>AccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the account that self-registering users in the community are associated with.</p>
<code>ApexHandlerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the Apex handler created by Configurable Self-Reg registration page type.</p>
<code>ExecuteApexHandlerAsId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the user who is executing the configurable self-registration handler.</p>
<code>NetworkId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of <code>NetworkId</code> is unique within your org.</p> <p> <b>Note:</b> You can use only one account per community to assign self-registering users.</p>
<code>OptionsIncludePassword</code>	<p><b>Type</b></p> <p>Boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Option on Configurable Self-Reg registration page. If true, the Include Password field is selected.</p>
<code>OptionsShowEmail</code>	<p><b>Type</b></p> <p>Boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Option on Configurable Self-Reg registration page. If true, the Email field appears on the self-registration form.</p>
<code>OptionsShowFirstName</code>	<p><b>Type</b></p> <p>Boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Option on the Configurable Self-Reg registration page. If true, the First Name field appears on the self-registration form.</p>
<code>OptionsShowLastName</code>	<p><b>Type</b></p> <p>Boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Option on the Configurable Self-Reg registration page. If true, the Last Name field appears on the self-registration form.</p>
<code>OptionsShowMobilePhone</code>	<p><b>Type</b></p> <p>Boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Option on the Configurable Self-Reg registration page. If true, the Mobile field appears on the self-registration form.</p>
OptionsShowNickname	<p><b>Type</b> Boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Option on the Configurable Self-Reg registration page. If true, the Nickname field appears on the self-registration form.</p>
OptionsShowUsername	<p><b>Type</b> Boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Option on the Configurable Self-Reg registration page. If true, the Username field appears on the self-registration form.</p>
VerificationMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of verification method that a user must supply when registering, which can be:</p> <ul style="list-style-type: none"> <li>• SyncEmail—User must supply an email address to verify identity.</li> <li>• SMS—User must supply a phone number to verify identity.</li> </ul>

## NetworkUserHistoryRecent

---

Represents a community user's history of accessed records. This object is available in API version 42.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`

## Special Access Rules

Only users with the “Modify All Data” permission can view and delete these data.

### Fields

Field	Details
AccessTimestamp	<p><b>Type</b> datetime</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> The time at which the record was accessed.</p>
ActionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the action type taken by the user. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Write</li> </ul>
DomainName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The domain used to access the record.</p>
FeedCommentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Feed comment accessed by the user.</p>
FeedItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b> Feed item accessed by the user.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Network ID used to access the record or comment.</p>
NetworkUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> User's network user ID to access the record or comment.</p>
RecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The record that was accessed.</p>
RecordKeyPrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Record's ID key prefix.</p>
Url	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The URL from which the user accessed the record.</p>
UserType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The type of user who accessed this record. The possible values include:</p> <ul style="list-style-type: none"> <li>• Standard</li> <li>• Partner</li> <li>• Customer Portal Manager</li> <li>• Customer Portal User</li> <li>• Guest</li> <li>• High Volume Portal</li> <li>• CSN Only</li> <li>• Self Service</li> </ul>

## Usage

Use the NetworkUserHistoryRecent object to delete comments, posts, or record access by communities users who would like all such activity to be removed.

## Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Body	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>Body of the note. Limited to 32 KB.</p>
IsDeleted	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
<code>IsPrivate</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a user who does not have the “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update the note. Label is <b>Private</b>.</p>
<code>OwnerId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the user who owns the note.</p>
<code>ParentId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Required. ID of the object associated with the note.</p>
<code>Title</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Title of the note.</p>

## Usage

Use this object to manage notes for an object.

SEE ALSO:

[Object Basics](#)

# NoteAndAttachment

---

This read-only object contains all notes and attachments associated with an object.

## Supported Calls

`describeSObjects()`

## Fields

Field	Details
<code>IsDeleted</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
<code>IsNote</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the object contains a note (<code>true</code>) or an attachment (<code>false</code>).</p>
<code>IsPrivate</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a regular user who does not have “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update that note. Label is <b>Private</b>.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the user who owns the note and attachment.</p>

Field	Details
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the parent object.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Group, Sort</p> <p><b>Description</b> Title of the note.</p>

## Usage

Use this object to list all notes and attachments for an object.

To retrieve notes and attachments, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

SEE ALSO:

[Note](#)

[Attachment](#)

## NoteTag

Associates a word or short phrase with a Note.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p>

Field Name	Details
	<p><b>Description</b> ID of the tagged item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist</p> <p><b>Description</b> Defines the visibility of a tag. Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

NoteTag stores the relationship between its parent TagDefinition and the Note being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

## OauthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

An OAuth custom scope tells an external entity about a connected app's permissions to access protected data. The OAuth custom scope that you create in your Salesforce org corresponds to the same custom scope defined in your external entity, and assigned to the resource.

For example, you define an Order Status custom scope in your external entity that allows access to customer order status data in your order system's API. In Salesforce, you create an OAuth custom scope that you also name Order Status. You assign this custom scope to the connected app requesting access to the order status API. When the external entity receives the connected app's request to access a customer's order status, it validates the connected app's access token and Order Status scope. With a successful validation, the app can access the customer order status information in the order system's API.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You must have the "Manage Connected Apps" permission to access this object.

## Fields

Field Name	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The description of the permission provided to the connected app by the scope. The custom scope's description must be unique, can only include alphanumeric characters, and can be up to 60 characters long.</p> <p>You can enter a custom label in place of a description. An advantage of using a custom label is that you can maintain reusable text in a single location and translate the text into multiple languages. See <a href="#">Custom Labels</a>.</p> <p> <b>Note:</b> The description formatting requirements that apply to custom scopes also apply to custom labels.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Use when referring to the OAuth custom scope from a program. This label must be unique, and can include only alphanumeric characters and underscores.</p>
IsPublic	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the object is included in the connected app's OpenID Connect discovery endpoint. For more information, see <a href="#">OpenID Connect Discovery Endpoint</a>.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the default language defined for the developing org.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label for the custom scope record. This label must be unique, and can include only alphanumeric characters and underscores.</p>

## OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field	Details
OauthCustomScopeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the connected app to which the custom scope is assigned. If the connected app is part of a package, include the package's namespace prefix with the connected app's</p>

Field	Details
	name. Use the following format: <b>&lt;namespace_prefix&gt;__&lt;connected_app&gt;</b> . Use two underscores (__) between the namespace prefix and connected app's name.

## OAuthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

A connected app integrates an application with Salesforce using APIs. Connected apps use standard SAML and OAuth protocols to authenticate, provide single sign-on, and provide tokens for use with Salesforce APIs. In addition to standard OAuth capabilities, connected apps allow Salesforce admins to set various security policies and have explicit control over who can use the corresponding apps. Each time that a user grants access to an application, the application obtains a new access token.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

Users with the Customize Application permission see all tokens for all users in the org. Otherwise, you see only your own tokens.

## Fields

Field Name	Details
AccessToken	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The refresh token for authorization.</p>
AppMenuItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique ID for the App Picker menu item that's associated with this OAuth token.</p>
AppName	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The label for the connected app that's associated with this OAuth token.</p>
DeleteToken	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A token that can be used at the revoke OAuth token endpoint to remove this token.</p>
Id	<p><b>Type</b> ID</p> <p><b>Properties</b> Defaulted on create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> Reserved for future use. Currently, the value is always <code>null</code>.</p>
LastUsedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The most recent date when the OAuth token was used.</p>
RequestToken	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The authorization code that was used to request the corresponding AccessToken. With this authorization code, you can revoke the corresponding AccessToken by passing the DeleteToken.</p>
UseCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>How often the token has been used.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The owner of the token.</p>

## Usage

To delete an AccessToken, send a request to the revoke OAuth token endpoint with the DeleteToken as the parameter. For example, the URL `https://login.salesforce.com/services/oauth2/revoke?token=(the Delete Token)` causes the deletion of the token.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a SELECT clause for OAuthToken. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

## ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to an object, associate an ObjectPermissions record with a PermissionSet that's assigned to a user. ObjectPermissions records are only supported in PermissionSet, not in Profile.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

## Fields

Field Name	Details
ParentId	<p><b>Type</b></p> <p>reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The Id of this object's parent <a href="#">PermissionSet</a>.</p>
PermissionsCreate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can create records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
PermissionsDelete	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can delete records for this object. Requires <code>PermissionsRead</code> and <code>PermissionsEdit</code> for the same object to be <code>true</code>.</p>
PermissionsEdit	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can edit records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
PermissionsModifyAllRecords	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can edit all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code>, <code>PermissionsDelete</code>, <code>PermissionsEdit</code>, and <code>PermissionsViewAllRecords</code> for the same object to be <code>true</code>.</p>
PermissionsRead	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent PermissionSet can view records for this object.</p>
PermissionsViewAllRecords	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to the parent PermissionSet can view all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.</p>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The object's API name. For example, <code>Merchandise__c</code>.</p>

## Permission Dependencies

Some user permissions have dependencies on object permissions. For example, if a permission set has the “Transfer Leads” permission, it also has “Read” and “Create” on the leads object.

You can query from ObjectPermissions up to the parent PermissionSet object. For example:

```
SELECT Parent.Name, Parent.PermissionsTransferAnyLead, PermissionsRead, PermissionsCreate
FROM ObjectPermissions
WHERE SubjectType = 'Lead'
```

## Determining Object Access with “Modify All Data”

When using SOQL to query object permissions, be aware that some object permissions are enabled because a user permission requires them.

The exception to this rule is when “Modify All Data” is enabled. While it enables all object permissions, it doesn't physically store any object permission records in the database. As a result, unlike object permissions that are required by a user permission—such as “View All Data” or “Import Leads”—the query still returns permission sets with “Modify All Data,” but the object permission record will contain an invalid ID that begins with “000”. This ID indicates that the object has full access due to “Modify All Data” and the object permission record can't be updated or deleted. To remove full access from these objects, disable “Modify All Data” and then delete the resulting object permission record. This ensures that when using SOQL to find all the objects that have full access, it returns all objects that have this access regardless of whether it's due to “Modify All Data” or because an administrator set full access.

For example, the following will return all permission sets that have “Read” on the Merchandise\_\_c object, regardless of whether it’s explicitly defined on the object or implicitly defined through “Modify All Data.”

```
SELECT Id, Parent.label, SubjectType, PermissionsRead,
       Parent.PermissionsModifyAllData, ParentId
FROM ObjectPermissions
WHERE PermissionsRead = true and SubjectType = 'Merchandise__c'
```

## Nesting Object Permissions

You can nest ObjectPermissions in a PermissionSet query. For example, the following returns any permission sets where “Transfer Leads” is true. Additionally, the result set will include the “Read” object permission on leads. This is done by nesting the SOQL with an object permission query using the relationship name for object permissions: ObjectPerms.

```
SELECT Id, Name, PermissionsTransferAnyLead,
       (SELECT Id, PermissionsRead from ObjectPerms where SubjectType='Lead')
FROM PermissionSet
WHERE PermissionsTransferAnyLead = true
```

As a result, it’s possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, ObjectPermissions). You can do this from the PermissionSet object by using the child relationship (ObjectPerms, FieldPerms, and so on) or from the child object by referencing the PermissionSet with `Parent.permission_set_attribute`.

It’s important to consider when to use a conditional WHERE statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT Id, Name, PermissionsModifyAllData,
       (SELECT Id, SubjectType, PermissionsRead from Objectperms)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

versus:

```
SELECT Id, SObjectType, PermissionsRead, Parent.Id, Parent.Name,
       Parent.PermissionsModifyAllData
FROM ObjectPermissions
WHERE SObjectType='Merchandise__c'
```

## ObjectTerritory2AssignmentRule

Represents a territory assignment rule that’s associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is null. Available only if Enterprise Territory Management has been enabled for your organization.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories, assignment rules, assigned records, and assigned users. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
<code>BooleanFilter</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Represents advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3."</p>
<code>DeveloperName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Unique Name</code>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
<code>IsActive</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the rule is active (<code>true</code>) or inactive (<code>false</code>). Via the API, active rules run automatically when object records are created and edited. The exception</p>

Field Name	Details
	is when the value of the <code>IsExcludedFromRealign</code> field on an object record is <code>true</code> , which prevents record assignment rules from evaluating that record.
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the master label in the user interface.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The user interface label for the territory type.</p>
ObjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The object that the rule is defined for. For API version 31, Account only.</p>
Territory2ModelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the territory model.</p>

## ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an `ObjectTerritory2AssignmentRule` object. `ObjectTerritory2AssignmentRuleItem` can only be created or deleted if the `BooleanFilter` field on its corresponding `ObjectTerritory2AssignmentRule` object is a `null` value. Available only if Enterprise Territory Management has been enabled for your organization.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The standard or custom object field that the rule item will operate on.</p>
Operation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The criterion to apply for the rule item. For example: <i>equals</i> or <i>starts with</i>.</p>
RuleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the associated ObjectTerritory2AssignmentRule.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The order in which this row is evaluated in relation to other ObjectTerritoryAssignmentRuleItem objects for the given ObjectTerritoryAssignmentRule.</p>
Value	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The field value or values to evaluate. For example: if the field is <code>Billing ZIP/Postal Code</code>, a value might be <code>94105..</code></p>

## ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record, such as an account. Available only if Enterprise Territory Management has been enabled for your Salesforce org.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

### Fields

Field Name	Details
<code>AssociationCause</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The means by which the record was associated with the territory: by rules or manually. User interface field label is <code>Method</code>. Manual cause can be set only by a user or via the API. Rules cause is used by the rules engine when the object is assigned.</p>
<code>ObjectId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the object. For API version 30.0 and later, Account only.</p>
SubjectType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The type of the record. For API version 30.0 and later, Account only.</p>
Territory2Id	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the territory that the record is assigned to.</p>

## OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

## Supported Calls

`describeSObjects()`

## Fields

Field	Details
AccountId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Indicates the ID of the related account, which is determined as follows:</p> <ul style="list-style-type: none"> <li>• The account associated with the <code>whatId</code>, if it exists; or</li> <li>• The account associated with the <code>whoId</code>, if it exists; otherwise</li> <li>• <code>null</code></li> </ul>

Field	Details
	For information on IDs, see <a href="#">ID Field Type</a> .
ActivityDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates one of the following:</p> <ul style="list-style-type: none"> <li>• The due date of a task</li> <li>• The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code></li> </ul> <p>This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.</p>
ActivityDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Aggregate, Filter, Nillable, Sort</p> <p><b>Description</b> Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is <b>Due Date Time</b>.</p> <p>The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.</p>
ActivitySubtype	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable.</p> <p>ActivitySubtype values:</p> <ul style="list-style-type: none"> <li>• Task</li> <li>• Email</li> <li>• Call</li> <li>• Event</li> <li>• List Email</li> </ul>
ActivityType	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents one of the following values: <code>Call</code>, <code>Email</code>, <code>Meeting</code>, or <code>Other</code>. <code>Label</code> is <code>Type</code>. These are default values, and can be changed.</p> <p><code>ActivityType</code> is the union of <code>TaskType</code> and <code>EventType</code>. If the same activity appears in both dynamic picklists, duplicate activities appear.</p> <p><code>TaskType</code> and <code>EventType</code> can each have a <code>Call</code> type. Internally, they are distinct from each other.</p>
<code>AlternateDetailId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an <code>EmailMessage</code> record.</p>
<code>CallDisposition</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.</p>
<code>CallDurationInSeconds</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Duration of the call in seconds.</p>
<code>CallObject</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of a call center. Limit is 255 characters.</p>

Field	Details
CallType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of call being answered: Inbound, Internal, or Outbound.</p>
ConnectionReceivedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later.</p>
ConnectionSentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always null. You can use the PartnerNetworkRecordConnection object to forward records to connections.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Contains a description of the event or task. Limit is 32 KB.</p>
DurationInMinutes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the duration of the event or task.</p>
EndDateTime	<p><b>Type</b> dateTime</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following:</p> <ul style="list-style-type: none"> <li>• If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndDateTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day.</li> <li>• If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndDateTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time.</li> </ul>
<code>IsAllDayEvent</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If the value of this field is set to <code>true</code>, then the activity is an event spanning a full day, and the <code>ActivityDate</code> defines the date of the event. If the value of this field is set to <code>false</code>, then the activity may be an event spanning less than a full day, or it may be a task. Label is <code>All-Day Event</code>.</p>
<code>IsClosed</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a task is closed; value is always <code>false</code>). This field is set indirectly by setting <code>Status</code> on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.</p>
<code>IsDeleted</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the activity has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.</p>
<code>IsHighPriority</code>	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates a high-priority task. This field is derived from the <code>Priority</code> field.</p>
<code>IsReminderSet</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>).</p>
<code>IsTask</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. Label is <code>Task</code>.</p>
<code>IsVisibleInSelfService</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. Label is <code>Visible in Self-Service</code>.</p>
<code>Location</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is <code>null</code>.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the user or group who owns the activity.</p>

Field	Details
PrimaryAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Contains the <code>AccountId</code> value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities.</p>
PrimaryWhoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Contains the <code>WhoId</code> value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities.</p>
Priority	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the priority of a task, such as high, normal, or low.</p>
ReminderDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the current status of a task, such as in progress or complete. Each predefined status field sets a value for <code>IsClosed</code>. To obtain picklist values, query <code>TaskStatus</code>.</p>

Field	Details
Subject	<p><b>Type</b> combobox</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Contains the subject of the task or event.</p>
WhatId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>.</p>
WhoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The <code>WhoId</code> represents a human such as a lead or a contact. <code>WhoId</code>s are polymorphic. Polymorphic means a <code>WhoId</code> is equivalent to a contact's ID or a lead's ID. The label is <code>Name ID</code>.</p> <p>If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the <code>WhoId</code> field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is <code>Name ID</code>.</p>

## Usage

### Query activities that are related to an object

1. Optionally, issue a describe call against the object whose activities you want to query, to get a suggestion of the correct SOQL query to use.
2. Issue a SOQL relationship query with a main clause that references the object and an inner clause that references the activity history. For example:

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities
   ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC
   LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in ascending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC`.

[Task](#)

## OperatingHours

---

Represents the hours in which a service territory, service resource, or account is available for field service work in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the operating hours. Add any details that aren't included in the name.</p>

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the operating hours record was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the operating hours record was last viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the operating hours. For example, <i>Summer Hours, Winter Hours, or Peak Season Hours</i>.</p>
TimeZone	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The time zone which the operating hours fall within.</p>

## Usage

By default, only System Administrators can view, create, and assign operating hours.

Service territory members—which are service resources who can work in the territory—automatically use their service territory’s operating hours. If a resource needs different operating hours than their territory, create separate operating hours for them from the Operating Hours tab. Then, select the desired hours in the `Operating Hours` lookup field on the service territory member detail page.

To view a service resource’s operating hours for a particular territory, navigate to their Service Territories related list and click the Member Number for the territory. This takes you to the service territory member detail page, which lists the member’s operating hours and dates during which they belong to the territory.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### OperatingHoursFeed

Feed tracking is available for the object.

## OperatingHoursHistory

---

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

## Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled in your organization, and field tracking for operating hours fields must be configured.

## Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>

Field Name	Details
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The value of the field before it was changed.</p>
TimeSlotId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the operating hours record being tracked. The history is displayed on the detail page for this record.</p>

## Opportunity

Represents an opportunity, which is a sale or pending deal.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Field Type
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the account associated with this opportunity.</p>
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Field Type
	<p><b>Description</b></p> <p>Estimated total sale amount. For opportunities with products, the amount is the sum of the related products. Any attempt to update this field, if the record has products, will be ignored. The update call will not be rejected, and other fields will be updated as specified, but the Amount will be unchanged.</p>
CampaignId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>ID of a related Campaign. This field is defined only for those organizations that have the campaign feature Campaigns enabled. The User must have read access rights to the cross-referenced Campaign object in order to create or update that campaign into this field on the opportunity.</p>
CloseDate	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Date when the opportunity is expected to close.</p>
ConnectionReceivedId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
ContactId	<p><b>Type</b></p> <p>reference</p>

Field	Field Type
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the contact associated with this opportunity, set as the primary contact. Read-only field that is derived from the opportunity contact role, which is created at the same time the opportunity is created. This field can only be populated when it's created, and can't be updated. To update the value in this field, change the <code>IsPrimary</code> flag on the OpportunityContactRole associated with this opportunity. Available in API version 46.0 and later.</p>
ContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contract that's associated with this opportunity.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.  If the organization has multicurrency and a Pricebook2 is specified on the opportunity (i.e., the <code>Pricebook2Id</code> field is not blank), then the currency value of this field must match the currency of the PricebookEntry records that are associated with any opportunity line items it has.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Text description of the opportunity. Limit: 32,000 characters.</p>
ExpectedRevenue	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Field Type
	<p><b>Description</b> Read-only field that is equal to the product of the opportunity <code>Amount</code> field and the <code>Probability</code>. You can't directly set this field, but you can indirectly set it by setting the <code>Amount</code> or <code>Probability</code> fields.</p>
<code>Fiscal</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If fiscal years are not enabled, the name of the fiscal quarter or period in which the opportunity <code>CloseDate</code> falls. Value should be in <code>YYY Q</code> format, for example, '2006 1' for first quarter of 2006.</p>
<code>FiscalQuarter</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the fiscal quarter. Valid values are 1, 2, 3, or 4.</p>
<code>FiscalYear</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the fiscal year, for example, 2006.</p>
<code>ForecastCategory</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Restricted picklist field. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value. The values of this field are fixed enumerated values. The field labels are localized to the language of the user performing the operation, if localized versions of those labels are available for that language in the user interface.</p> <p>In API version 12.0 and later, the value of this field is automatically set based on the value of the <code>ForecastCategoryName</code> and can't be updated any other way. The field properties <code>Create</code>, <code>Defaulted on create</code>, <code>Nillable</code>, and <code>Update</code> are not available in version 12.0.</p>

Field	Field Type
ForecastCategoryName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available in API version 12.0 and later.  The name of the forecast category. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value.</p>
HasOpenActivity	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Group,</p> <p><b>Description</b> Indicates whether an opportunity has an open event or task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.</p>
HasOpportunityLineItem	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only field that indicates whether the opportunity has associated line items. A value of <code>true</code> means that Opportunity line items have been created for the opportunity. An opportunity can have opportunity line items only if the opportunity has a price book. The opportunity line items must correspond to PricebookEntry objects that are listed in the opportunity Pricebook2. However, you can insert opportunity line items on an opportunity that does not have an associated Pricebook2. For the first opportunity line item that you insert on an opportunity without a Pricebook2, the API automatically sets the <code>Pricebook2Id</code> field, if the opportunity line item corresponds to a PricebookEntry in an active Pricebook2 that has a <code>CurrencyIsoCode</code> field that matches the <code>CurrencyIsoCode</code> field of the opportunity. If the Pricebook2 is not active or the <code>CurrencyIsoCode</code> fields do not match, then the API returns an error. You can't update the <code>Pricebook2Id</code> or <code>PricebookId</code> fields if opportunity line items exist on the Opportunity. You must delete the line items before attempting to update the <code>PricebookId</code> field.</p>
HasOverdueTask	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Group,</p>

Field	Field Type
	<p><b>Description</b></p> <p>Indicates whether an opportunity has an overdue task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.</p>
IqScore	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Aggregate, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The likelihood, measured on a scale of 1 to 99, that an opportunity will be won. Einstein Opportunity Scoring must be enabled. Available in API version 41.0 and later. Label is <b>Opportunity Score</b>.</p>
IsClosed	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Directly controlled by <code>StageName</code>. You can query and filter on this field, but you can't directly set it in a create, upsert, or update request. It can only be set via <code>StageName</code>. Label is <b>Closed</b>.</p>
IsDeleted	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter</p> <p><b>Description</b></p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
IsExcludedFromTerritory2Filter	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Indicates whether the opportunity is excluded (<code>True</code>) or included (<code>False</code>) each time the APEX filter is executed.</p>
IsSplit	<p><b>Type</b></p> <p>boolean</p>

Field	Field Type
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only field that indicates whether credit for the opportunity is split between opportunity team members. Label is <code>IsSplit</code>. This field is available in versions 14.0 and later for organizations that enabled Opportunity Splits during the pilot period.</p> <p> <b>Warning:</b> This field should not be used. However, it's documented for the benefit of pilot customers who find references to <code>IsSplit</code> in code.</p>
<code>IsWon</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Directly controlled by <code>StageName</code>. You can query and filter on this field, but you can't directly set the value. It can only be set via <code>StageName</code>. Label is <b>Won</b>.</p>
<code>LastActivityDate</code>	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Value is one of the following, whichever is the most recent:</p> <ul style="list-style-type: none"> <li>• Due date of the most recent event logged against the record.</li> <li>• Due date of the most recently closed task associated with the record.</li> </ul>
<code>LastReferencedDate</code>	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
<code>LastViewedDate</code>	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>

Field	Field Type
LeadSource	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Source of this opportunity, such as Advertisement or Trade Show.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. A name for this opportunity. Limit: 120 characters.</p>
NextStep	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of next task in closing opportunity. Limit: 255 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the User who has been assigned to work this opportunity. If you update this field, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. If you have set up opportunity teams in your organization, updating this field has different consequences depending on your version of the API:</p> <ul style="list-style-type: none"> <li>• For API version 12.0 and later, sharing records are kept, as they are for all objects.</li> <li>• For API version before 12.0, sharing records are deleted.</li> <li>• For API version 16.0 and later, users must have the "Transfer Record" permission in order to update (transfer) account ownership using this field.</li> </ul>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p><b>Description</b></p> <p>ID of a related Pricebook2 object. The <code>Pricebook2Id</code> field indicates which Pricebook2 applies to this opportunity. The <code>Pricebook2Id</code> field is defined only for those organizations that have products enabled as a feature. You can specify values for only one field (<code>Pricebook2Id</code> or <code>PricebookId</code>)—not both fields. For this reason, both fields are declared nillable.</p>
PricebookId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Nillable, Update</p> <p><b>Description</b></p> <p>Unavailable as of version 3.0. As of version 8.0, the Pricebook object is no longer available. Use the <code>Pricebook2Id</code> field instead, specifying the ID of the Pricebook2 record.</p>
Probability	<p><b>Type</b></p> <p>percent</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Percentage of estimated confidence in closing the opportunity. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than what is implied by the <code>StageName</code>.</p> <p> <b>Note:</b> If you're changing the <code>Probability</code> field through the API using a partner WSDL call, or an Apex <code>before</code> trigger, and the value may have several decimal places, we recommend rounding the value to a whole number. For example, the following Apex in a <code>before</code> trigger uses the <code>round</code> method to change the field value: <code>o.probability = o.probability.round();</code></p>
RecordTypeId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Update</p> <p><b>Description</b></p> <p>ID of the record type assigned to this object.</p>
StageName	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p>

Field	Field Type
	<p><b>Description</b> Required. Current stage of this record. The <code>StageName</code> field controls several other fields on an opportunity. Each of the fields can be directly set or implied by changing the <code>StageName</code> field. In addition, the <code>StageName</code> field is a picklist, so it has additional members in the returned <code>describeSObjectResult</code> to indicate how it affects the other fields. To obtain the stage name values in the picklist, query the <code>OpportunityStage</code> object. If the <code>StageName</code> is updated, then the <code>ForecastCategoryName</code>, <code>IsClosed</code>, <code>IsWon</code>, and <code>Probability</code> are automatically updated based on the stage-category mapping.</p>
<code>SyncedQuoteID</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Read only in an Apex trigger. The ID of the Quote that syncs with the opportunity. Setting this field lets you start and stop syncing between the opportunity and a quote. The ID has to be for a quote that is a child of the opportunity.</p>
<code>Territory2Id</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the territory that is assigned to the opportunity. Available only if Enterprise Territory Management has been enabled for your organization.</p>
<code>TotalOpportunityQuantity</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Number of items included in this opportunity. Used in quantity-based forecasting.</p>
<code>Type</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of opportunity. For example, Existing Business or New Business. Label is <b>Opportunity Type</b>.</p>

-  **Note:** If you are importing Opportunity data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

Use the Opportunity object to manage information about a sale or pending deal. You can also sync this object with a child Quote. To update an Opportunity, your client application needs “Edit” permission on opportunities. You can create, update, delete, and query Attachment records associated with an opportunity via the API. To split credit for an opportunity among multiple opportunity team members, use the OpportunitySplit object.

Client applications can also create or update opportunity objects by converting a Lead with `convertLead()`.

-  **Note:** On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization’s business policies.

## Sample Code—Java

This code starts the sync between an object and a child quote.

```
public void startQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setSyncedQuoteId(new ID("0Q0D000000002OZ"));
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

This code stops the sync between an object and a child quote.

```
public void stopQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setFieldsToNull(new String[] {"SyncedQuoteId"});
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### OpportunityFeed (API version 18.0)

Feed tracking is available for the object.

### OpportunityHistory

History is available for tracked fields of the object.

### OpportunityOwnerSharingRule

Sharing rules are available for the object.

### OpportunityShare

Sharing is available for the object.

## OpportunityCompetitor

---

Represents a competitor on an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
CompetitorName	<p><b>Type</b> combobox</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Name of the competitor.</p>

---

Field	Details
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the associated Opportunity.</p>
Strengths	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the competitor's strengths. Limit: 1,000 characters.</p>
Weaknesses	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the competitor's weaknesses. Limit: 1,000 characters.</p>

## Usage

Use this object to manage competitors on an Opportunity, associating multiple competitors on a opportunity and specifying the strengths and weaknesses of each competitor.

SEE ALSO:

[Opportunity](#)

## OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of an associated Contact. The API applies user access rights to the associated Opportunity for this object, but not to the associated Contact. The API may return rows from a query on this object that include this field's values for contacts to which the user does not have sufficient access rights. It may also return values for this field for contacts that have been deleted. In either case, the client must perform a query on the contact table for this field's value to determine whether the Contact is accessible to the user and has not been deleted.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. This field is available in API version 47.0.</p>
Division	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). The <code>IsDeleted</code> flag is usable only when the parent record is deleted to the recycle bin, and not when the <code>OpportunityContactRole</code> record is deleted directly. Label is <b>Deleted</b>.</p>
<code>IsPrimary</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether the associated Contact plays the primary role on the Opportunity (<code>true</code>) or not (<code>false</code>). Each Opportunity has only one primary contact. Label is <b>Primary</b>.</p>
<code>OpportunityId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Required. ID of an associated Opportunity. This field is non-nullable, and it cannot be updated. You must provide a value for this field when creating new records. You can't change it after it has been created.</p>
<code>Role</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Name of the role played by the associated Contact on the Opportunity, such as Business User or Decision Maker.</p>

## Usage

Use the Opportunity Contact Role object to manage information about contacts and roles related to opportunities. Records of this type appear in the user interface in the Opportunity Contact Role related list and on the Opportunity detail page.

Although allowed, we do not recommend that you create multiple relationships between the same Opportunity and a Contact.

[Object Basics](#)

# OpportunityContactRoleSuggestionInsight

---

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getDeleted()`, `query()`, `retrieve()`

## Special Access Rules

To add or decline opportunity contact role suggestions, users need a Sales Cloud Einstein license, edit access on opportunities, and read or edit access on contacts. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

## Fields

Field Name	Details
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the related contact record.</p>
CreatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the created opportunity contact role record.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Division	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p>

Field Name	Details
	<b>Description</b> The division of the suggested opportunity contact role.
LastOperationUserId	<b>Type</b> reference <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The ID of the user who last performed a related operation.
LastReferencedDate	<b>Type</b> dateTime <b>Properties</b> Filter, Nillable, Sort <b>Description</b> The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	<b>Type</b> dateTime <b>Properties</b> Filter, Nillable, Sort <b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced ( <code>LastReferencedDate</code> ) and not viewed.
OpportunityId	<b>Type</b> reference <b>Properties</b> Filter, Group, Sort <b>Description</b> The ID of the related opportunity.
RationaleLabel	<b>Type</b> string <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The reason why this is a suggested opportunity contact role.

Field Name	Details
Role	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The role of the suggested opportunity contact role.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the suggested contact. Possible values include:</p> <ul style="list-style-type: none"> <li>• New</li> <li>• Pending</li> <li>• Added</li> <li>• Declined</li> </ul>

## Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

## OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>

Field	Details
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the Opportunity. Label is <b>Opportunity ID</b>.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The latest value of the field before it was changed.</p>

## Usage

Use this object to identify changes to any fields on an Opportunity. The OpportunityHistory object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity.

This object respects field level security on the parent object.

SEE ALSO:

[Opportunity](#)

## OpportunityHistory

---

Represents the stage history of an Opportunity.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Estimated total sale amount.</p>
CloseDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Date when the opportunity is expected to close.</p>
ExpectedRevenue	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Calculated revenue based on the <code>Amount</code> and <code>Probability</code> fields.</p>
ForecastCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b> Category that determines the column in which an opportunity is totaled in a forecast. Label is <b>To ForecastCategory</b>.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the associated Opportunity.</p>
Probability	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Percentage of estimated confidence in closing the opportunity.</p>
StageName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Name of the current stage of the opportunity (for example, Prospect or Proposal).</p>

## Usage

This object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity. The `OpportunityFieldHistory` object represents the history of a change to any of the fields of an Opportunity. To obtain information about how a particular opportunity is progressing, query the `OpportunityHistory` records associated with a given Opportunity. Please note that if an opportunity's `Amount`, `Probability`, `Stage`, or `Close Date` fields have not changed, nothing will be returned in the `OpportunityHistory` objects. In this case, query the `OpportunityFieldHistory` records associated with a given Opportunity to get more information about changes to the opportunity.

This object is read-only. The system generates a new record whenever a user or client application changes the value of any of the above fields; the then-current values of all of these major fields are saved in the newly-generated object.

This object respects field-level security on the parent object.

 **Note:** The record is automatically deleted if its parent Opportunity is deleted.

[Opportunity](#)

## OpportunityInsight

---

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

### Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

### Special Access Rules

To see an insight related to a specific opportunity, users need a Sales Cloud Einstein license and access to the opportunity record. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

### Fields

Field Name	Details
ActualHeardWithinDays	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of days it has been since a prospect has responded for insights of type <code>Prospect has not responded</code> and <code>No communication</code>.</p>
CloseDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The close date of the related opportunity for insights of type <code>Opportunity is overdue</code> and <code>Opportunity is unlikely to close in time</code>.</p>

Field Name	Details
CompetitorName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> This field has been deprecated as of API version 45.0.</p>
ContactName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> This field is not in use as of API version 46.0.</p>
ContactTitle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> This field is not in use as of API version 46.0.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Division	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The division of the related record.</p>
ExpectedHeardWithinDays	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The expected number of days it takes to hear back from a prospect for insights of type Prospect has not responded and No communication.</p>
LastHeard	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the related prospect was last heard from for insights of type Prospect has not responded.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the related opportunity record.</p>
Rationale	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable</p>

Field Name	Details
Reason	<p><b>Description</b> The explanation for an insight, providing more background information and details that are specific to the org.</p> <p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The reason why a specific insight type is appearing. Relevant to the following insights:</p> <ul style="list-style-type: none"> <li>• Opportunity is unlikely to close in time</li> <li>• Opportunity slowing</li> <li>• Opportunity boosting</li> <li>• Time-consuming opportunity</li> </ul>
TaskDue	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date that a task associated with the related opportunity record is due.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable</p> <p><b>Description</b> The title of the insight.</p>
TrendType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p>The trend type of the insight. Possible values include:</p> <ul style="list-style-type: none"> <li>• Negative</li> <li>• Positive</li> <li>• Informational</li> </ul>
Type	<p><b>Type</b> picklist</p>

**Field Name****Details****Properties**

Filter, Group, Restricted picklist, Sort

**Description**

The type of insight. Possible values include:

- Opportunity is unlikely to close in time
- Prospect has not responded
- Opportunity slowing
- Opportunity boosting
- Time-consuming opportunity
- No communication
- Re-engaged opportunity
- Opportunity has an overdue task
- Opportunity is overdue
- Opportunity has no open activity
- Unusual opportunity amount

## Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

## OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The user must have the "Edit" permission on Opportunity records to create or update opportunity line items on an opportunity.

## Fields

**Field****Details**

CanUseQuantitySchedule

**Type**

boolean

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the opportunity product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.</p>
CanUseRevenueSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the opportunity product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.</p>
ConnectionReceivedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Restricted picklist</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p> <p>If the organization has multicurrency enabled, and a Pricebook2 is specified on the parent opportunity (that is, the <code>Pricebook2Id</code> field is not blank on the opportunity referenced by this object's <code>OpportunityId</code>), then the value of this field must match the currency</p>

Field	Details
	of the <code>CurrencyIsoCode</code> field on the <code>PricebookEntry</code> records that are associated with this object.
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Text description of the opportunity line item. Limit: 80 characters.</p>
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Discount for the product as a percentage. When updating these records:</p> <ul style="list-style-type: none"> <li>• If you specify <code>Discount</code> without specifying <code>TotalPrice</code>, the <code>TotalPrice</code> is adjusted to accommodate the new <code>Discount</code> value, and the <code>UnitPrice</code> is held constant.</li> <li>• If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system knows which one to automatically adjust.</li> </ul>
HasQuantitySchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group</p> <p><b>Description</b> Read-only. Indicates whether a quantity schedule has been created for this object (<code>true</code>) or not (<code>false</code>).</p>
HasRevenueSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a revenue schedule has been created for this object (<code>true</code>) or not (<code>false</code>).  If this object has a revenue schedule, the <code>Quantity</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. Update requests aren't rejected but the updated values are ignored.</p>

Field	Details
HasSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If either <code>HasQuantitySchedule</code> or <code>HasRevenueSchedule</code> is <code>true</code>, this field is also <code>true</code>.</p>
ListPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Corresponds to the <code>UnitPrice</code> on the <code>PricebookEntry</code> that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The opportunity line item name (known as "Opportunity Product" in the user interface). This read-only field is available in API version 30.0 and later.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the associated Opportunity.</p>
PricebookEntryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required. ID of the associated <code>PricebookEntry</code>. Exists only for those organizations that have Products enabled as a feature. You can specify values for either this field or <code>ProductId</code>, but not both. For this reason, both fields are declared nillable.</p>

Field	Details
ProductId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable</p> <p><b>Description</b> ID of the related Product record. This field is unavailable as of version 3.0 and is only provided for backward compatibility. The Product object is unavailable beginning with version 8.0. Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related Product2 record. This is a read-only field available in API version 30.0 and later.  Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record.</p>
ProductCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> This read-only field is available in API version 30.0 and later. It references the value in the ProductCode field of the related Product2 record.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Read-only if this record has a quantity schedule, a revenue schedule, or both a quantity and a revenue schedule.  When updating these records:</p> <ul style="list-style-type: none"> <li>• If you specify <code>Quantity</code> without specifying the <code>UnitPrice</code>, the <code>UnitPrice</code> value will be adjusted to accommodate the new <code>Quantity</code> value, and the <code>TotalPrice</code> will be held constant.</li> <li>• If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system can determine which one to automatically adjust.</li> </ul>

Field	Details
RecalculateTotalPrice	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price. <code>Product2</code> flag must be set to true.</p>
ServiceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date when the product revenue will be recognized and the product quantity will be shipped.</p> <ul style="list-style-type: none"> <li>• Opportunity Close Date—<code>ServiceDate</code> is ignored.</li> <li>• Product Date—<code>ServiceDate</code> is used if not null.</li> <li>• Schedule Date—<code>ServiceDate</code> is used if not null and there are no revenue schedules present for this line item, that is, there are no OpportunityLineItemSchedule records with a field <code>Type</code> value of Revenue that are children of this record.</li> </ul>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number indicating the sort order selected by the user. Client applications can use this to match the sort order in Salesforce.</p>
Subtotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>This field is available only for backward compatibility. It represents the total price of the OpportunityLineItem.</p> <p>If you do not specify <code>UnitPrice</code>, this field is required. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>UnitPrice</code> is required. When updating these records, you can change either this value or the <code>UnitPrice</code>, but not both at the same time.</p> <p>This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update request. To insert the <code>TotalPrice</code> via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the opportunity line item has a revenue schedule. If the opportunity line item does not have a schedule or only has quantity schedule, this field can be updated.</p>
UnitPrice	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The unit price for the opportunity line item. In the Salesforce user interface, this field's value is calculated by dividing the total price of the opportunity line item by the quantity listed for that line item. Label is <b>Sales Price</b>.</p> <p>This field or <code>TotalPrice</code> is required. You can't specify both.</p> <p>If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>TotalPrice</code> is required.</p>

## Usage

An Opportunity can have associated OpportunityLineItem records only if the Opportunity has a Pricebook2. An OpportunityLineItem must correspond to a Product2 that is listed in the opportunity's Pricebook2. For information about inserting OpportunityLineItem for an opportunity that does not have an associated Pricebook2 or any existing line items, see [Effects on Opportunities](#).

This object is defined only for orgs with products enabled as a feature. If the products feature isn't enabled, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or query the OpportunityLineItem object.

For a visual diagram of the relationships between OpportunityLineItem and other objects, see [Product and Schedule Objects](#).

### Note:

- If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, and is always set to the value of the `CurrencyIsoCode` of the parent Opportunity.
- If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

## Effects on Opportunities

Opportunities with associated OpportunityLineItem records are affected in the following ways:

- Creating an OpportunityLineItem increments the Opportunity Amount value by the TotalPrice of the OpportunityLineItem. Additionally, inserting an OpportunityLineItem increments the ExpectedRevenue on the opportunity by the TotalPrice times the opportunity Probability.
- The Opportunity Amount becomes a read-only field when the opportunity has line items. The API ignores any attempt to update this field on an opportunity with line items. Update requests are not rejected, but the updated value is ignored.
- You can't update the PricebookId field or the CurrencyIsoCode field on the opportunity if line items exist. The API rejects any attempt to update these fields on an opportunity with line items.
- When you create or update an OpportunityLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the opportunity. If the opportunity does not have an associated Pricebook2, the API automatically sets the price book on the opportunity if the line item corresponds to a PricebookEntry in an active Pricebook2, and if the PricebookEntry has a CurrencyIsoCode field that matches the CurrencyIsoCode field of the opportunity. If the Pricebook2 is not active or the CurrencyIsoCode fields do not match, an error is returned.
- The OpportunityHasOpportunityLineItem field is set to true when an OpportunityLineItem is inserted for that Opportunity.

SEE ALSO:

[OpportunityLineItemSchedule](#)

## OpportunityLineItemSchedule

---

Represents information about the quantity, revenue distribution, and delivery dates for a particular OpportunityLineItem.

In API version 38.0 and later, when an OpportunityLineItem record is created for a product with a previously established schedule, an OpportunityLineItemSchedule record is also created.

In API version 46.0 and later, this object supports custom fields, validation rules, and Apex triggers. Deleting a schedule now also invokes delete triggers. If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. This field is available in version 10.0 and later.</p>

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Text description of the opportunity line item schedule. Limit: 80 characters. Label is <b>Comments</b>.</p>
OpportunityLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Required. ID of the associated OpportunityLineItem.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Required. The total number of units to be scheduled in <a href="#">a quantity schedule</a>.</p>
Revenue	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The revenue that should be recognized, or the quantity that should be shipped, or both - depending upon the value of <code>Type</code>.</p>
ScheduleDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The date the associated OpportunityLineItem is to be scheduled for an event: delivery, shipping, or any other date you wish to track.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The type of the schedule. Required when inserting an OpportunityLineItemSchedule. Valid values include <code>Quantity</code>, <code>Revenue</code>, or <code>Both</code>.</p>

## Allowed Type Field Values

The allowed `Type` values for an OpportunityLineItemSchedule depend on the product-level schedule preferences and whether the line item has any existing schedules. The following criteria must be met:

- The Product2 on which the OpportunityLineItem is based must have the appropriate `CanUseRevenueSchedule` or `CanUseQuantitySchedule` fields (or both) set to `true`.
- When you create a schedule for a line item that does not have any existing schedules, you can specify any valid value.
- If you create a schedule for a line item that already has existing schedules, the new schedule must be consistent with the existing schedules. The following matrix outlines the allowable values:

Value of HasRevenueSchedule on line item	Value of HasQuantitySchedule on line item	Allowable Type Values
false	false	Revenue, Quantity, both
false	true	Quantity
true	false	Revenue
true	true	both

## Allowed Quantity and Revenue Field Values

The allowable `Quantity` and `Revenue` field values depend on the value of the `Type` field:

Type Value	Allowable Quantity Value	Allowable Revenue Value
Revenue	Null	Non-null
Quantity	Non-null	Null
both	Non-null	Non-null

The `Quantity` and `Revenue` fields have the following restrictions when this object is updated:

- For a schedule of `Type Quantity`, you can't update a null `Revenue` value to non-null. Likewise for a schedule of `Type Revenue`, you can't update a null `Quantity` value to non-null.
- You can't null out the `Quantity` field for a schedule of `Type Quantity`. Likewise you can't null out the `Revenue` field for a schedule of `Type Revenue`.
- You can't null out either the `Revenue` or `Quantity` fields for a schedule of type `Both`.

## Usage

OpportunityLineItemSchedule supports two types of schedules:

- Quantity schedules
- Revenue schedules

The user must have edit access rights on the Opportunity in order to create or update line item schedules on that opportunity.

## Products and Schedules Must Be Enabled

The OpportunityLineItemSchedule object is defined only for those organizations that have the products and schedules features enabled. If the organization does not have the products and schedules features, the OpportunityLineItemSchedule object is not returned in a describe, and you can't describe or query OpportunityLineItemSchedule records.

## Effects on Opportunities and Opportunity Line Items

OpportunityLineItemSchedule records affect opportunities and opportunity line items in the following ways:

- Inserting an OpportunityLineItemSchedule of Type "Revenue" or "Quantity" increments the TotalPrice field on the OpportunityLineItem by the OpportunityLineItemSchedule Revenue amount. Inserting an OpportunityLineItemSchedule of Type Quantity or Both increments the Quantity field on the OpportunityLineItem by the OpportunityLineItemSchedule Quantity amount.
- Creating an OpportunityLineItemSchedule record affects the original opportunity:
  1. The Opportunity Amount is incremented the by OpportunityLineItemSchedule revenue amount
  2. The Opportunity ExpectedRevenue is incremented by the line item schedule amount multiplied by the Opportunity Probability
- Deleting an OpportunityLineItemSchedule has a similar effect on the related OpportunityLineItem and Opportunity. Deleting an OpportunityLineItemSchedule decrements the OpportunityLineItem TotalPrice by the deleted OpportunityLineItemSchedule Quantity or Revenue amount. The Opportunity Amount is also decremented by the OpportunityLineItemSchedule Quantity or Revenue amount, and the Opportunity ExpectedRevenue is reduced by OpportunityLineItemSchedule Quantity or Revenue amount multiplied by the Opportunity Probability.

## Deleting an Opportunity Line Item Schedule

Deleting the last remaining schedule will set the corresponding HasQuantitySchedule or HasRevenueSchedule flags (or both) to false on the parent line item.

## OpportunityOwnerSharingRule

---

Represents a rule for sharing an opportunity with users other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The ID representing the source group. Opportunities owned by users in the source group trigger the rule to give access.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
OpportunityAccessLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID representing the target user or group. The target user or group is being given access.</p>

## Usage

Use this object to manage the sharing rules for opportunities. General sharing and Territory-related sharing use this object.

-  **Note:** The original territory management feature is scheduled for retirement for all customers as of Summer '21. After the feature is retired, users can't access the original territory management feature and its underlying data. We encourage you to migrate to Enterprise Territory Management. We also strongly recommend that you keep a comprehensive backup of your territory data while you're still using the original territory management feature. For more information, see [The Original Territory Management Module](#)

[Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

## OpportunityPartner

---

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

Customer Portal users can't access this object.

### Fields

Field	Details
AccountToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the partner Account in the partner relationship.</p>
IsPrimary	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the account is the opportunity's primary partner (<code>true</code>) or not (<code>false</code>). Label is <b>Primary</b>.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the Opportunity that is in the partner relationship.</p>
ReversePartnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the account in a partner relationship.</p>
Role	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The UserRole that the Account has on the Opportunity. For example, Reseller or Manufacturer.</p>

## Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates an OpportunityPartner record with the corresponding values:

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

SEE ALSO:

[Partner](#)

[AccountPartner](#)

## OpportunityShare

Represents a sharing entry on an Opportunity.

### Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with access to the Opportunity object can access this object.

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
OpportunityAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the user or group has to the opportunity. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All—This value is not valid when creating, updating, or deleting records.</li> </ul> <p>This field must be set to an access level that's higher than the org's default access level for opportunities.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the opportunity associated with this sharing entry. This field can't be updated.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Reason that this sharing entry exists. You can write to this field when its value is either omitted or set to <code>Manual</code> (default). You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Valid values include:</p> <ul style="list-style-type: none"> <li>• <code>Owner</code>—User is the owner of the opportunity.</li> <li>• <code>Manual</code>—User or group has access because a user with “All” access manually shared the opportunity with the user or group.</li> <li>• <code>Rule</code>—User or group has access via an opportunity sharing rule.</li> <li>• <code>ImplicitChild</code>—User or group has access to the opportunity on the account associated with this opportunity.</li> <li>• <code>Sales Team</code>—User has access to the opportunity because the user is on the opportunity sales team for the opportunity. The <code>OpportunityTeamMember</code> object sets the access level. See <code>OpportunityTeamMember</code> for more information.</li> </ul>
<code>UserOrGroupId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the user or group that has been given access to the opportunity. This field can't be updated.</p>

## Usage

This object allows you to determine which users and groups can view or edit opportunities owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

If an opportunity is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an opportunity for one or more of the following `RowCause` values, the records in the `OpportunityShare` object are compressed into one record with the highest level of access.

- `Manual`
- `Owner`

SEE ALSO:

[Object Basics](#)

## OpportunitySplit

`OpportunitySplit` credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, FilterGroup, Sort</p> <p><b>Description</b> ID of the opportunity for which the split is being created. Label is Opportunity ID.</p>
Split	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Read-only. Automatically-generated number identifying the split within the opportunity.</p>
SplitAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Monetary amount of the split. Label is Split Amount.</p>
SplitNote	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Enter any notes or comments about the split. Character limit is 255. Label is Split Note.</p>
SplitOwnerId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The opportunity owner. Label is <code>User ID</code>.</p>
SplitPercentage	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Split percentage that this team member will receive. If the split type is validated to a 100% total, this number can range from 0 to 100. If the total isn't validated, this number can range from 0 to 1,000. Label is <code>Split (%)</code>.</p>
SplitTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Auto-generated, numeric ID for the split type defined by the OpportunitySplitType object. This field is available in API version 28 and later. If this field is blank, the system automatically specifies the default split type for the opportunity amount, which is validated to 100%.</p>

## Usage

Use the OpportunitySplit object to manage splits for an opportunity.

If you change the opportunity owner using the API, the old owner remains on the opportunity team with either Read-only access, or the level of access specified in your organization-wide defaults.

## OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

There are two default split types: revenue splits, which must total 100%, and overlay splits, which can total any percentage.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Describes the purpose of the split type, providing context to future developers.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique name of the object in the API. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Enables or disables the split type.</p>
IsTotalValidated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the split must total 100%. If <code>false</code>, the split can total any percentage.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates language of split labels in the user interface.</p>
ManageableState	<p><b>Type</b></p> <p>ManageableState enumerated list</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Indicates the manageable state of the specified component that is contained in a package:</p> <ul style="list-style-type: none"> <li>• beta</li> <li>• deleted</li> <li>• deprecated</li> <li>• deprecatedEditable</li> <li>• installed</li> <li>• installedEditable</li> <li>• released</li> <li>• unmanaged</li> </ul> <p>This field is available in API version 38.0 and later.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The user-interface label for the split type.</p>
NamespacePrefix	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the</li> </ul>

Field Name	Details
	<p>installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</p> <ul style="list-style-type: none"> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul> <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
<code>SplitEntity</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The containing record type, such as an opportunity. Available in API version 30 and later.</p>
<code>SplitField</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates which currency field of the opportunity object is split. Available in API version 30 and later.</p>
<code>SplitDataStatus</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the status of the split type. Available in API version 30 and later.</p>

## OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
DefaultProbability	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort,</p> <p><b>Description</b> The default percentage estimate of the confidence in closing a specific opportunity for this opportunity stage value. Label is <b>Probability (%)</b>.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Description of this opportunity stage value. Limit: 255 characters.</p>
ForecastCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The default forecast category for this opportunity stage value. The forecast category automatically determines how opportunities are tracked and totaled in a forecast.</p>
ForecastCategoryName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Available in API version 12.0 and later. The default forecast category value for this opportunity stage value.</p>
IsActive	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this opportunity stage value is active (<code>true</code>) or not (<code>false</code>). Inactive opportunity stage values are not available in the picklist and are retained for historical purposes only.</p>
IsClosed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this opportunity stage value represents a closed opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a closed opportunity. Label is <b>Closed</b>.</p>
IsWon	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this opportunity stage value represents a won opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a won opportunity. Label is <b>Won</b>.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this opportunity stage value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number used to sort this value in the opportunity stage picklist. These numbers are not guaranteed to be sequential, as some previous opportunity stage values might have been deleted.</p>

## Usage

This object represents a value in the opportunity stage picklist, which provides additional information about the stage of a Opportunity, such as its probability or forecast category. Query this object to retrieve the set of values in the opportunity stage picklist, and then use that information while processing Opportunity records to determine more information about a given opportunity. For example, the application could test whether a given opportunity is won or not based on its `StageName` value and the value of the `IsWon` property in the associated OpportunityStage object.

This object is read-only via the API.

[Object Basics](#)

## OpportunityTag

---

Associates a word or short phrase with an Opportunity.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the tagged item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter</p>

Field Name	Details
	<p><b>Description</b></p> <p>ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Restricted picklist</p> <p><b>Description</b></p> <p>Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

OpportunityTag stores the relationship between its parent TagDefinition and the Opportunity being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

## OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

See also UserTeamMember, which represents a User who is on the default opportunity team of another user.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Restricted picklist</p>

Field	Details
	<p><b>Description</b></p> <p>Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.</p>
IsDeleted	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter</p> <p><b>Description</b></p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p> <p> <b>Note:</b> An OpportunityTeamMember record that is deleted is not moved to the Recycle Bin and cannot be undeleted, unless the record was cascade-deleted when deleting a related Opportunity. For directly deleted OpportunityTeamMember records, don't use the <code>isDeleted</code> field to detect deleted records in SOQL queries or <code>queryAll()</code> calls. Instead, use <code>getDeleted()</code>.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The team member name. This read-only field is available in API version 30.0 and later.</p>
OpportunityAccessLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Nillable, Restricted picklist</p> <p><b>Description</b></p> <p>Opportunity access level for this team member. Valid values:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul> <p>This field is supported in triggers, but not in workflows or validation rules. It is editable in API version 36.0 and later.</p>
OpportunityId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter</p> <p><b>Description</b></p> <p>Required. ID of the Opportunity associated with this opportunity team. This field can't be updated.</p>

Field	Details
PhotoURL	<p><b>Type</b> URL</p> <p><b>Properties</b> Filter, Nillable, Sort, Group</p> <p><b>Description</b> Read only. Retrieves the users Chatter photo URL. This field is available in API version 32.0 and later.</p>
TeamMemberRole	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Role that the team member has on the opportunity. The org's admin sets the valid values in the Opportunity Team Roles picklist. Label is <b>Team Role</b>.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort, Group</p> <p><b>Description</b> Read only. Retrieves the user's title. This field is available in API version 36.0 and later.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Required. ID of the User who is a member of the opportunity team. This field can't be updated.</p>

## Usage

If you create a record for this object and it matches an existing record, the system updates any modified fields and returns the existing record.

In the user interface, users can set up an opportunity team for the opportunities they own. The opportunity team includes other users that are working on the opportunity with them. This object is available only in organizations that have enabled team selling.

 **Note:** The behavior for changing ownership of opportunities is different using the user interface when the previous owner is on an opportunity team. For example, when you change the owner of an opportunity using the API, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. However,

performing this same action in the user interface allows you to select the access level for the previous owner when the previous owner is on an opportunity team.

## Order

---

Represents an order associated with a contract or an account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Sort, Update</p> <p><b>Description</b> Required. ID of the Account associated with this order. Can only be updated when the order's <code>StatusCode</code> value is <code>Draft</code>.</p>
ActivatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the User who activated this order.</p>
ActivatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date and time when the order was activated.</p>
BillingAddress	<p><b>Type</b> address</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b></p>
BillingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the billing address for this order. Maximum size is 40 characters.</p>
BillingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country for the billing address for this order. Maximum size is 80 characters.</p>
BillingCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO country code for the billing address for this order.</p>
BillingEmailAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Email address for this order's billing address.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
BillingGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Accuracy level of the geocode of the address.</p>
BillingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between <math>-90</math> and <math>90</math> with up to 15 decimal places.</p>
BillingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between <math>-180</math> and <math>180</math> with up to 15 decimal places.</p>
BillingPhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Phone number for this order's billing address.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
BillingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal code for the billing address for this order. Maximum size is 20 characters.</p>
BillingState	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the billing address for this order. Maximum size is 80 characters.</p>
BillingStateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO state code for the order's billing address.</p>
BillingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street address for the billing address.</p>
BillToContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contact that the order is billed to.</p>
CompanyAuthorizedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the user who authorized the account associated with the order.</p>
CompanyAuthorizedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date on which your organization authorized the order.</p>
ContractId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contract associated with this order. Can only be updated when the order's <code>StatusCode</code> value is <i>Draft</i>.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Three-letter ISO 4217 currency code.</p>
CustomerAuthorizedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contact who authorized the order.</p>
CustomerAuthorizedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date on which the contact authorized the order.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the order.</p>
EffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Date at which the order becomes effective. Label is <b>Order Start Date</b>.</p>

Field Name	Details
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date at which the order ends. Label is <b>Order End Date</b>.</p>
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of <code>OrderTotalAmount</code> and <code>OrderTotalTaxAmount</code>.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
IsReductionOrder	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Determines whether an order is a reduction order. Label is <b>Reduction Order</b>.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name for this order.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID for the opportunity that's associated with this order.</p>
OrderedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time that the order was placed.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
OrderNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Order number assigned to this order (not the unique, system-generated ID assigned during creation). Maximum size is 30 characters.</p>
OrderReferenceNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Order reference number assigned to this order. Maximum size is 80 characters.</p>

Field Name	Details
OriginalOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Optional. ID of the original order that a reduction order is reducing, if the reduction order is reducing a single order. Label is <b>Original Order</b>.</p> <p>Editable only if <code>isReductionOrder</code> is <code>true</code>. If the reduction order is reducing more than one order, leave blank.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. ID of the User or queue that owns this order.</p>
PoDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date of the purchase order.</p>
PoNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number identifying the purchase order. Maximum is 80.</p>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required. ID of the price book associated with this order.</p>
QuoteId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the quote that's associated with this order.</p> <p>If you set <code>QuoteId</code> to null, <code>QuoteLineItemId</code> on all of the order's child order products is set to null.</p>
<code>RecordTypeId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the record type assigned to this order.</p>
<code>RelatedOrderId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The original order that a change order was created from.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
<code>SalesChannelId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Reference to a sales channel entity.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
<code>ShippingAddress</code>	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p>

Field Name	Details
	<b>Description</b> Shipping address for the order.
ShippingCity	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> City of the shipping address. Maximum size is 40 characters.
ShippingCountry	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Country of the shipping address. Maximum size is 80 characters.
ShippingCountryCode	<b>Type</b> picklist <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> ISO country code for the order's shipping address.
ShippingGeocodeAccuracy	<b>Type</b> picklist <b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update <b>Description</b> Accuracy level of the geocode of the shipping address.
ShippingLatitude	<b>Type</b> double <b>Properties</b> Create, Filter, Nillable, Sort, Update <b>Description</b> Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.
ShippingLongitude	<b>Type</b> double

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
ShippingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal code of the shipping address. Maximum size is 20 characters.</p>
ShippingState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State of the shipping address. Maximum size is 80 characters.</p>
ShippingStateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO state code for the order's shipping address.</p>
ShippingStreet	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street address of the shipping address. Maximum of 255 characters.</p>
ShipToContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contact that the order is shipped to.</p>

Field Name	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Picklist of values that indicate order status. Each value is within one of two status categories defined in <i>StatusCode</i>. For example, the status picklist might contain <i>Draft</i>, <i>Ready for Review</i>, and <i>Ready for Activation</i> values with a <i>StatusCode</i> of <i>Draft</i>.</p>
StatusCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status category for the order. An order can be either <i>Draft</i> or <i>Activated</i>. Label is <b>Status Category</b>.</p>
TaxLocaleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of tax calculation that Salesforce uses for the order's order items. VAT regions use gross tax, which includes tax in all sale amounts. US regions use net tax, which calculates tax separately from the initial sale amount and then adds the sale and tax amounts together in a total. When you create an order, Salesforce populates gross tax or net tax fields based on the value of <i>TaxLocaleType</i>.</p> <p><b>Gross Tax Fields</b></p> <ul style="list-style-type: none"> <li>TotalAdjDeliveryAmtWithTax</li> <li>TotalAdjProductAmtWithTax</li> <li>TotalProductAdjDistAmtWithTax</li> <li>TotalDeliveryAdjDistAmtWithTax</li> </ul> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The total amount for the order products associated with this order.</p> <p>This field is available in API v48.0 and later.</p>
TotalDeliveryAdjDistAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

**Field Name****Details****Description**

Roll-up of the order's delivery adjustment distributed amounts. Used only when the Order Adjustment Group has a Type value of Header.

To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.

This field is available in API v48.0 and later.

TotalDeliveryAdjDistAmtWithTax

**Type**

currency

**Properties**

Filter, Nillable, Sort

**Description**

Roll-up of the order's delivery adjustment distributed amounts and tax. Used only when the Order Adjustment Group has a Type value of Header.

This is a gross tax field.

To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.

This field is available in API v49.0 and later.

TotalDeliveryAdjDistTaxAmount

**Type**

currency

**Properties**

Filter, Nillable, Sort

**Description**

Roll-up of the order's delivery adjustment distributed tax amounts. Used only when the Order Adjustment Group has a Type value of Header.

To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.

This field is available in API v48.0 and later.

TotalProductAdjDistAmount

**Type**

currency

**Properties**

Filter, Nillable, Sort

**Description**

Roll-up of the order's product adjustment distributed amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header.

## Usage

The `Status` field specifies the current state of an order. Status strings represent its current state (*Draft* or *Activated*).

When a client application creates an order, the `Status Code` must be *Draft* and the `Status` must be any value that corresponds to a `Status Code` of *Draft*. The application can then activate an order by updating it and setting the value in its `Status` field to an *Activated* state; however, the `Status` field is the only field you can update when activating the order.

After an order is activated, your client application can change the `Status` back to the *Draft* state—but only if the order doesn't have any child reduction order products. Your client application can delete orders when the `Status` is *Draft* but not when its `Status` is *Activated*.

Client applications can use the API to create, update, delete, and query any Attachment associated with an order.

## Orders Without Price Books

If your organization manages products and Price books in an external platform, you can use Salesforce API to create orders and order items without values for their Price book and Price book entry fields. This feature is available only for Salesforce orgs with the B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus packages. Admins enable orders without Price books by going to Salesforce Order Settings and selecting the Optional Price Book setting.

In a standard order, Salesforce prompts the sales rep to select a Price book when they add the first order product to the order. The sales rep can then add order products that have price book entries in the selected price book. In an order without a Price book, Salesforce hides the order's Add Products button and Edit Products button so that sales reps must manage their products and price books using their external system.

You can create orders without Price books only by creating an order with Salesforce API and leaving the `Pricebook2Id` field null. Orders without Price books follow several different guidelines compared to standard orders.

- Orders without price books don't support reduction orders or change orders.
- Order products without price book entries require list prices.
- Orders without price books support only order items without price book entries. Orders with price books support only order items with price book entries.
-  **Important:** Orders without Price books are supported with B2B licenses only. Salesforce Order Management requires price books for orders and price book entries for order products.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### OrderFeed (API version 29.0)

Feed tracking is available for the object.

### OrderHistory

History is available for tracked fields of the object.

### OrderOwnerSharingRule

Sharing rules are available for the object.

## OrderAdjustmentGroup

---

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the order adjustment group.</p>
GrandTotalAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all total amounts of all adjustments in this group, including tax.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> User-defined name of the order adjustment group.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the order related to the adjustments in this order adjustment group.</p>
RelatedAdjustmentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the original order's adjustment group. Useful for reference in change order scenarios.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total of all order adjustments in this order adjustment group, excluding tax.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total tax for all order adjustments in this order adjustment group.</p>
Type	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Shows the type of adjustment made.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Header</code>: — The adjustment was applied to the order's balance, and then distributed among the order products in the adjustment group.</li> <li>• <code>SplitLine</code>— The adjustment was applied to order product balances for the order products in the adjustment group.</li> </ul>

## OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of `OrderItemAdjustmentLineSummaries` that apply to `OrderItemSummaries` belonging to one `OrderSummary`. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

An `OrderAdjustmentGroupSummary` can represent an adjustment to an entire order as a group of adjustments to each of its products. For example, representing "10% off the order" as a set of 10% off adjustments to each product on the order. It can also represent an adjustment that applies to a subset of the products on an order. For example, representing "buy one, get one 50% off" as a 25% off adjustment to each of two products.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
<code>CurrencyIsoCode</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> ISO code for the currency of the <code>OrderSummary</code> associated with the adjustments in the group. The default value is USD.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the OrderAdjustmentGroupSummary. This field can be edited.</p>
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including tax, of the associated OrderItemAdjustmentLineSummaries.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the OrderAdjustmentGroupSummary.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderSummary associated with the OrderAdjustmentGroupSummary.</p>
OriginalOrderAdjGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the original OrderAdjustmentGroup associated with this summary object.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, not including tax, of the associated OrderItemAdjustmentlineSummaries.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAmount.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type of the OrderAdjustmentGroupSummary. Header represents an order-level adjustment with an OrderItemAdjustmentLineSummary for each OrderItemSummary on the OrderSummary. SplitLine represents any other related set of OrderItemAdjustmentLineSummaries.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Header</li> <li>• SplitLine</li> </ul> <p>If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>

# OrderDeliveryGroup

---

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

Field	Details
<code>DeliverToAddress</code>	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The delivery group's order items are delivered to this address. Created based on the values of the other <code>DeliverTo</code> fields.</p>
<code>DeliverToCity</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City address value. Sent to <code>DeliverToAddress</code>.</p>
<code>DeliverToCountry</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country address value. Sent to <code>DeliverToAddress</code></p>
<code>DeliverToGeocodeAccuracy</code>	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Geocode accuracy address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Latitude address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Longitude address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Name of the delivery recipient. Sent to <code>DeliverToAddress</code>.</p>
DeliverToPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal Code address value. Sent to <code>DeliverToAddress</code>.</p>
DeliverToState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State address value. Sent to <code>DeliverToAddress</code>.</p>

Field	Details
DeliverToStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street address value. Sent to <code>DeliverToAddress</code>.</p>
DeliveryInstructions	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Text field for users to add other delivery instructions.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> User-defined description for this delivery group.</p>
DesiredDeliveryDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The buyer's target delivery date for the order items included in the delivery group.</p>
EmailAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The buyer's email address.</p>
GiftMessage	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field	Details
	<p><b>Description</b> An optional gift message that the buyer can define if they're sending the order items as a gift to another recipient. Applies to all order items in the delivery group.</p>
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of the group's total delivery amount and total tax amount.</p>
IsGift	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> All items in the delivery group are gifts.</p>
OrderDeliveryGroupNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Unique number used for referencing this order delivery group.</p>
OrderDeliveryMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the order delivery method related to this order delivery group.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the parent order for this order delivery group. An order can have multiple order delivery groups.</p>
PhoneNumber	<p><b>Type</b> phone</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Phone number of the buyer.</p>
PromisedDeliveryDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Merchant-defined date that the items in this group will be delivered to the customer. Usually defined based on an estimated date from the shipping provider.</p>
RelatedDeliveryGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The original delivery group. Used for reference in change order scenarios.</p>
TotalAdjustmentAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all adjustments made to order items in the order delivery group.</p>
TotalAdjustmentAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all adjustments made to order items in the order delivery group, including tax. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.</p>
TotalAdjustmentTaxAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all adjustments made to tax lines for order items in the order delivery group.</p>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all Total Amount fields on order items within this delivery group. On an order item, the total amount equals the quantity multiplied by the unit price, including adjustments and tax.</p>
TotalLineAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all Total Line Amount fields on order items within this delivery group. On an order item, the total line amount equals the quantity multiplied by the unit price, before adjustments or tax.</p>
TotalLineAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all TotalLineAmtWithTax fields on order items within this delivery group. On an order item, the total line amount with tax equals the quantity multiplied by the unit price, plus tax, before adjustments.  This is a gross tax field.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v49.0 and later.</p>
TotalLineTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The sum of all Total Line Tax Amount fields on order items within this delivery group. On an order item, the total line tax amount equals the total tax for that line.</p>
TotalTaxAmount	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The sum of all Total Tax Amount fields on order items within this order delivery group.</p>

## OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that is not guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

## OrderDeliveryMethod

---

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

Field	Details
Carrier	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The carrier that the buyer chose for their delivery method. Developers must add values to this field.</p>
ClassOfService	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The carrier class of service that the buyer chose for their delivery method. Developers must add values to this field.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the delivery method.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Assign new delivery groups to active delivery methods.</p>

Field	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Default name of this record.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The user who owns an order delivery method record.</p>
ProductId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method.</p>
ReferenceNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Reference number for an external delivery method.</p>

## OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Name of the order field that was modified, or a special value to indicate some other modification to the order.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> New value of the modified order field. Maximum of 255 characters.</p>
OldValue	<p><b>Type</b> anyType</p>

Field Name	Details
	<p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Previous value of the modified order field. Maximum of 255 characters.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the order associated with this record.</p>

## Usage

Order history entries are automatically created each time an order is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, Jane Doe is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field-level security on the parent object.

[Order](#)

## OrderItem

Represents an order product that your organization sells.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
AdjustedLineAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

**Field Name****Details****Description**

Line amount following line adjustments, excluding tax.

To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.

This field is available in API v48.0 and later.

AdjustedLineAmtWithTax

**Type**

currency

**Properties**

Filter, Nillable, Sort

**Description**

Line amount following line adjustments, including tax.

This is a gross tax field.

To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.

This field is available in API v49.0 and later.

AvailableQuantity

**Type**

double

**Properties**

Filter, Nillable, Sort

**Description**

Amount of an order product that is available to be reduced. Value must be greater than or equal to 0. An order product is reducible only if AvailableQuantity is greater than 0.

Value is always 0 if the order product's parent order is a reduction order.

Description

**Type**

string

**Properties**

Create, Filter, Group, Nillable, Sort, Update

**Description**

Text description of this object.

EndDate

**Type**

date

**Properties**

Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	<p><b>Description</b> Optional. Last day the order product is available.</p>
GrossUnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Unit price including tax.  This is a VAT field that includes tax. Salesforce populates it on order creation only when <code>Order.TaxLocaleType</code> has a value of Gross.</p>
LineNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Used to organize lines on the order.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
ListPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> List price for the order product. Value is inherited from the associated <code>PriceBookEntry</code> upon order product creation.</p>
OrderDeliveryGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The delivery group for the order product.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>

Field Name	Details
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the order that this order product is a child of.</p>
OrderItemNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Automatically generated number that identifies the order product.</p>
OriginalOrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required if <code>isReductionOrder</code> on the parent order is <code>true</code>. ID of the original order product being reduced.</p>
PricebookEntryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the associated PricebookEntry. This field must be specified when creating OrderItem records. It can't be changed in an update.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Product2 associated with this OrderItem.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Number of units of this order product.</p>
QuoteLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the associated quote line item.  If this field is specified, the quote line item's Quoteld must match the Quoteld for the order product's parent order.</p>
RelatedOrderItemID	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Sort, Group</p> <p><b>Description</b> For change orders, shows the original order product.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
RoundedLineAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The rounded line amount, before tax and adjustments. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency.  To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.  This field is available in API v48.0 and later.</p>
RoundedLineAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The rounded line amount, including tax. Currency with decimal values of 0.5 and higher are rounded to the next-highest whole unit of currency.</p> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. <code>TypeCode</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Code for the order product.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Charge</code></li> <li>• <code>Product</code></li> </ul> <p>To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience.</p> <p>This field is available in API v48.0 and later.</p>
<code>UnitPrice</code>	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Unit price for the order product.</p>

## Usage

An order can have associated order product records only if the order has a price book associated with it. An order product must correspond to a product that is listed in the order's price book.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **OrderItemFeed (API version 29.0)**

Feed tracking is available for the object.

**OrderItemHistory**

History is available for tracked fields of the object.

## OrderItemAdjustmentLineItem

---

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

### Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The total value of the adjustment line.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Users can add a custom description to the record to provide additional detail.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p><b>Description</b> Name of the adjustment line.</p>
OrderAdjustmentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The order adjustment group that contains the order item adjustment line item.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The parent order of the the order item related to the adjustment line.</p>
OrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The order item that the adjustment line applies to.</p>
RelatedAdjustmentLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The original order item adjustment line. Useful for reference in change order scenarios.</p>
TotalAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Equals <code>TotalPrice + TotalTaxAmount</code> for the order item adjustment line item. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.</p>

Field	Details
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of tax applied to the adjustment line.</p>

## OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an OrderItemSummary. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

### Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Amount, not including tax, of the OrderItemAdjustmentLineSummary.  If the <code>OrderLifecycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>ISO code for the currency of the OrderItemSummary to which the adjustment applies. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>Description of the OrderItemAdjustmentLineSummary.</p> <p>This field can be edited.</p>

## OrderItemSummary

---

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
AdjustedLineAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of the OrderItemSummary.</p>
AdjustedLineAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total price of the OrderItemSummary, inclusive of adjustments and tax. This amount is equal to AdjustedLineAmount + TotalAdjustedLineTaxAmount.  This field is available in API version 49.0 and later.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> ISO code for the currency of the OrderSummary associated with the OrderItemSummary. The default value is USD.  Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the OrderItemSummary. This field can be edited.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> End date of the OrderItemSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
GrossUnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Unit price, including tax, of the OrderItemSummary. This value is equal to UnitPrice + the amount of tax on the UnitPrice.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.  This field is available in API version 49.0 and later.</p>
LineNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The order line number assigned to this OrderItemSummary. For example, if this object is the third in the displayed list of OrderItemSummaries belonging to the OrderSummary, this value is 3.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>

Field	Details
ListPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> List price of the product represented by this OrderItemSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the OrderItemSummary.</p>
OrderDeliveryGroupSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderDeliveryGroupSummary to which this object belongs.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderSummary to which this object belongs.</p>
OriginalOrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the original order item associated with this summary object.</p>
Product2Id	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the product represented by this OrderItemSummary.</p>
ProductCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Product code of the product represented by this OrderItemSummary.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Current total quantity of products represented by this order item summary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityReturned).  If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityAllocated	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Allocated quantity on this order item summary. This quantity is associated with one or more FulfillmentOrderLineItems.  If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityAvailableToCancel	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Quantity that can still be canceled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToFulfill.</p>

Field	Details
QuantityAvailableToFulfill	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Quantity available to be fulfilled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToCancel.</p>
QuantityAvailableToReturn	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Quantity available to be returned on this OrderItemSummary. Equal to QuantityFulfilled minus QuantityReturnInitiated.</p>
QuantityCanceled	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Canceled quantity on this OrderItemSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityFulfilled	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Fulfilled quantity on this OrderItemSummary. This quantity can no longer be canceled.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityNetOrdered	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Quantity available to be allocated on this OrderItemSummary. Equal to QuantityOrdered minus QuantityCanceled.</p>
QuantityOrdered	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Ordered quantity on this OrderItemSummary. It includes the originally ordered quantity plus any quantity added to the order later.  If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityReturned	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Returned quantity on this OrderItemSummary.  If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
QuantityReturnInitiated	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Quantity returned or pending return on this OrderItemSummary.  If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
ServiceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Service or start date of the OrderItemSummary.</p>

Field	Details
	<p>If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.</p>
<code>Status</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Status of the <code>OrderItemSummary</code>. The default value is <code>ORDERED</code>. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>ALLOCATED</code>—Allocated</li> <li>• <code>CANCELED</code>—Canceled</li> <li>• <code>FULFILLED</code>—Fulfilled</li> <li>• <code>ORDERED</code>—Ordered</li> <li>• <code>PAID</code>—Paid</li> <li>• <code>PARTIALLYALLOCATED</code>—Partially Allocated</li> <li>• <code>PARTIALLYFULFILLED</code>—Partially Fulfilled</li> <li>• <code>RESHIPPE</code>—Reshipped</li> <li>• <code>RETURNED</code>—Returned</li> </ul>
<code>StockKeepingUnit</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The stock keeping unit (SKU) of the <code>Product2</code> associated with the <code>OrderItemSummary</code>. This field is available in API version 49.0 and later.</p>
<code>TotalAdjustedLineTaxAmount</code>	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the <code>AdjustedLineAmount</code>.</p>
<code>TotalAdjustmentAmount</code>	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Total of all price adjustments applied to this OrderItemSummary.</p>
TotalAdjustmentAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of all price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalAdjustmentDistAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>
TotalAdjustmentDistAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of the order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentDistAmount + TotalAdjustmentDistTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalAdjustmentDistTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjustmentDistAmount.</p>
TotalAdjustmentTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Tax on the TotalAdjustmentAmount.</p>
TotalAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total price of the OrderItemSummary, inclusive of tax. This amount is equal to TotalPrice + TotalTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalLineAdjustmentAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all non-order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that don't belong to an OrderAdjustmentGroupSummary, or that belong to an OrderAdjustmentGroupSummary of type SplitLine.</p>
TotalLineAdjustmentAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all non-order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAdjustmentAmount + TotalLineAdjustmentTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalLineAdjustmentTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalLineAdjustmentAmount.</p>
TotalLineAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, not including adjustments or tax, of the OrderItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TotalLineAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total unadjusted amount of the OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalLineTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalLineAmount.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of the OrderItemSummary.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalPrice.</p>
Type	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Type of the OrderItemSummary. Delivery Charge indicates that the OrderItemSummary represents a delivery charge. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Delivery Charge (Charge)</li> <li>• Order Product (Product)</li> </ul> <p>If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TypeCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Type code of the OrderItemSummary. Charge indicates that the OrderItemSummary represents a delivery charge. Product indicates that it represents any other type of product, service, or charge.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Charge</li> <li>• Product</li> </ul> <p>If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
UnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Unit price of the product represented by the OrderItemSummary.</p>

Field	Details
	If the <code>OrderLifecycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code> , then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.

## OrderItemSummaryChange

---

Represents a change to an `OrderItemSummary`, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

Field	Details
<code>ChangeOrderItemId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the associated change order item.</p>
<code>ChangeType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Type of change represented by the OrderItemSummaryChange.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Cancel</li> <li>• DeliveryChargeAdjustment</li> <li>• ProductAdjustment</li> <li>• Return</li> </ul>
CurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>ISO code for the currency of the OrderSummary associated with the OrderItemSummaryChange. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
IsPreFulfillment	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Indicates whether the change occurs before the OrderItemSummary has been fulfilled.</p>
OrderItemSummary ChangeNumber	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>ID of the OrderItemSummaryChange.</p>
OrderItemSummaryId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the OrderItemSummary to which the change applies.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderSummary to which the associated OrderItemSummary belongs.</p>
Reason	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Reason for the change. You can customize this list. The list has one default value:</p> <ul style="list-style-type: none"> <li>Unknown</li> </ul>

## OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The total amount of the tax line.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Users can add a custom description to the record to provide additional detail.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the tax line.</p>
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the parent order for the order item related to the tax line</p>
OrderItemAdjustmentLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The order item adjustment line item that the tax line applies to.</p>
OrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> The order item that the tax line applies to.</p>
Rate	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The percentage value of the tax. Null if the tax is a flat amount.</p>
RelatedTaxLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The original order item tax line. Useful for reference in change order scenarios.</p>
TaxEffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The date used to calculate the effective tax rate.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn't set a value by default. Users can define automation to set and change the value as needed.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Actual</li> <li>• Estimated</li> </ul>

## OrderItemTaxLineItemSummary

---

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

### Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

### Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Amount of tax represented by the OrderItemTaxLineItemSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> ISO code for the currency of the OrderSummary associated with the OrderItemTaxLineItemSummary. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Update</p> <p><b>Description</b> Description of the OrderItemTaxLineItemSummary. This field can be edited.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the OrderItemTaxLineItemSummary.</p>
OrderItemAdjustmentLineSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If this object represents tax on an adjustment, this value is the ID of the OrderItemAdjustmentLineSummary to which the tax applies. If this value is null, the adjustment applies to an OrderItemSummary.</p>
OrderItemSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> If this object represents tax on an OrderItemSummary, this value is the ID of that OrderItemSummary. If this object represents tax on an adjustment, this value is the ID of the OrderItemSummary to which the adjustment applies.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderSummary that the associated OrderItemSummary or OrderItemAdjustmentLineSummary belongs to.</p>

Field	Details
OriginalOrderItemTaxLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the original order item tax line item associated with this summary object.</p>
Rate	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax rate used to calculate the Amount.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
TaxEffectiveDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Date on which the Amount was calculated. Important due to tax rate changes over time.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates whether the Amount is actual or estimated.  Possible values are:</p> <ul style="list-style-type: none"> <li>• Actual</li> <li>• Estimated</li> </ul>

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code> , then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.

## OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

**Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

Field	Details
<code>CreatedById</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> ID of the creator of the order owner sharing rule.</p>
<code>CreatedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p>

Field	Details
	<p><b>Description</b> Date when the order owner sharing rule was created.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the order owner sharing rule. Maximum length is 1,000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of the developer of the order owner sharing rule.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the group whose orders are shared.</p>
Id	<p><b>Type</b> ID</p> <p><b>Properties</b> Defaulted on create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> ID of the order owner sharing rule.</p>
LastModifiedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user who last modified the order owner sharing rule.</p>
LastModifiedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p>

Field	Details
	<p><b>Description</b> Date when the order owner sharing rule was last modified.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Namefield, Sort, Update</p> <p><b>Description</b> Name of the order owner sharing rule. Maximum length is 80 characters.</p>
OrderAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Access level for the order owner sharing rule.</p>
SystemModstamp	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p> <p><b>Description</b> System modification time for the order owner sharing rule.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user or group with whom order access is shared.</p>

## Usage

Use this object to manage the sharing rules for orders. For example, the following code creates an order owner sharing rule between two public groups, which can also contain portal users.

```
OrderOwnerSharingRule rule = new OrderOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx000000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx000000000001"); // Set the group of users to share records to
```

```
rule.setOrderAccessLevel("Edit");
connection.create(rule);
```

## OrderPaymentSummary

---

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

Unlike most summary objects, an OrderPaymentSummary is not related to a similarly named order payment object. Instead, it combines values from multiple payment objects that use the same payment method and apply to the same OrderSummary.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

### Fields

Field	Details
AuthorizationAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that has been authorized.</p>
AuthorizationReversalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the AuthorizationAmount that has been reversed.</p>
AvailableToCaptureAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that is available to be captured. Equal to AuthorizationAmount minus (CapturedAmount and PendingCaptureAmount and PendingReverseAuthAmount).</p>
AvailableToRefundAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that is available to be refunded. Equal to CapturedAmount minus (RefundedAmount and PendingCaptureAmount and PendingRefundAmount).</p>
BalanceAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total balance of all payments associated with this summary object.</p>
CapturedAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that has been captured.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> </ul>

Field	Details
	<ul style="list-style-type: none"><li>• GBP—British Pound</li><li>• USD—U.S. Dollar</li></ul> <p>This field is available in API version 49.0 and later.</p>
FullName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The full name of the payment method user.</p>
LastPaymentGatewayLogId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the most recent payment gateway log associated with the OrderPaymentSummary.</p>
LastPaymentGatewayMessage	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The most recent message received from the payment gateway associated with the OrderPaymentSummary.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Timestamp for when the current user last viewed a record related to this record. This field is available in API version 49.0 and later.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>

Field	Details
	This field is available in API version 49.0 and later.
Method	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the OrderPaymentSummary.</p>
OrderSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the OrderSummary associated with the OrderPaymentSummary.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who currently owns this OrderPaymentSummary. Default value is the user logged in to the API to perform the create.</p>
PaymentMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the payment method associated with this OrderPaymentSummary.</p>
PendingAuthorizationAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that is pending authorization.</p>
PendingCaptureAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Amount of the OrderPaymentSummary that is pending capture.</p>
PendingRefundAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that is pending refund.</p>
PendingReverseAuth Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the AuthorizationAmount that is pending reversal.</p>
RefundedAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Amount of the OrderPaymentSummary that has been refunded.</p>
Type	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The payment method type associated with the OrderPaymentSummary. For example, <i>visa</i>, <i>mastercard</i>, <i>check</i>, or <i>giftcard</i>.</p>

# OrderSummary

---

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the account or person account associated with the OrderSummary. It represents the shopper in the storefront.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
BillingAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Billing address associated with the OrderSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
BillingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Billing address city.</p>
BillingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Billing address country.</p>
BillingEmailAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Email address on the billing address.</p>
BillingGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The accuracy of the geocode for the billing address. Possible values are:</p> <ul style="list-style-type: none"> <li>• Address</li> <li>• Block</li> <li>• City</li> <li>• County</li> <li>• ExtendedZip</li> <li>• NearAddress</li> <li>• Neighborhood</li> <li>• State</li> <li>• Street</li> <li>• Unknown</li> <li>• Zip</li> </ul>
BillingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Used with BillingLongitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with BillingLatitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.</p>
BillingPhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Phone number of the billing address.</p>
BillingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Billing address postal code.</p>
BillingState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Billing address state.</p>
BillingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Billing address street.</p>
BillToContactId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Contact associated with the OrderSummary. It represents the shopper in the storefront when not using person accounts.</p> <p>If the <code>OrderLifeCycleType</code> field is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is available in API version 49.0 and later.</p>
ChangeOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Reserved for future use.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderSummary. The default value is USD.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• DKK—Danish Krone</li> <li>• EUR—Euro</li> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul> <p>This field is available in API version 49.0 and later.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the OrderSummary.</p> <p>This field can be edited.</p>

Field	Details
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount, including adjustments and tax, of the OrderSummary.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OrderedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date of the original order associated with this OrderSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
OrderLifeCycleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether the OrderSummary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged OrderSummary is stored in Salesforce for reference purposes.</p> <ul style="list-style-type: none"> <li>Some Order Management APIs reject input records that are associated with unmanaged OrderSummaries.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>Order Management does not update financial bucket fields on some records that are associated with unmanaged OrderSummaries.</li> <li>A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged OrderSummaries that are normally only accessible via APIs.</li> </ul> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>MANAGED—Managed</li> <li>UNMANAGED—Unmanaged</li> </ul> <p>This field is available in API version 49.0 and later.</p>
OrderNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the OrderSummary.</p>
OriginalOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the original order associated with this OrderSummary.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who currently owns this OrderSummary. Default value is the user logged in to the API to perform the create.</p>
PoNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Purchase order number associated with this OrderSummary.</p> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>

Field	Details
SalesChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the SalesChannel associated with this OrderSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p>
SalesStoreId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the RetailStore or WebStore associated with this OrderSummary.  If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.  This field is only available in Salesforce B2B Commerce orgs.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Status of the order summary. Unlike the Status and Status Category fields on the order and FulfillmentOrder objects, this field is optional.  We recommend that you use the same values in this picklist that you use in the Status picklist for the order object.</p>
TaxLocaleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The system used to handle tax on the original Order associated with the OrderSummary. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax.  Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>GROSS</code> (displays most prices and taxes as combined values)</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• Net (displays most prices and taxes as separate values)</li> </ul> <p>If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjDeliveryAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of all OrderItemSummaries of type code Charge belonging to this OrderSummary, inclusive of adjustments and tax. This amount is equal to TotalAdjustedDeliveryAmount + TotalAdjustedDeliveryTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjDistAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary. This amount is equal to TotalProductAdjDistAmount plus TotalDeliveryAdjDistAmount.</p>
TotalAdjDistAmountWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary, inclusive of tax. This amount is equal to TotalAdjDistAmount plus TotalAdjDistTaxAmount.</p> <p>This field is available in API version 49.0 and later.</p>
TotalAdjDistTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjDistAmount.</p>

Field	Details
TotalAdjProduct AmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of all OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of adjustments and tax. This amount is equal to TotalAdjustedProductAmount plus TotalAdjustedProductTaxAmount.  This field is available in API version 49.0 and later.</p>
TotalAdjusted DeliveryAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of all OrderItemSummaries of type code Charge belonging to this OrderSummary.</p>
TotalAdjusted DeliveryTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjustedDeliveryAmount.</p>
TotalAdjustedProduct Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of all OrderItemSummaries of type code Product belonging to this OrderSummary.</p>
TotalAdjustedProduct TaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalAdjustedProductAmount.</p>
TotalAmount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total, including adjustments but not tax, of all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedProductAmount plus TotalAdjustedDeliveryAmount.</p>
TotalDeliveryAdjDistAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all order-level price adjustments applied to OrderItemSummaries of type code Charge belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>
TotalDeliveryAdjDistAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all order-level price adjustments applied to OrderItemSummaries of type code Charge belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalDeliveryAdjDistAmount + TotalDeliveryAdjDistTaxAmount. This field is available in API version 49.0 and later.</p>
TotalDeliveryAdjDistTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalDeliveryAdjDistAmount.</p>
TotalProductAdjDistAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.</p>

Field	Details
TotalProductAdjDistAmtWithTax	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalProductAdjDistAmount + TotalProductAdjDistTaxAmount. This field is available in API version 49.0 and later.</p>
TotalProductAdjDistTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Tax on the TotalProductAdjDistAmount.</p>
TotalTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total tax on all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedDeliveryTaxAmount plus TotalAdjustedProductTaxAmount.</p>

IsSandbox	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Indicates whether the current organization is a sandbox (<code>true</code>) or production (<code>false</code>) instance. Available in API version 31.0 or later.</p>
LanguageLocaleKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The same as <code>Language</code>, the two-to-five character code which represents the language and locale ISO code. This controls the language for labels displayed in an application.</p>
LastWebToCaseDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The last date that a web form submission was converted to a case.</p>
LastWebToLeadDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable</p>

Field	Details
	<p><b>Description</b> The last date that a web form submission was converted to a lead.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
MaxActionsPerRule	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Maximum number of actions per workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.</p>
MaxRulesPerEntity	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Maximum number of rules per object, inclusive of workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.</p>
MonthlyPageViewsEntitlement	<p><b>Type</b> int</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of page views allowed for the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.</p>
MonthlyPageViewsUsed	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of page views used in the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the organization.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
OrganizationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Edition of the organization, for example Enterprise Edition or Unlimited Edition.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Phone number for the organization.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal code for the address of the organization. Limit: 20 characters.</p>
PreferencesAutoSelectIndividualOnMerge	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p>
PreferencesEventScheduler	<p><b>Type</b> boolean</p> <p><b>Properties</b> Update</p> <p><b>Description</b> Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).</p>
PreferencesRequireOpportunityProducts	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).</p>
<code>PreferencesS1BrowserEnabled</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Indicates whether the Salesforce mobile web is enabled for all users in your organization (<code>true</code>) or is disabled for all users (<code>false</code>).  This field is available in API version 29.0 or later.</p>
<code>PreferencesTerminateOldestSession</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Indicates whether the oldest login session is automatically closed when a policy specifying the maximum number of sessions is triggered.  This field is available in API version 35.0 or later.</p>
<code>PreferencesTransactionSecurityPolicy</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> Indicates whether the Transaction Security feature has been enabled.  This field is available in API version 35.0 or later.</p>
<code>PrimaryContact</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of the primary contact for the organization. Limit: 80 characters.</p>

Field	Details
ReceivesAdminInfoEmails	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the organization receives administrator emails (<code>true</code>) or not (<code>false</code>).</p>
ReceivesInfoEmails	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the organization receives informational email from Salesforce (<code>true</code>) or not (<code>false</code>).</p>
SelfServiceCasePlural	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The plural version of the term used to represent the Case object in the Self-Service portal.</p>
SelfServiceCaseSingle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The singular version of the term used to represent the Case object in the Self-Service portal.</p>
SelfServiceCaseSubmitRecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the record type associated with a case submitted via the Self-Service portal.</p>
SelfServiceDefaultCaseOrigin	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The default origin of a case submitted via the Self-Service portal.</p>
SelfServiceEmailSenderAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The Self-Service email address from which new Self-Service user and password email messages are sent, such as <code>support@acme.com</code>.</p>
SelfServiceEmailSenderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The name associated with the email address in the <code>SelfServiceEmailSenderAddress</code> field, such as <code>Acme Customer Support</code>.</p>
SelfServiceEmailUserOnCaseCreationTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the email template used when email is sent to a Self-Service user when he or she creates a case.</p>
SelfServiceEnabledForResponseRules	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> Indicates whether the Self-Service portal is enabled for auto-response rules (<code>true</code>) or not (<code>false</code>).</p>
SelfServiceFeatureConfig	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Update</p>

Field	Details
	<p><b>Description</b> An integer representing the active Self-Service feature configuration for this organization.</p>
SelfServiceLogoutUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The Web page that displays when a Self-Service user logs out of the Self-Service portal.</p>
SelfServiceMaxNumSuggestions	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The maximum number of suggested solutions allowed for a Self-Service case.</p>
SelfServiceNewCommentCheckedByDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Update</p> <p><b>Description</b> If <code>true</code>, When a customer notification is automatically sent when a new comment is added to a case.</p>
SelfServiceNewCommentTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the email template used to send a notification to Self-Service users when a public comment is added to one of their cases.</p>
SelfServiceNewPassTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p>

Field	Details
	<p><b>Description</b> The ID of the email template used when new passwords are generated for Self-Service users.</p>
SelfServiceNewUserTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the email template used when new Self-Service users are enabled.</p>
SelfServicePageHeight	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The maximum height in pixels of Self-Service pages.</p>
SelfServicePageWidth	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The maximum width in pixels of Self-Service pages.</p>
SelfServiceSelfClosedCaseStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The default status for cases closed by Self-Service users.</p>
SelfServiceSolutionCategoryAvailable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Update</p> <p><b>Description</b> Indicates whether solution categories are available in the Self-Service portal (<code>true</code>) or not (<code>false</code>).</p>

Field	Details
SelfServiceSolutionCategoryStartNodeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the top-level category in the Self-Service portal.</p>
SelfServiceSolutionPlural	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The plural version of the term used to represent the Solution object in the Self-Service portal.</p>
SelfServiceSolutionSingle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The singular version of the term used to represent the Solution object in the Self-Service portal.</p>
SelfServiceStyleSheetUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The public URL of your organization's Self-Service portal stylesheet.</p>
SelfServiceWelcomePageConfig	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> Integer that represents the welcome page configuration for the Self-Service portal.</p>
SelfServiceWelcomeText	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The custom welcome message displayed at the top of the Self-Service home page when Self-Service users log in. Limit: 32,000 characters.</p>
SignupCountryIsoCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ISO country code specified by the user for a sign-up request.</p>
State	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>State of the address of the organization. Limit: 80 characters.</p>
StateCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The ISO state code for the organization's address.</p>
Street	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Street address for the organization. Limit: 255 characters.</p>
TrialExpirationDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date that this organization's trial license expires.</p>
TimeZoneSidKey	<p><b>Type</b></p> <p>picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Identifies the default time zone of the organization.</p>
UiSkin	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The user interface theme selected for the organization.</p>
UsesStartDateAsFiscalYearName	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year (<code>true</code>) or not (<code>false</code>). For example, if the fiscal year begins in February 2006, a <code>true</code> value means the fiscal year is FY2006, and a <code>false</code> value means the fiscal year is FY2007.</p>
UsesWebToCase	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> Indicates whether this organization can use Web-to-Case (<code>true</code>) or not (<code>false</code>).</p>
UsesWebToLead	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> Indicates whether this organization can use Web-to-Lead (<code>true</code>) or not (<code>false</code>).</p>
WebToCaseAssignedEmailTemplateId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the email template used when a new case is assigned to a user via Web-to-Case.</p>
WebToCaseCreatedEmailTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the email template used when a new case is created via Web-to-Case.</p>
WebToCaseDefaultCreatorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> The ID of the user specified as the default creator of cases created via Web-to-Case.</p>
WebToCaseDefaultOrigin	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The default value for the <b>Case Origin</b> field on cases submitted via Web-to-Case. Limit: 40 characters.</p>

## Usage

Query this object to obtain information about an organization's settings. Only one organization object exists per organization.

SEE ALSO:

[Object Basics](#)

## OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The auto-generated ID of this OrgDeleteRequest object.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who initiated the org delete request.</p>
RequestType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether you want to deactivate or reactivate the org. When you deactivate an org, you have 30 days to change your mind and reactivate it. After 30 days, the org is locked, and you must contact Salesforce Customer Support to reactivate it. After 60 days, the org is permanently deleted from Salesforce servers.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• Deactivate</li> <li>• Reactivate</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [OrgDeleteRequestOwnerSharingRule](#)

Sharing rules are available for the object.

### [OrgDeleteRequestShare](#)

Sharing is available for the object.

# OrgWideEmailAddress

---

Represents an organization-wide email address for user profiles.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Only users with the View Setup and Configuration permission can access this object.

## Fields

Field	Details
Address	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The organization-wide email address.</p>
IsAllowAllProfiles	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, any user profile in your organization can use this object. If <code>false</code>, only specified user profiles can use this object when sending email. If you do not have the appropriate user profile, you can't use this object.</p>
DisplayName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The name that is used to identify the sender of the email.</p>

## Usage

This object represents an email alias for user profiles. You can pass in the ID to an `OrgWideEmailAddress` record when calling `sendEmail()` for a `SingleEmailMessage`.

## OutOfOffice

---

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `undelete()`, `upsert()`, `update()`

## Special Access Rules

In Lightning Experience, lets users set a message next to their name in Chatter to show when they plan to be out of the office. The message appears in Lightning Experience, Salesforce Classic, and mobile views. Messages expire automatically after their end date. You can control whether out-of-office functionality is available to your users. Set it up in the Out of Office section in **Setup > Chatter Settings**.

Only internal users can set an out-of-office message.

## Fields

Field Name	Details
EndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date of the last day a person is out of the office. After the message expires, it goes away automatically.</p>
IsEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create</p> <p><b>Description</b> Indicates whether an out-of-office message can be displayed for a user. The default value is <code>true</code>.</p>
Message	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The message portion of the out-of-office message. This text, along with start and end dates, is appended to the user's name in the Salesforce user interface. The maximum length of this string is 40 characters.</p>
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date of the first day a person is out of the office.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user associated with the out-of-office message.</p>

## Usage

- Maximum message length is 40 characters.
- Users can set only their own out-of-office message. An admin can set an out-of-office message for any user.
- The out-of-office message can be set only for internal users.

## OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

## Supported Calls

`describeSObjects()`

## Fields

Field Name	Details
ContentDocumentId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the document.</p>
ContentSize	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Size of the document in bytes.</p>
ContentUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the <code>FileType</code>.  This field is available in API version 31.0 and later.</p>
ExternalDataSourceName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.  This field is available in API version 32.0 and later.</p>
ExternalDataSourceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce.  This field is available in API version 35.0 and later.</p>

Field Name	Details
FileExtension	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> File extension of the document. This field is available in API version 31.0 and later.</p>
FileType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Type of document, determined by the file extension.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the owner of the document.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Title of the document.</p>

## OwnerChangeOptionInfo

---

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the `OwnerChangeOptionInfo` object in Tooling API instead. For more information, see [OwnerChangeOptionInfo](#) in the Tooling API.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Use `EntityId` or `DurableId` when querying this object.

# PackageLicense

---

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

## Supported Calls

`query()`, `retrieve()`

## Fields

Field Name	Details
AllowedLicenses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of users allowed to use the package.</p>
ExpirationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the package license expires.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The namespace prefix associated with the package.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the license. Possible values are: <code>Active</code>, <code>Expired</code>, <code>Free</code>, and <code>Trial</code>.</p>
UsedLicenses	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of users who have a license to the package.</p>

## Usage

Use this object to determine the number of licenses allowed and in use for a managed package installed in your organization.

The following example demonstrates the use of the API to manage licenses for a package. The example defines an Apex class that does the following.

- Retrieves the PackageLicense record for the specified package (identified by its namespace prefix).
- Defines a function that returns a list of all users with the specified profile.
- Creates a UserPackageLicense record for each user with that profile, which has the effect of assigning a license for the package to all users with that profile.
- Returns an error message if the number of users exceeds the number of available licenses.

```
public class AssignPackageLicense {

    static String PACKAGE_NAMESPACE_PREFIX = 'acme_101';
    static String PROFILE_ID = '00exx000000jz1SAAQ';
    public static String exceptionText {get; set;}

    public AssignPackageLicense() {
        exceptionText = 'Initialized';
    }

    static List<User> getUsersWithProfile(){
        String userQuery = 'SELECT Id FROM User WHERE ProfileId = :PROFILE_ID';
        List<User> matchingUsers = new List<User>();
        matchingUsers = [SELECT Id FROM User WHERE ProfileId = :PROFILE_ID];
        return matchingUsers;
    }

    public static void assignLicenseByProfile() {
        //find the PackageLicense Id
        PackageLicense pl = [SELECT Id, NamespacePrefix, AllowedLicenses, UsedLicenses,
            ExpirationDate, Status FROM PackageLicense WHERE
            NamespacePrefix = :PACKAGE_NAMESPACE_PREFIX];
        System.assert(pl != null, 'PackageLicense cannot be null.');
```

```
List<User> usersToAssignLicenses = getUsersWithProfile();
List<UserPackageLicense> firstUPLs = new List<UserPackageLicense>();

//create a new UserPackageLicense record for each user with the specified profile

for (Integer i = 0; i< usersToAssignLicenses.size(); i++){
    UserPackageLicense upl = new UserPackageLicense();
    upl.PackageLicenseId = pl.Id;
```

```

        upl.UserId = usersToAssignLicenses[i].Id;
        firstUPLs.add(upl);
    }

    try {
        //bulk insert
        insert(firstUPLs);
    } catch(DmlException e) {
        for (Integer i = 0; i < e.getNumDml(); i++) {
            // process exception here
            System.debug(e.getDmlMessage(i));
            String status = e.getDmlStatusCode(i);
            System.debug(status + ' ' + e.getDmlMessage(i));
            if(status.equals('LICENSE_LIMIT_EXCEEDED')){
                exceptionText = 'You tried to assign more licenses than available. '
                    + ' You tried to create '+ firstUPLs.size()+ ' licenses but only have '
                    + (pl.AllowedLicenses - pl.UsedLicenses) + ' licenses free.';
                System.debug(exceptionText);
            }
        }
    }
}
}
}
}

```

## PackagePushError

---

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

## Supported Calls

describeSObjects(), query(), retrieve()

## Fields

Field Name	Details
ErrorDetails	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Explanation of the error.</p>
ErrorMessage	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The error code that appears in the API.</p>
ErrorSeverity	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Valid values are:</p> <ul style="list-style-type: none"> <li>• Error</li> <li>• Warning</li> </ul>
ErrorTitle	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The error message title that appears in the API.</p>
ErrorType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Valid values are:</p> <ul style="list-style-type: none"> <li>• ApexTestFailure</li> <li>• DeployError</li> <li>• FeatureMissing</li> <li>• IneligibleUpgrade</li> <li>• LimitExceeded</li> <li>• LockingFailure</li> <li>• PACErrror</li> <li>• UnclassifiedError</li> </ul>
PackagePushJobId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

**Field Name****Details****Description**

Required. The parent push job record ID.

## Usage

Suppose that your push upgrade request wasn't successful due to some of its jobs failing. Let's write some code to find out what those errors were.

This code sample uses the Web Services Connector (WSC).

```
// Retrieves all PackagePushError objects associated with the PackagePushJob with the given
// ID
final String PACKAGE_PUSH_ERROR_QUERY = "Select ErrorMessage, ErrorDetails, ErrorTitle,"
+ " ErrorSeverity, ErrorType from PackagePushError where PackagePushJobId = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_ERROR_QUERY, job.getId()));

StringBuilder errorMessages = new StringBuilder();
errorMessages.append("Errors for PackagePushJob [").append(job.getId()).append("]:")
    .append("\n");

// There can be multiple PackagePushErrors for a given PackagePushJob
for(SObject r : queryResult.getRecords()) {
    PackagePushError e = (PackagePushError) r;
    errorMessages.append("Title: ").append(e.getErrorTitle()).append("\n");
    errorMessages.append("Severity: ").append(e.getErrorSeverity()).append("\n");
    errorMessages.append("Type: ").append(e.getErrorType()).append("\n");
    errorMessages.append("Message: ").append(e.getErrorMessage()).append("\n");
    errorMessages.append("Details: ").append(e.getErrorDetails()).append("\n");
    errorMessages.append("\n");
}

String errors = errorMessages.toString();
```

## PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
PackagePushRequestId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required. The ID of the parent push request record which must have been created.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status of the job. Valid values are:</p> <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Created (default)</li> <li>• Failed</li> <li>• In Progress</li> <li>• Pending</li> <li>• Succeeded</li> </ul> <p>Don't specify this value when you create the push job. The default value of <code>Created</code> is used.</p>
SubscriberOrganizationKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required. The organization key of the org where the package is upgraded. This references <code>orgKey</code> in <code>PackageSubscriber</code>.</p>

## Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using `MetadataPackageVersion` and created the push request using `PackagePushRequest`. Now let's write some code to create a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
PackageSubscriber[] subscribers = new PackageSubscriber[];
```

```
// ... populate eligible and desired subscribers

// Create the PackagePushJob array
PackagePushJob[] jobs = new PackagePushJob[subscribers.length];

for (int i = 0; i < subscribers.length; i++) {
    // create a job for each subscriber...
    PackagePushJob job = new PackagePushJob();
    // ... associate it to the PackagePushRequest ppr...
    job.setPackagePushRequestId(ppr.getId());
    // ... and add the orgKey
    job.setSubscriberOrganizationKey(subscribers[i].getOrgKey());
    jobs[i] = job;
}

// Save the jobs
SaveResult[] saveResults = conn.create(jobs);

// Add the newly generated id's to the PackagePushJob objects
for (int i = 0; i < saveResults.length; i++) {
    if (saveResults[i].isSuccess()) {
        jobs[i].setId(saveResults[i].getId());
    }
}
}
```

Or, if you're using REST API, submit a POST request to the PackagePushJob sObject endpoint, as in the following example. SOAP API is also supported. This example returns the push job ID (starting with ODX) that is required to query the status of the job.

```
POST
/services/data/v38.0/objects/packagepushjob/
{
  "PackagePushRequestId" : "ODV...",
  "SubscriberOrganizationKey" : "00DR00..."
}
```

### Checking the Status of a Push Job

To check the job status, simply query the Status field. For example:

```
SELECT Id, Status FROM PackagePushJob WHERE PackagePushRequestId ='ODV...'
```

Here's an example in Java.

```
// Finds the status of the PackagePushJob with the given id
String PACKAGE_PUSH_JOB_STATUS_QUERY = "Select status from PackagePushJob where Id = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_JOB_STATUS_QUERY,
job.getId()));

// extract the status from the QueryResult
String status = ((PackagePushJob) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushJob instance with the latest status
job.setStatus(status);
```

You can also continuously poll the job status until the job is done. The following Java example polls the status every 10 seconds.

```
// The set of states that indicate a PackagePushJob has completed
final Set<String> TERMINAL_STATES = new HashSet<>();
TERMINAL_STATES.add("Succeeded");
TERMINAL_STATES.add("Failed");
TERMINAL_STATES.add("Canceled");

String status = queryJobStatus(job); // this method returns the status as retrieved in the
previous code sample

// If the status is not one of the completed statuses...
while(!TERMINAL_STATES.contains(status)) {
    Thread.sleep(10 * 1000); // ... wait 10 seconds and try again
    status = queryJobStatus(job);
}
```

## PackagePushRequest

---

Represents the push request for upgrading a package in one or many orgs from one version to another version.

### Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field Name	Details
PackageVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required. The non-beta, non-deprecated package version that the package is being upgraded to.</p>
ScheduledStartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time (UTC) at which the push request is processed, in ISO 8601 format. Set this value to the earliest time that you want Salesforce to attempt to start the push. As a best practice, schedule pushes at off-peak hours like 1:00 AM Saturday. If you don't specify a value, the push starts when the package push request's Status is set to Pending.</p>

Field Name	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of the push. Valid values are:</p> <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Created (default)</li> <li>• Failed</li> <li>• In Progress</li> <li>• Pending</li> <li>• Succeeded</li> </ul> <p>Don't specify this value when you create the push request. The default value of Created is used. Later, change the status to Pending to schedule the push upgrade.</p>

## Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion. Now let's write some code to create a push request, which holds a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
// Create a new PackagePushRequest for the versionId to upgrade to
// (for example, versionId is the "04t..." id of version
// 3.4.6 of the package
PackagePushRequest ppr = new PackagePushRequest();
ppr.setPackageVersionId(versionId);

// Optionally, set the start time of the PackagePushRequest to schedule it to begin
// automatically; scheduledStartTime is a java.util.Calendar instance
ppr.setScheduledStartTime(scheduledStartTime);

// Save the PackagePushRequest
SaveResult[] saveResults = conn.create(new SObject[] { ppr });
if (saveResults[0].isSuccess()) {
    // Add the newly generated Id to the object
    ppr.setId(saveResults[0].getId());
} else {
    for (Error error : saveResults[0].getErrors()) {
        System.out.println(error.getMessage());
    }
}
```

Or, if you're using REST API, submit a POST request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

This example returns the push request ID (starting with ODV) that's required to create push jobs.

```
POST
/services/data/v38.0/subjects/packagepushrequest/
{
  "PackageVersionId" : "04t...",
  "ScheduledStartTime" : "2016-08-24T21:00:00"
}
```

As your next step, create a push job for each eligible subscriber you want to upgrade using PackagePushJob.

### Scheduling the Push Upgrade

To signal that the push upgrade is ready to be processed, change the status of the push request to Pending. If you didn't set a ScheduledStartTime, the push upgrade starts immediately after you change the status.

See the following Java example.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Pending");
conn.update(new SObject[] { ppr });
```

If you're using REST API, submit a PATCH request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

```
PATCH
/services/data/v38.0/subjects/packagepushrequest/ODV...
{
  "Status" : "Pending"
}
```

### Checking the Status of a Push Request

The PackagePushRequest status is Succeeded if all its associated jobs are successful; it's Failed if at least one job failed.

```
// Finds the status of the PackagePushRequest for a given Id
final String PACKAGE_PUSH_REQUEST_STATUS_QUERY = "Select status from PackagePushRequest"
+
  " where Id = '%s'";

// ppr is a PackagePushRequest instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_REQUEST_STATUS_QUERY,
  ppr.getId()));

// extract the status from the QueryResult
String status = ((PackagePushRequest) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushRequest instance with the latest status
ppr.setStatus(status);
```

You can also check the status of a job by querying the PackagePushJob's Status field.

### Aborting a Push Request

You can abort a package push request by changing its status to Canceled.

For example, if you're using the REST API, submit a PATCH request to the PackagePushRequest sObject endpoint.

```
PATCH
/services/data/v38.0/subjects/packagepushrequest/ODV...
```

```
{
  "Status" : "Canceled"
}
```

The following example is for Java.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Canceled");
```

You can abort a package push request only if its status is Created or Pending. If the abort succeeds, all associated push jobs are also canceled. If you try to abort when the current PackagePushRequest status is Canceled, Succeeded, Failed, or In Progress, the abort does not occur, and an error message is returned.

## PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed packages developed in the org you're logged in to.

One record is created per installation. For example, if 5 orgs installed 2 packages, 10 records are created.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
InstalledStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> If the package is installed in the org, the value is <code>i</code>.</p>
InstanceName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The instance that hosts the subscriber org.</p>
MetadataPackageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<b>Description</b> The package ID. Package IDs have a prefix of 033. This field is available in API version 49.0 and later.
MetadataPackageVersionId	<b>Type</b> reference <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The 18-character package version ID starting with 04t.
OrgKey	<b>Type</b> string <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The 18-character ID that represents the Salesforce org.
OrgName	<b>Type</b> string <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The name of the org where the package is installed.
OrgStatus	<b>Type</b> picklist <b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort <b>Description</b> Valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Demo</li><li>• Free</li><li>• Inactive</li><li>• Trial</li></ul> Orgs with an OrgStatus of Inactive can't receive push upgrades.
OrgType	<b>Type</b> picklist

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Valid values are:</p> <ul style="list-style-type: none"> <li>• Production</li> <li>• Sandbox</li> </ul>
ParentOrg	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The production org from which a sandbox was created.</p>

## Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package subscriber orgs with a specific package ID	<code>SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE MetadataPackageVersionId = '04t...'</code>
Get all package subscriber orgs that have an installed package created by the org you're logged in to	<code>SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE InstalledStatus = 'i'</code>

### Filter PackageSubscriber Objects by Instance

If you have packages with many subscribers, querying PackageSubscriber objects can take a while. To improve query performance, add filters to your PackageSubscriber queries, such as an InstanceName filter. InstanceName is a field that represents the instance that the subscriber org is hosted on.

1. Get the org's managed package and the latest released version of the package.

```
/**
 * Get the MetadataPackage object corresponding to this org's managed package
 */
public MetadataPackage getMetadataPackage() throws ConnectionException {
    // retrieve the managed package, which won't have an empty namespace
    QueryResult result = conn.query("select id from MetadataPackage where namespaceprefix
<> ''");

    return (MetadataPackage) result.getRecords()[0];
}
```

```

/**
 * Get the latest MetadataPackageVersion object of the given MetadataPackage
 */
public MetadataPackageVersion getLatestMetadataPackageVersion(MetadataPackage
metadataPackage)
throws ConnectionException {
    // get the latest released version of the given package
    String query = "Select id, ReleaseState, MajorVersion, MinorVersion, PatchVersion,
MetadataPackageId"
    + " From MetadataPackageVersion"
    + " Where MetadataPackageId = '%s' and ReleaseState = 'Released'"
    + " Order by majorversion desc, minorversion desc, patchversion desc";

    QueryResult result = conn.query(String.format(query, metadataPackage.getId()));

    return (MetadataPackageVersion) result.getRecords()[0];
}

```

2. Get eligible subscribers. The following query strings and methods are modified to allow querying for PackageSubscribers filtered by an instance.

```

static final String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from
PackageSubscribers where OrgStatus = 'Active'"
+ " and InstalledStatus = 'I'"
+ " and InstanceName = '%s'"; // placeholder for instance values

static final String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState,
(%)s) from MetadataPackageVersion"
+ " where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
+ " AND (MajorVersion < %s OR (MajorVersion = %s and MinorVersion < %s))"
+ " OR (MajorVersion = %s and MinorVersion = %s and PatchVersion < %s)";

/**
 * Get all PackageSubscribers on the given instance that are eligible to upgrade to the
 * given
 * MetadataPackageVersion
 */
public PackageSubscriber[] getEligibleSubscriberIds(MetadataPackageVersion version,
String instanceName) throws ConnectionException {
    String allPackageId = version.getMetadataPackageId();
    Integer major = version.getMajorVersion();
    Integer minor = version.getMinorVersion();
    Integer patch = version.getPatchVersion();

    return getEligibleSubscriberIds(major, minor, patch, allPackageId, instanceName);
}

```

```

public PackageSubscriber[] getEligibleSubscriberIds(Integer major, Integer minor, Integer
patch, String packageId, String instanceName) throws ConnectionException {
    String subscriberQuery = String.format(PACKAGE_SUBSCRIBER_ORG_KEY_QUERY, instanceName);
    QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
subscriberQuery, packageId, major, major, minor, major, minor, patch));
}

```

```
return Arrays.stream(results.getRecords()).map(MetadataPackageVersion.class::cast)
    .filter(mpv -> mpv.getPackageSubscribers() != null)
    .flatMap(mpv -> Arrays.stream(mpv.getPackageSubscribers().getRecords()))
    .map(PackageSubscriber.class::cast)
    .toArray(PackageSubscriber[]::new);
}
```

- Put it all together. The following code sample shows how to use the previous methods to modify the workflow to perform package pushes by instance.

```
String[] instances = { "NA4" }; // Here we list the instances we would like to push to
MetadataPackage metadataPackage = api.getMetadataPackage();
MetadataPackageVersion version = api.getLatestMetadataPackageVersion(metadataPackage);

// do pushes by instance to avoid API timeouts retrieving PackageSubscribers
for (String instanceName : instances) {
    PackageSubscriber[] eligibleSubscribers = api.getEligibleSubscriberIds(version,
        instanceName);

    // ... proceed with creating PushRequests and PushJobs as before
}
```

## Partner

---

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

Field	Details
AccountFromId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required if <code>OpportunityId</code> is null. ID of the main account in a partner relationship between two accounts. Specifying this field when creating a Partner record creates two AccountPartner records, one for each direction of the relationship. If you specify the <code>OpportunityId</code> field, you can't specify this field as well.</p>

Field	Details
AccountToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the Partner Account related to either an opportunity or an account. You must specify this field when creating an Opportunity Partner or an Account Partner record.</p>
IsPrimary	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Valid for Opportunity Partners only.  Indicates that the account is the primary partner for the opportunity. Only one account can be marked as primary for an opportunity. If you set this field to 1 (<code>true</code>) upon insert of a new opportunity partner, this field is automatically set to 0 (<code>false</code>) for any other primary partners for that opportunity.  Label is <b>Primary</b>.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required if <code>AccountFromId</code> is null. ID of the opportunity in a partner relationship between an account and an opportunity. Specifying this field when creating a record creates an OpportunityPartner record. If you specify the <code>AccountFromId</code> field, you can't also specify this field.</p>
ReversePartnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the account in a partner relationship.</p>
Role	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>UserRole that the account has toward the related opportunity or account, such as consultant or distributor.</p>

## Roles

In the Salesforce user interface, system administrators can set up the valid role values and their corresponding reverse role values in the PartnerRole object. Each account in the relationship is assigned a Role (such as Consultant or Distributor) designating that account's role toward the related account or opportunity.

## Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the OpportunityId field), the API automatically creates an OpportunityPartner record with the corresponding values:

- The value of the Partner field AccountToId maps to the value of the OpportunityPartner field AccountToId.
- The values of the OpportunityId, Role, and IsPrimary fields in both records are the same.
- If you set the IsPrimary value to 1 (true) upon insert of a new OpportunityPartner, the IsPrimary value is automatically set to 0 (false) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

## Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the AccountFromId), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the AccountFromId and "Acme Consulting" as the AccountToId, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the AccountFromId and "Acme Consulting" as the AccountToId.
- The reverse relationship AccountPartner with "Acme Consulting" as the AccountFromId and "Acme, Inc." as the AccountToId.
- The value of the Role field in the reverse relationship AccountPartner is set to the PartnerRole record ReverseRole value associated with the value of the Role field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

# PartnerFundAllocation

---

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

Field Name	Details
Amount	<b>Type</b> currency <b>Properties</b> Create, Filter, Sort, Update <b>Description</b> Total amount of the allocation.
BudgetId	<b>Type</b> reference <b>Properties</b> Create, Filter, Group, Sort, Update <b>Description</b> ID of the partner marketing budget.
ChannelPartnerId	<b>Type</b> reference <b>Properties</b> Create, Filter, Group, Sort, Update <b>Description</b> ID of the channel partner.
Description	<b>Type</b> textarea <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Description of the allocation.
LastReferencedDate	<b>Type</b> dateTime

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the allocation.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The title of the allocation.</p>
TotalApprovedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of approved fund claims.</p>
TotalApprovedFrs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of approved fund requests.</p>

Field Name	Details
TotalReimbursedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of reimbursed fund claims.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [PartnerFundAllocationFeed](#)

Feed tracking is available for the object.

### [PartnerFundAllocationHistory](#)

History is available for tracked fields of the object.

### [PartnerFundAllocationOwnerSharingRule](#)

Sharing rules are available for the object.

### [PartnerFundAllocationShare](#)

Sharing is available for the object.

## PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

## Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()`  
`search()` `update()`, `upsert()`

## Fields

Field Name	Details
AllocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the partner fund allocation.</p>

Field Name	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Amount of the claim.</p>
BudgetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the partner marketing budget.</p>
ChannelPartnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the channel partner.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the fund claim.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the owner of the fund claim.</p>
RequestId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the partner fund request.</p>
Status	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Status of the fund claim. Values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Approved</li> <li>• Rejected</li> <li>• Paid</li> </ul>
Title	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Title of the fund claim.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**PartnerFundClaimFeed**

Feed tracking is available for the object.

**PartnerFundClaimHistory**

History is available for tracked fields of the object.

**PartnerFundClaimOwnerSharingRule**

Sharing rules are available for the object.

**PartnerFundClaimShare**

Sharing is available for the object.

## PartnerFundRequest

---

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

### Supported Calls

`create()`, `delete()` `describeLayout()` `describeSObjects()`  
`getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

### Fields

Field Name	Details
Activity	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Activity that is covered by the funds, for example, a trade show or seminar.</p>
AllocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the partner fund allocation.</p>
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Approved amount of request.</p>

Field Name	Details
BudgetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the partner marketing budget.</p>
ChannelPartnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the channel partner.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the fund request.</p>
DesiredOutcome	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Desired outcome if requested funds are used.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the fund request.</p>
RequestedAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Amount of the fund request.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Status of the fund request. Values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Approved</li> <li>• Rejected</li> </ul>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Title of the fund request.</p>
TotalApprovedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> Total amount of approved fund claims.</p>
TotalReimbursedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of reimbursed fund claims.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### PartnerFundRequestFeed

Feed tracking is available for the object.

### PartnerFundRequestHistory

History is available for tracked fields of the object.

### PartnerFundRequestOwnerSharingRule

Sharing rules are available for the object.

### PartnerFundRequestShare

Sharing is available for the object.

## PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

Field Name	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Total amount of the budget.</p>
ChannelPartnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the channel partner. This field is available in API version 45.0 and later.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the budget.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date when the budget is no longer available.</p>
IsIgnoreValidation	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> When enabled, ignores restrictions related to the child objects connected to the budget. Note that individual totals for allocation amounts, request amounts, and claims amounts cannot exceed the total of their parent budget. Field is default off (false) on create. Once enabled (true), this field cannot be disabled. This field is available in API version 44.0 and later.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>

Field Name	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the budget.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date when the budget becomes available.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Title of the budget.</p>
TotalAllocatedAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total funds allocated to channel partners or as a fund pool.</p>
TotalApprovedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> Total amount of approved fund claims.</p>
TotalApprovedFrs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of approved fund requests.</p>
TotalReimbursedFcs	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total amount of reimbursed fund claims.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of budget. Values are:</p> <ul style="list-style-type: none"> <li>• <b>Co-Operated Budget</b>—Funds accrue based on a percentage of partner sales. The funds are available based on previous activity.</li> <li>• <b>Marketing Funds</b>—Funds are issued to partners in advance of sales. The funds are awarded based on predicted or expected behavior.</li> </ul>

# PartnerNetworkConnection

---

Represents a Salesforce to Salesforce connection between Salesforce organizations.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Account associated with this connection.</p>
ConnectionName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup, Sort</p> <p><b>Description</b> A descriptive name for the connection. Limit: 295 characters.</p>
ConnectionStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the Salesforce to Salesforce connection. The picklist includes the following values:</p> <ul style="list-style-type: none"><li>• Sent</li><li>• Received</li><li>• Pending</li><li>• Accepted</li><li>• Rejected</li><li>• Inactive</li><li>• Disconnecting</li><li>• ConnectionSuspended</li><li>• SubscribeInProgress</li></ul>

Field	Details
	<ul style="list-style-type: none"> <li>• UsersInitialSync</li> <li>• BulkSyncMetadata</li> </ul>
ConnectionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of Salesforce to Salesforce connection. The picklist includes the following values:</p> <ul style="list-style-type: none"> <li>• Standard</li> <li>• Replication</li> </ul> <p>This field is available in API version 30.0 and later.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Contact associated with this connection.</p>
IsSyncAuditFields	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether audit fields are synced between the primary and secondary organization in a replication connection. This field is available in API version 32.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
IsSyncMetadata	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether supported types of metadata are synced from the primary to the secondary organization in a replication connection. This field is available in API version 33.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>

Field	Details
IsSyncUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether users with standard Salesforce user licenses are synced between the primary and secondary organization in a replication connection. This field is available in API version 35.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
PrimaryContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the User associated with this connection.</p>
ReplicationRole	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The role of this Salesforce organization in the replication connection. The picklist includes the following values:</p> <ul style="list-style-type: none"><li>• Primary</li><li>• Secondary</li></ul> <p>This field is available in API version 30.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.</p>
ResponseDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the connection was accepted or rejected.</p>

## Usage

Represents Salesforce to Salesforce standard and replication connections. This object is referenced by all objects that have been shared with other organizations, enabling you to determine which connections shared a record with you. If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkConnection object is not available, and you can't access it via the API.

SEE ALSO:

[PartnerNetworkRecordConnection](#)

## PartnerNetworkRecordConnection

---

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

## Supported Calls

`create()`, `query()`

## Fields

Field	Details
ConnectionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required. ID of the connection a record is shared with.</p>
EndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date that sharing of the record was stopped.</p>
LocalRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the shared record.</p>
ParentRecordId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the parent record of the shared record.</p>
PartnerRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the shared record in the connection's organization.</p>
RelatedRecords	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> A comma-separated list of API names for child records to be shared with a parent record.</p>
SendClosedTasks	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Forwards closed tasks related to the shared record.</p>
SendEmails	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Sends an email notifying the connection's representative that you have forwarded the record to them. Only new recipients of a record will receive a notification email.</p>
SendOpenTasks	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Forwards open tasks related to the shared record.</p>

Field	Details
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date that the shared record was accepted.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status of the shared record. One of the following values:</p> <ul style="list-style-type: none"> <li>• Active (received)</li> <li>• Active (sent)</li> <li>• Connected</li> <li>• Inactive</li> <li>• Inactive (converted)</li> <li>• Inactive (deleted)</li> <li>• Pending (sent)</li> </ul>

## Usage

When you create a PartnerNetworkRecordConnection, you forward a record to a connection.

 **Note:** Attempting to forward a record from an object to which the connection is not subscribed results in an `Invalid Partner Network Status` error.

When you delete a PartnerNetworkRecordConnection, you stop sharing a record with a connection.

- To share a record, use the following fields: `LocalRecordID` and `ConnectionId`
- To share a child of a parent record, use the following fields: `LocalRecordID`, `ConnectionId`, and `ParentRecordID`
- To share a child of a parent record and its child records, use the following fields: `LocalRecordID`, `ConnectionId`, `ParentRecordID`, and `RelatedRecords`

If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkRecordConnection object is not available, and you can't access it using the API.

## Sample Code—Apex

The following example shows how to forward a record.

```
List<PartnerNetworkConnection> connMap = new List<PartnerNetworkConnection>(
    [select Id, ConnectionStatus, ConnectionName from PartnerNetworkConnection
```

```

        where ConnectionStatus = 'Accepted']
    );
    for(PartnerNetworkConnection network : connMap) {
        PartnerNetworkRecordConnection newrecord = new PartnerNetworkRecordConnection();

        newrecord.ConnectionId = network.Id;
        newrecord.LocalRecordId = accountId;
        newrecord.RelatedRecords = 'Contact,Opportunity,Orders__c';
        newrecord.SendClosedTasks = true;
        newrecord.SendOpenTasks = true;
        newrecord.SendEmails = true;

        insert newrecord;
    }

```

The following example shows how to stop sharing a record.

```

List<PartnerNetworkRecordConnection> recordConns = new List<PartnerNetworkRecordConnection>(
    [select Id, Status, ConnectionId, LocalRecordId from PartnerNetworkRecordConnection
     where LocalRecordId in :accounts]
);

for(PartnerNetworkRecordConnection recordConn : recordConns) {
    if(recordConn.Status.equalsignorecase('Sent')){ //account is connected - outbound

        delete recordConn;
    }
}

```

[PartnerNetworkConnection](#)

## PartnerNetworkSyncLog

---

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

### Special Access Rules

The Org Sync Log tab can only be added in organizations where Organization Sync has been enabled. To add the tab to the Salesforce user interface, users must also have the "Manage Connections" user permission.

## Fields

Field Name	Details
ConnectionEvent	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The action being replicated to the partner organization, such as a record insertion.</p>
ConnectionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the Salesforce to Salesforce replication connection in which the replication event succeeded or failed.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> A description of the replication event.</p>
EntityType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The type of record being inserted or updated.</p>
Error	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The code used to describe the replication failure or success.</p>
LocalRecord	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The record being inserted or updated.</p>
Status	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>An item is added to the Organization Sync Log if it failed to be replicated to the linked organization. This picklist includes the following values:</p> <ul style="list-style-type: none"> <li><b>Failed:</b> The replication continued to fail after multiple retries, and won't be retried further.</li> <li><b>Resolved:</b> The replication succeeded after retrying.</li> <li><b>Retrying:</b> Salesforce is retrying the replication.</li> </ul> <p>This field is available in API version 35.0 and later.</p>

## PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

Field	Details
ApiName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, idLookup, Sort</p> <p><b>Description</b></p> <p>Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>

Field	Details
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this partner role value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
ReverseRole	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the reverse role that corresponds to this partner role. For example, if the role is “subcontractor,” then the reverse role might be “general contractor.” In the user interface, assigning a partner role to an account creates a reverse partner relationship so that both accounts list the other as a partner.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number used to sort this value in the partner role picklist. These numbers are not guaranteed to be sequential, as some previous partner role values might have been deleted.</p>

## Usage

This object represents a value in the partner role picklist. In the user interface, the partner role picklist provides additional information about the role of a Partner, such as their corresponding reverse role. Query this object to retrieve the set of values in the partner role picklist, and then use that information while processing PartnerRole records to determine more information about a given partner role. For example, the application could determine the reverse role of a given Partner Role value and the value of the ReverseRole property in the associated PartnerRole object.

[Object Basics](#)

## PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Action	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The action that the Individual is consenting to.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• CrossDevice</li> <li>• DataCollection</li> <li>• Reidentification</li> <li>• Segment</li> <li>• ShareData</li> <li>• Target</li> </ul>
CaptureContactPointType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. Indicates how you captured consent.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Email</li> <li>• MailingAddress</li> <li>• Phone</li> <li>• Social</li> <li>• Web</li> </ul>
CaptureDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Required. Date when consent was captured.</p>

Field	Details
CaptureSource	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. Indicates how you captured consent. For example, a website or online form.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the party consent record.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the account owner associated with this customer.</p>
PartyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Required. Represents the record based on the Individual object you want to associate consent with.</p>
PrivacyConsentStatus	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Required. Identifies whether the individual associated with this record agrees to this form of contact.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• NotSeen</li> <li>• OptIn</li> <li>• OptOut</li> <li>• Seen</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### PartyConsentFeed

Feed tracking is available for the object.

### PartyConsentHistory

History is available for tracked fields of the object.

### PartyConsentOwnerSharingRule

Sharing rules are available for the object.

### PartyConsentShare

Sharing is available for the object.

## Payment

Represents a single event where the customer creates a payment. For credit cards, this is a payment capture or payment sale, which won't show up in the end user's credit card statement. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The account of the customer who made the payment.</p>
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The amount to be debited or captured.</p>
Balance	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount – the net applied amount.</p>
CancellationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date that the payment was voided.</p>
CancellationEffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the cancellation of this payment takes effect.</p>

Field	Details
CancellationGatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The gateway provides this date following a successful cancellation request.</p>
CancellationGatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> System-provided unique transaction ID from the payment gateway.</p>
CancellationGatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
CancellationSfResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A Salesforce result code that can be mapped to one or more gateway result codes. We recommend that the payment gateway adapter layer maps gateway-specific codes to the Salesforce result code.</p>
ClientContext	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Users can provide additional details about the payment record. Supports a maximum of 1000 characters.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Three-letter ISO 4217 currency code associated with the payment group record.</p>
Date	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when this payment record was created.</p>
EffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date that this payment takes effect.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Email address of the user who initiated the payment.</p>
GatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The gateway provides this date for reference following a successful gateway communication.</p>
GatewayRefDetails	<p><b>Type</b> textarea</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.</p>
GatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unique transaction ID created by the payment gateway.</p>
GatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code that must map to a Salesforce-specific result code. One Salesforce result code can map to multiple gateway result codes.</p>
GatewayResultCodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the gateway's result code.</p>
ImpactAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Shows the payment's financial impact against the customer's accounts receivable. If the payment is valid, this value is the negative of the payment amount. If the payment is voided, this value is 0.</p>
IpAddress	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The IP address of the user who initiated the payment.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MacAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The MAC address of the user who initiated the payment.</p>
NetApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total payment amount of that has been applied, including adjustments.</p>
NetRefundApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total refund amount that has been applied to the payment, including adjustments.</p>

Field	Details
OrderPaymentSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Order payment summaries show the balances of each authorization, capture, and refund made against an order.</p>
PaymentAuthorizationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The authorization record for this payment. If there is a delayed capture (when the capture occurs after the authorization), all captures must be made against a previously successful authorization transaction.</p>
PaymentGatewayId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the payment gateway that processed the payment. Populated from the authorization record if there is delayed payment.</p>
PaymentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment.</p>
PaymentMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The payment method that the customer used to provide this payment information.</p>

Field	Details
PaymentNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-created unique ID for this payment record.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Phone number of the customer who initiated the payment.</p>
ProcessingMode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether the payment has been made outside of the payment platform. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>External</b>: Transactions happened outside of the Salesforce payments platform.</li> <li>• <b>Salesforce</b>: Salesforce made and recorded an external call to the payment gateway.</li> </ul>
SfResultCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Decline</b>: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.</li> <li>• <b>Indeterminate</b>: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.</li> <li>• <b>PermanentFail</b>: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> <li>– <b>Hard Decline</b>: The customer's payment account has been closed or terminated.</li> <li>– <b>Fraud</b>: The gateway recognized the payment or payment method as known fraud.</li> </ul> </li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <b>RequiresReview:</b> The customer bank requires more information before completing the payment.</li> <li>• <b>Success:</b> The gateway call succeeded.</li> <li>• <b>SystemError:</b> Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.</li> <li>• <b>ValidationError:</b> Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.</li> </ul>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines the state of this payment. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Canceled:</b> This payment has been unapplied from its target and can no longer be allocated.</li> <li>• <b>Draft:</b> The payment can be edited before posting it and allocating it to a target.</li> <li>• <b>Processed:</b> This payment has been finalized and can be allocated against a target.</li> </ul> <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> <li>• Draft to Processed</li> <li>• Processed to Canceled</li> <li>• Draft to Canceled</li> </ul>
TotalApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of this payment's balance that has been applied against an invoice.</p>
TotalRefundApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of a refund that has been applied against this payment.</p>
TotalRefundUnapplied	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of a previously applied refund that has since been unapplied from this payment.</p>
TotalUnapplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total amount of this payment that was previously applied and then unapplied.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines how the customer used this payment. Possible values are:</p> <ul style="list-style-type: none"> <li>• Capture</li> <li>• Sale</li> </ul>

## PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

A common type of payment authorization occurs when a user sees a pending transaction against their credit card account.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Customer account.</p>
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The amount authorized for the payment event.</p>
Balance	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total authorized amount – any payment authorization reversals – any payment captures. Can be positive or negative.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Users can enter comments to provide additional details about the authorization.</p>
Date	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> By default, the day the authorization record was created. Users can also enter a different date. Editable only when the payment authorization's status is Draft.</p>
EffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date on which the authorization takes effect. Editable only when the payment authorization's status is Draft.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
ExpirationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Authorizations can't be captured after their expiration dates.</p>
GatewayAuthCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Authorization approval code from the payment gateway.</p>
GatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Payment authorization approval code from the payment gateway.</p>
GatewayRefDetails	<p><b>Type</b> textarea</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.</p>
GatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unique transaction ID from the payment gateway.</p>
GatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
GatewayResultCodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.</p>
IpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MacAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
OrderPaymentSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Order payment summaries show the balances of each authorization, capture, and refund made against an order.</p>
PaymentAuthorizationNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-provided unique ID for a payment authorization record.</p>
PaymentGatewayId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Salesforce payment gateway record that created this authorization. This gateway will be used for subsequent captures.</p>

Field	Details
PaymentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment.</p>
PaymentMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer payment method provided during this authorization.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
ProcessingMode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether the payment has been made outside of the payment platform. Possible values are:</p> <ul style="list-style-type: none"><li>• <code>External</code>: Transactions happened outside of the Salesforce payments platform.</li><li>• <code>Salesforce</code>: Salesforce made and recorded an external call to the payment gateway.</li></ul>
SfResultCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Decline</b>: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.</li> <li>• <b>Indeterminate</b>: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.</li> <li>• <b>PermanentFail</b>: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> <li>– <b>Hard Decline</b>: The customer's payment account has been closed or terminated.</li> <li>– <b>Fraud</b>: The gateway recognized the payment or payment method as known fraud.</li> </ul> </li> <li>• <b>RequiresReview</b>: The customer bank requires more information before completing the payment.</li> <li>• <b>Success</b>: The gateway call succeeded.</li> <li>• <b>SystemError</b>: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.</li> <li>• <b>ValidationError</b>: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.</li> </ul>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines the state of this payment.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Cancelled</b>: This payment has been unapplied from its target and can no longer be allocated.</li> <li>• <b>Draft</b>: The payment can be edited before posting it and allocating it to a target.</li> <li>• <b>Processed</b>: This payment has been finalized and can be allocated against a target.</li> </ul> <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> <li>• Draft to Processed</li> <li>• Processed to Canceled</li> <li>• Draft to Canceled</li> </ul>
TotalPaymentCaptureAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The sum of all authorization captures related to this payment authorization.</p>

## PaymentGateway

Platform entity that represents the connection to the external payment gateway. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

### Fields

Field	Details
Comments	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
ExternalReference	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Allows Order Management Services to map an Order Management gateway to a Payments Platform gateway. This field is unique within your organization.</p>

Field	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MerchantCredentialId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Looks up to the merchant credential setup entity to reference merchant information.</p>
PaymentGatewayName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> User-defined name for the payment gateway.</p>
PaymentGatewayProviderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Looks up to the payment gateway provider, which captures common details and configurations for payment gateways.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Defines whether the Payments Platform can use this payment gateway for calls to the external payment gateway. Inactive payment gateways can't be used.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

## PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

Deleting or archiving a payment gateway log doesn't impact financial data on other payment entities.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
GatewayAuthCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Authorization approval code from the gateway.</p>
GatewayAvsCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Code sent by gateways that use an address verification system.</p>

Field	Details
GatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time that of the gateway communication that lead to the creation of this gateway log.</p>
GatewayMessage	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Information or error messages sent from the gateway.</p>
GatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unique transaction ID created by the payment gateway.</p>
GatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
GatewayResultCodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.</p>
InteractionStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Describes the result of communication between the payments platform and a payment gateway.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>Failed</li> <li>Success</li> <li>Timeout</li> </ul>
InteractionType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Describes the type of interaction with the gateway. This field is required for logs created in Salesforce.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>Authorization</li> <li>Avs</li> <li>Capture</li> <li>CheckGiftCardBalance</li> <li>ReferencedRefund</li> <li>Sale</li> <li>Void</li> </ul>
OrderPaymentSummaryId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Order payment summaries show the balances of each authorization, capture, and refund made against an order.</p>
PaymentGatewayId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The Payments Platform payment gateway record used for communication with the external payment gateway.</p>

Field	Details
PaymentGatewayLogNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-generated unique ID for this payment gateway log record.</p>
ReferencedEntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Foreign key with DomainSet of PaymentAuth and Payment.</p>
Request	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Raw payload. No sensitive attributes are stored.</p>
Response	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Raw payload.</p>
SfRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> If an IdempotencyKey was passed in the API request, its value is stored here in text format.</p>
SfResultCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

**Field****Details****Description**

Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.

Possible values are:

- **Decline**: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.
- **Indeterminate**: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.
- **PermanentFail**: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons:
  - **Hard Decline**: The customer's payment account has been closed or terminated.
  - **Fraud**: The gateway recognized the payment or payment method as known fraud.
- **RequiresReview**: The customer bank requires more information before completing the payment.
- **Success**: The gateway call succeeded.
- **SystemError**: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.
- **ValidationError**: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.

## PaymentGatewayProvider

---

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
ApexAdapterId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Apex adapter reference for your payment gateway. This field is unique within your organization.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> (Optional) The username of the developer who configured the payment gateway. For reference only.</p>
IdempotencySupported	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines whether the Payments Platform will charge the customer/merchant's card multiple times for the same transaction if the same request is made in rapid succession. This can occur when a user clicks a Pay button twice, or if the gateway's server goes down after fulfilling a payment request and the client immediately tries making another payment. If this field has a value of Yes, the Payments Platform ignores identical payment requests made immediately after an original request.</p> <p>Different payment gateways have varying levels of idempotency support. When configuring a new payment gateway integration, plan accordingly.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Customer language used for the payment gateway.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Specifies the name of the payment gateway provider.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Namespace for the payment gateway platform.</p>

## PaymentGroup

---

Top-level object that groups of all the payment transactions that have been processed an order or contract. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
PaymentGroupNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-defined unique ID for the payment group.</p>
SourceObjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The order or invoice related to all the payment transactions in the payment group.</p>

## PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

## Fields

Field	Details
Amount	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> Total amount applied or unapplied by this payment line.</p>
AppliedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The date that this line was applied to an invoice or payment. If this field is null, it inherits the value of the payment line invoice's Date field.</p>
AssociatedAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The account for this payment line's target invoice.</p>
AssociatedPaymentLineId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The paymentLine that was unapplied. Populated only when PaymentLineInvoice's Type field has a value of Unapplied.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
Date	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that this payment line was created.</p>

Field	Details
EffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> Defines the date and time when the payment line application or unapplication becomes effective.</p>
EffectiveImpactAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Shows how this payment invoice line impacts a customer's accounts receivable. This value is positive when PaymentLineInvoice's Type field is Applied, and negative when PaymentLineInvoice's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0.</p> <p> <b>Note:</b> EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same payment.</p>
HasBeenUnapplied	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether this payment line has been unapplied from the target invoice. Has a value of NA when PaymentInvoiceLine's Type field has a value of Unapplied. Can be No or Yes if Type has a value of Applied.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• NA</li> <li>• No</li> <li>• Yes</li> </ul>
ImpactAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Shows the payment's financial impact against the customer's accounts receivable. If PaymentLineInvoice has a Type of Applied, the ImpactAmount is the negative equivalent of the line's Amount field. Otherwise, ImpactAmount equals Amount.</p>

Field	Details
InvoiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Target invoice for this payment line.</p>
PaymentBalance	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total balance of this line's parent payment record following the application or unapplication of this payment line.</p>
PaymentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Parent payment for this payment line.</p>
PaymentLineInvoiceNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-defined unique ID for this payment line.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether this payment line has been applied or unapplied to the target invoice. Possible values are:</p> <ul style="list-style-type: none"> <li>• Applied</li> <li>• Unapplied</li> </ul>
UnappliedDate	<p><b>Type</b> dateTime</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The date that this payment line was unapplied from the target invoice. Populated only when the Type field equals Unapplied. Inherits the value of the Date field.</p>

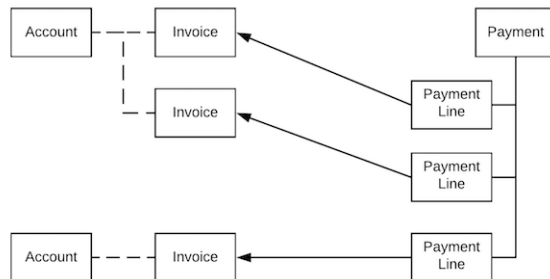

## Usage

Use a payment line to apply all or part of a payment's balance to an invoice. The PaymentLineInvoice object represents the balance taken from the payment and applied toward the invoice. You can apply a payment's balance when you create the payment record or afterward. The payment line must have the same currency as the parent payment.

A payment line has an amount, which represents the total amount taken from the payment, and balance, which represents the remaining amount after the payment line has been applied to an invoice. A payment's amount can't be less than the sum of all of its payment line amounts.

One payment can have multiple payment lines. A payment line must be related to only payment.

You can create multiple payment lines on a payment apply each line to different invoices on the same account, or to invoices on different accounts.

Here's one way you could use Salesforce API to apply a payment to an invoice using a payment line.

## PaymentMethod

The method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The account entity linked to this payment method.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
CompanyName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Company name for this payment method. Part of the payment method's address.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Unique number assigned to the payment method. Numbers start at 1000 and are read only, but administrators can change the format.</p>
NickName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> User-defined nickname for this payment method.</p>
PaymentMethodAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Uses address column type. First name and last name are listed as separate fields.</p>
PaymentMethodCity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodState	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
PaymentMethodStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Part of the address for this payment method.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The state of the payment method. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>: The Payments Platform can use the payment method to make payments.</li> <li>• <b>Cancelled</b>: The Payments Platform can no longer use the payment method to make payments.</li> <li>• <b>InActive</b>: The Payments Platform currently can't use the payment method to make payments. Admins can change this value to Active when needed.</li> </ul>

## PendingServiceRouting

Represents a work assignment that's waiting to be routed. This object is available in API version 40.0 and later.

## Supported Calls

`query()`, `getDeleted()`, `getUpdated()`, `retrieve()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
CapacityPercentage	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the amount of work that this item represents as a percentage. Valid values are 0–100.</p>
CapacityWeight	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the amount of work that this work item represents as a whole number.</p>
CustomRequestedDatetime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> Retains the datetime of a work item's initial request, so work items are rerouted using the datetime of the initial work request. When left blank, work items are rerouted using the datetime when they were rerouted.</p>
DropAdditionalSkillsTimeout	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The period of time to wait before a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Omni-Channel queue.</p>
IsPushAttempted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a push has been attempted. <code>true</code> if an agent was chosen at least once to route this <code>PendingServiceRouting</code>; <code>false</code> otherwise.</p>
IsPushed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the <code>PendingServiceRouting</code> is pushed to an agent.</p>
IsReadyforRouting	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the work item is ready to be routed to an agent. You can't edit a <code>PendingServiceRouting</code> object that is set to <code>True</code>.</p>
IsTransfer	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this <code>PendingServiceRouting</code> is a transfer request.</p>

Field	Details
LastDeclinedAgentSession	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Chat Session ID of the agent who last declined this work item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p> <p><b>Description</b> Name of the PendingServiceRouting.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the owner of this PendingServiceRouting.</p>
PreferredUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create. Filter, Group, Nillable, Sort, Update.</p> <p><b>Description</b> The ID of the preferred user to handle the work.</p>
QueueId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Omni-Channel queue. Due to API changes, QueueId is no longer recommended. Use <a href="#">GroupId</a> instead.</p>
RoutingModel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Type of routing model. For a queue configured with a queue routing configuration, the routing model is <code>ExternalRouting</code> for all external routing <code>PendingServiceRouting</code>.</p>
<code>RoutingPriority</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The order in which work items are routed to agents.</p>
<code>RoutingType</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Indicates whether the work item is routed by queue or by skills-based routing. Valid values are <code>QueueBased</code> and <code>SkillsBased</code>.</p>
<code>SecondaryRoutingPriority</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Indicates the secondary routing priority.</p>
<code>Serial</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Serial number of the <code>PendingServiceRouting</code>. The serial number is automatically incremented each time the <code>PendingServiceRouting</code> is modified.</p>
<code>ServiceChannelId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the Service Channel.</p>

Field	Details
WorkItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the work item.</p>

## Usage

When you use `PendingServiceRouting` objects for queue-based routing, the `PendingServiceRouting` objects don't invoke triggers before or after insert, or any action (trigger, workflow rule, validation) that could interfere with the creation of the `PendingServiceRouting` object.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [PendingServiceRoutingOwnerSharingRule](#)

Sharing rules are available for the object.

### [PendingServiceRoutingShare](#)

Sharing is available for the object.

## Period

Represents a fiscal period defined in `FiscalYearSettings`.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only Chatter Free users and standard users can access this object.

## Fields

Field	Details
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> The last date of the fiscal period.</p>
FiscalYearSettingsId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable, Group, Sort</p> <p><b>Description</b> The parent record for this period.</p>
FullyQualifiedLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable</p> <p><b>Description</b> Represents the period's complete name in the UI. For example, "September FY 2016".</p>
IsForecastPeriod	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the period is associated with Collaborative Forecasts (<code>true</code>) or not (<code>false</code>).</p>
Number	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Group, Sort</p> <p><b>Description</b> If the labeling scheme of your fiscal year's quarters or months is numbered, this field indicates the relative number of the row.</p>
PeriodLabel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the months in your fiscal year use custom names, then this field contains the appropriate name for rows of type Month.</p>

Field	Details
QuarterLabel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the quarters in your fiscal year use custom names, then this field contains the appropriate name for rows of type Quarter.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The first date of the fiscal period.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Indicates whether the period is of type Month, Quarter, Week, or Year. Label is the field value.</p>

## Usage

In API version 36.0 and earlier, querying the Period object yields no results. In API version 37.0 and later, a query returns period records.

SEE ALSO:

[FiscalYearSettings](#)

## PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

You can use permission sets to grant access, but not to deny access.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Child Relationships

PermissionSet has a read-only child relationship with PermissionSetGroup. PermissionSet contains the aggregated permissions for the group.

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets
- Manage Profiles and Permission Sets

To view the following settings, assignments, and permissions for standard and custom objects in a specified permission set, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

## Fields

Field Name	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Sort, Update</p> <p><b>Description</b> A description of the permission set. Limit: 255 characters.</p>
HasActivationRequired	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the permission set requires an associated active session (<code>true</code>) or not (<code>false</code>).</p>
IsCustom	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the permission set is custom (created by an admin); if <code>false</code>, the permission set is standard and related to a specific permission set license.</p>
IsOwnedByProfile	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the permission set is owned by a profile. Available in API version 25.0 and later.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The permission set label, which corresponds to <b>Label</b> in the user interface. Limit: 80 characters.</p>
LicenseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of either the related PermissionSetLicense or UserLicense associated with this permission set. Available in API version 38.0 and later. Use this field instead of <code>UserLicenseId</code>, which is deprecated and only available up to API Version 37.0.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Corresponds to <b>API Name</b> in the user interface. Limit: 80 characters.</p>
NamespacePrefix	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix for a permission set that's been installed as part of a managed package. If the permission set isn't packaged or is part of an unmanaged package, this value is empty. Available in API version 23.0 and later.</p>
PermissionsPermissionName	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> One field for each permission. If <code>true</code>, users assigned to this permission set have the named permission. The number of fields varies depending on the permissions for the organization and license type.</p> <p> <b>Tip:</b> To get a list of available permissions in the SOAP API, use <code>describeSObjects()</code>.</p>
PermissionSetGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the permission set is owned by a permission set group, this field returns the ID of the permission set group. If the permission set isn't owned by a permission set group, this field returns a null value. Available in API version 45.0 and later.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the permission set is owned by a profile, this field returns the ID of the Profile. If the permission set isn't owned by a profile, this field returns a null value. Available in API version 25.0 and later.</p>
Type	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Available in API version 46.0 and later.</p>

Field Name	Details
UserLicenseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the UserLicense associated with this permission set. This field is nillable in API version 26.0 and later and available up to API version 37.0 In API version 38.0 and later, use <code>LicenseId</code>.</p>

## Usage

Use the PermissionSet object to query existing permission sets.

For example, to search for all permission sets that contain the “Modify All Data” permission:

```
SELECT Name, PermissionsModifyAllData
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

When combined with the PermissionSetAssignment object, you can create a nested query that returns all users assigned to a particular permission like “Modify All Data”:

```
SELECT Name, (SELECT AssigneeId FROM Assignments)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

If the permission set isn’t assigned to a user, you can also create or delete a permission set.

## User Licenses

The user license controls the permissions that are available in a permission set.

Every permission set can be associated with a user license or permission set license. If you plan to assign a permission set to multiple users with different user and permission set licenses, leave `LicenseId` empty. If only users with one type of license use this permission set, set the `LicenseId` to that single user or permission set license. If you want a permission set associated with a permission set license, then set `LicenseId` to the permission set license. To get the `LicenseId`, run this query:

```
SELECT Id, Name
FROM UserLicense
```

Alternatively, to query a user or profile for the `LicenseId`.

```
SELECT Id, Profile.UserLicenseId
FROM User
```

## Child Objects

When using the API, think of each permission set or related set of access controls as an empty container that you fill with permission records.

In the API, a permission set can contain user, object, and field permissions, and setup entity access settings for other settings, such as Apex classes.

- ObjectPermissions and FieldPermissions objects are available in API version 24.0 and later.
- The SetupEntityAccess object is available in API version 25.0 and later.
- The PermissionSetGroupComponent object is available in API version 45 and later.

Only user permissions are managed in the PermissionSet API object; all other permission types are managed in child API objects.

In these child objects, access is stored in a record, while the absence of a record indicates no access. To return a record in a SOQL query, a minimum permission or setting is required for each child object.

Because permissions are stored in related objects, it's important to understand what questions to ask when using SOQL. For example, let's say you want to know which permission sets have "Delete" on an object. You also want to know which ones include permissions that allow approval of a return merchandise authorization (where the approval checkbox is controlled with field permissions). Asking the right questions when using SOQL with permission sets ensures that you get the information you need, such as whether to migrate permissions or assign a permission set to a user.

For example, the following returns all permission sets where the "Read" permission is enabled for the Merchandise\_\_c object.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = True AND SubjectType = 'Merchandise__c'
```

You can query for all permission sets that have "Read" on an object. However, you can't query for permission sets that have no access on an object, because no records exist for that object. For example, the following returns no records because the object must have at least "Read" to return any records.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = False AND SubjectType = 'Merchandise__c'
```

If you have at least the "Read" permission on an object, you can create a conditional query on other permissions in the same object. For example, the following returns any records where the object has at least the "Read" permission but not the "Edit" permission.

```
SELECT ParentId, PermissionsRead, PermissionsEdit
FROM ObjectPermissions
WHERE PermissionsEdit = False AND SubjectType = 'Merchandise__c'
```

To set an object or field permission to no access, delete the record that contains the permission. For example, to disable all object permissions in the Merchandise\_\_c object for a particular permission set, first query to retrieve the ID of the object permission record.

```
SELECT Id
FROM ObjectPermissions
WHERE SubjectType = 'Merchandise__c'
```

Then delete the IDs returned from the query.

-  **Note:** If you try to update the object or field permissions by setting all permissions to false, the permission record is automatically deleted. Any subsequent queries for the record ID won't return results and you must add a new permission record to grant access.

## View a Permission Set with Nested Queries

You can build on the PermissionSet object using child relationships that show all of the permissions in a single permission set. For example, the following returns all permission sets and displays the “Transfer Leads” permission, as well as any “Read” permissions on any objects and fields.

```
SELECT Label, PermissionsTransferAnyLead,
(SELECT SubjectType, PermissionsRead FROM ObjectPerms),
(SELECT SubjectType, Field, PermissionsRead FROM FieldPerms)
FROM PermissionSet
```

## Associated Profiles

In API version 25.0 and later, every profile is associated with a permission set that stores the profile’s user, object, and field permissions, as well as setup entity access settings. You can query permission sets that are owned by profiles but not modify them.

The following example returns all permission sets, including those owned by a profile.

```
SELECT Id, Label, ProfileId, Profile.Name
FROM PermissionSet
```

The following returns all permission sets except those permissions owned by profiles.

```
SELECT Id, Label, ProfileId, Profile.Name, IsOwnedByProfile
FROM PermissionSet
WHERE IsOwnedByProfile = FALSE
```

Because permission sets have child objects in the API, you can query their values on permission sets owned by a profile. For example, the following returns all enabled object permission records for profiles only.

```
SELECT Id, ParentId, PermissionsRead, SubjectType, Parent.ProfileId
FROM ObjectPermissions
WHERE Parent.IsOwnedByProfile = TRUE
```

Once you have the IDs for permission sets that are owned and not owned by profiles, use the [PermissionSetAssignment](#) object to see if users can access objects or fields via their profile permissions or their permission sets. For example, the following SOQL query returns all users who have the “Read” permission on the Merchandise\_\_c object. It also specifies whether the permission is granted through a profile or permission set.

```
SELECT Assignee.Name, PermissionSet.Id, PermissionSet.isOwnedByProfile
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
FROM ObjectPermissions
WHERE SObjectType = 'Merchandise__c' AND PermissionsRead = true)
```

 **Note:** For permission sets that are owned by profiles, don't use Name and Label values that are returned in a query. Name and Label values from queries can change.

## PermissionSetAssignment

---

Represents the association between a User and a PermissionSet. This object is available in API version 22.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

### Fields

Field Name	Details
AssigneeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the User to assign the permission set specified in <code>PermissionSetId</code>.</p>
PermissionSetGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>If associated with a permission set group, this is the ID of that group. This field is available in API version 45.0 and later as part of a pilot. Refer to <a href="#">PermissionSetGroup</a> for more information.</p>
PermissionSetId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>ID of the PermissionSet to assign to the user specified in <code>AssigneeId</code>.</p>

## Usage

### Finding Permission Set Assignments

Use the `PermissionSetAssignment` object to query permission set assignments to find out which permission sets are assigned to which users. Because each user can be assigned to many permission sets and each permission set can be assigned to many users, each `PermissionSetAssignment` ID represents the association of a single user and single permission set.

For example, to search for all permission sets assigned to a particular user:

```
SELECT Id, PermissionSetId
FROM PermissionSetAssignment
WHERE AssigneeId = '005600000017cKt'
```

To search for all users assigned to a particular permission set:

```
SELECT Id, AssigneeId
FROM PermissionSetAssignment
WHERE PermissionSetId = '0PS30000000000e'
```

You can also create a new permission set assignment, or use `delete` to remove a permission set that's assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

### User Licenses

When assigning a permission set, if the `PermissionSet` has a `UserLicenseId`, its `UserLicenseId` and the Profile `UserLicenseId` must match. To determine a user's license assignment, query the user's profile and then query the profile's license.

For example, to find a user's profile ID:

```
SELECT Id, ProfileId
FROM User
WHERE Id = '005D0000001GMAT'
```

To find a permission set's `UserLicenseId`:

```
SELECT Id, LicenseId
FROM PermissionSet
WHERE Id = '0PS30000000000e'
```

If the IDs match, the assignment succeeds.

To find all the permission sets with no license that are assigned to any user:

```
SELECT Id, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE PermissionSet.LicenseId = null
```

SEE ALSO:

[PermissionSet](#)

## PermissionSetGroup

---

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObject()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

### Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Permission Set Group description.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The permission set group name used in the API.</p>

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The Permission Set Group language. Possible values are:</p> <ul style="list-style-type: none"> <li>• da (Danish)</li> <li>• de (German)</li> <li>• en_US (English)</li> <li>• es (Spanish)</li> <li>• es_MX (Spanish - Mexican)</li> <li>• fi (Finnish)</li> <li>• fr (French)</li> <li>• it (Italian)</li> <li>• ja (Japanese)</li> <li>• ko (Korean)</li> <li>• nl_NL (Dutch)</li> <li>• no (Norwegian)</li> <li>• pt_BR (Portuguese - Brazilian)</li> <li>• ru (Russian)</li> <li>• sv (Swedish)</li> <li>• th (Thai)</li> <li>• zh_CN (Chinese - Simplified)</li> <li>• zh_TW (Chinese - Traditional)</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The permission set group label for the aggregated permissions.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The permission set group namespace prefix.</p>

Field Name	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates permission set group recalculation status.</p> <ul style="list-style-type: none"> <li>• <code>Updated</code>. The group is current.</li> <li>• <code>Outdated</code>. The group requires recalculation.</li> <li>• <code>Updating</code>. The group is in recalculation mode.</li> <li>• <code>Failed</code>. The group recalculation failed.</li> </ul>

## Usage

Use the `PermissionSetGroup` object to query existing permission set groups and to find which aggregated permissions are included in the group.

For example, to search for all object permissions in a permission set group named `StandardAccountingUsers`:

```
SELECT SObjectType
FROM ObjectPermissions
WHERE Parent.PermissionSetGroup.DeveloperName = 'StandardAccountingUsers'
```

To create a permission set group using REST API, you can submit a POST request.

```
POST
/services/data/v45.0/tooling/objects/PermissionSetGroup/

{
  "DeveloperName": "Sales", "MasterLabel": "sales_label"
}
```

## PermissionSetGroupComponent

A junction object that relates the `PermissionSetGroup` and `PermissionSet` objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObject()`, `query()`, `retrieve()`

### Child Relationships

`PermissionSetGroupComponent` is a child object of `PermissionSet` and `PermissionSetGroup`.

## Special Access Rules

As of Spring '20 and later, only users with the "View Setup and Configuration" permission can access this object.

## Fields

Field Name	Details
PermissionSetGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique permission set group ID.</p>
PermissionSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique permission set ID of a permission set in a permission set group.</p>

## Usage

Use the PermissionSetGroupComponent object to add members to or delete members from a permission set group, or to query for group members.

## PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
DeveloperName	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
ExpirationDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date at which the permission set license expires.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language of the permission set license.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The label of the permission set license. Label is <b>Permission Set License Label</b>.</p>
MaximumPermissions <i>PermissionName</i>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter,</p> <p><b>Description</b> One field for each permission. For example, <code>MaximumPermissionsIdentityConnect</code> corresponds to the “Use Identity Connect” permission.</p>

Field Name	Details
	If <i>true</i> , this PermissionSetLicense grants the specified permission. The number of fields varies depending on the permissions available for the organization.
MaximumPermissionsShowCompanyNameAsUserBadge	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When on, a user's company name, if available, will be displayed in place of the community role.</p>
PermissionSetLicenseKey	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> A string that uniquely identifies a particular permission set license.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of a permission set license. If <i>Active</i>, the permission set license is available. If <i>Disabled</i>, the permission set license has expired.</p>
TotalLicenses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The total number of this permission set license that are available to your organization.</p>
UsedLicenses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of this permission set license that are currently assigned to users.</p>

## Usage

Users with the “View Setup and Configuration” permission can use the PermissionSetLicense object to view the set of currently defined permission set licenses in your organization.

Use the PermissionSetLicense object to query existing permission licenses.

For example, to return a list of all active permission set licenses:

```
SELECT MasterLabel
FROM PermissionSetLicense
WHERE Status = 'Active'
```

When combined with the PermissionSetLicenseAssign object, you can create a nested query that returns all users assigned to a particular permission set license like “Identity Connect”:

```
SELECT MasterLabel, (SELECT AssigneeId FROM PermissionSetLicenseAssignments)
FROM PermissionSetLicense
WHERE MaximumPermissionsIdentityConnect=true
```

SEE ALSO:

[PermissionSetLicenseAssign](#)

## PermissionSetLicenseAssign

---

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

**Note:** The relationship name for PermissionSetLicenseAssign is *PermissionSetLicenseAssignments*.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets

## Fields

Field Name	Details
AssigneeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>ID of the User to assign the permission set license specified in <code>PermissionSetLicenseId</code>.</p>
<code>PermissionSetLicenseId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the permission set license the user is assigned to.</p>

## Usage

Use the `PermissionSetLicenseAssign` object for querying permission set license assignments to find out which permission set licenses are assigned to which users. Because each user can be assigned to many permission set licenses, each `PermissionSetLicenseAssign` ID represents the association of a single user and single permission set license.

For example, to search for all of the permission sets assigned to a particular user:

```
SELECT Id, PermissionSetLicenseId
FROM PermissionSetLicenseAssign
WHERE AssigneeId = '005D0000001RFek'
```

To search for all users assigned to a particular permission set license:

```
SELECT AssigneeId
FROM PermissionSetLicenseAssign
WHERE PermissionSetLicenseId = '0PLD000000003mwOAA'
```

You can also create a new permission set license assignment, or use delete to remove a permission set license that's been assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

SEE ALSO:

[PermissionSetLicense](#)

## PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The tab name.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The permission set Id.</p>
Visibility	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates whether the tab is visible by default. Possible values are:</p> <ul style="list-style-type: none"><li>• DefaultOff</li><li>• DefaultOn</li></ul>

## Usage

Use the PermissionSetTabSetting object to find tab setting visibility settings, parent permission sets, and so forth.

For example, to find the visibility setting of a tab named "standard-Lead," do something like the following.

```
SELECT Visibility
FROM PermissionSetTabSetting
WHERE Name = 'standard-Lead'
```

## PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
ContainerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the community or org that contains the target.</p>
DraftRowId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the draft PersonalizationTargetInfo.</p>
GroupName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Group name of the target. Groups bundle related targets.</p>
PublishStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Publish status of the target. Possible values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Live</li> </ul>
TargetType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The type of the target.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• ExperienceVariation</li> <li>• NavigationLinkSet</li> <li>• Topic</li> <li>• CollaborationGroup</li> <li>• KnowledgeArticle</li> <li>• ContentDocument</li> <li>• ManagedContent</li> <li>• Report</li> <li>• Dashboard</li> <li>• Custom objects</li> </ul>
TargetValue	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>Value of the target. For ExperienceVariation, this is the developer name of the Experience Variation or the record ID for the object.</p>

## PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

## Supported Calls

`query ()`

## Fields

Field	Details
ActionListContext	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Required. The list context this action applies to. Valid values are:</p> <ul style="list-style-type: none"> <li>• ActionDefinition</li> <li>• Assistant</li> <li>• BannerPhoto</li> <li>• Chatter</li> <li>• Dockable</li> <li>• FeedElement</li> <li>• Flexipage</li> <li>• Global</li> <li>• ListView</li> <li>• ListViewDefinition</li> <li>• ListViewRecord</li> <li>• Lookup</li> <li>• MruList</li> <li>• MruRow</li> <li>• ObjectHomeChart</li> <li>• Photo</li> <li>• Record</li> <li>• RecordEdit</li> <li>• RelatedList</li> <li>• RelatedListRecord</li> </ul>
ActionTarget	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Nillable</p> <p><b>Description</b></p> <p>The URL to invoke or describe the action when the action is invoked. If the action is a standard button overridden by a Visualforce page, the ActionTarget returns the URL of the Visualforce page, such as <code>/apex/pagename</code>.</p> <p>This field is available in API version 35.0 and later.</p>
ActionTargetType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The type of the target when this action is triggered. Valid values are:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• <b>Describe</b>—applies to actions with a user interface, such as quick actions</li> <li>• <b>Invoke</b>—applies to actions with no user interface, such as action links or invocable actions</li> <li>• <b>Visualforce</b>—applies to standard buttons overridden by a Visualforce page</li> </ul>
ActionTargetUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL to invoke or describe the action when the action is invoked. This field is deprecated in API version 35.0 and later. Use <code>ActionTarget</code> instead.</p>
Category	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Applies only to action links. Denotes whether the action link shows up in the feed item list of actions or the overflow list of actions. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Primary</code></li> <li>• <code>Overflow</code></li> </ul>
ConfirmationMessage	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Applies only to action links. The message to display before the action is invoked. Field is null if no confirmation is required before invoking the action.</p>
DeviceFormat	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Specifies which action icon the PlatformAction query returns. If this field isn't specified, it defaults to Phone. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Aloha</code></li> <li>• <code>Desktop</code></li> <li>• <code>Phone</code></li> </ul>

Field	Details
	<ul style="list-style-type: none"><li>• Tablet</li></ul>
ExternalId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique ID for the PlatformAction. If the action doesn't have an ID, its API name is used.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique ID of a group of action links.</p>
IconContentType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The content type—such as .jpg, .gif, or .png—of the icon for this action. Applies to both custom and standard icons assigned to actions.</p>
IconHeight	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The height of the icon for this action. Applies only to standard icons.</p>
IconUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL of the icon for this action.</p>
IconWidth	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<b>Description</b> The width of the icon for this action. Applies only to standard icons.
InvocationStatus	<b>Type</b> picklist <b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort <b>Description</b> The status of the action within the feed item. Applies to action links only. Valid values are: <ul style="list-style-type: none"><li>Failed</li><li>New</li><li>Pending</li><li>Successful</li></ul>
InvokedByUserId	<b>Type</b> reference <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The ID of the user who most recently invoked this action within the current feed item. Applies to action links only.
IsGroupDefault	<b>Type</b> boolean <b>Properties</b> Defaulted on create, Filter, Group, Sort <b>Description</b> Denotes whether this action is the default in an action link group. False for other action types. Applies to action links only.
IsMassAction	<b>Type</b> boolean <b>Properties</b> Defaulted on create, Filter, Group, Sort <b>Description</b> Indicates whether the action can be performed on multiple records. This field is available in API version 38.0 and later.
Label	<b>Type</b> string

Field	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The label to display for this action.</p>
PrimaryColor	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The primary color of the icon for this action.</p>
RelatedListRecordId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the ID of a record in an object's related list. This field is available in API version 38.0 and later.</p>
RelatedSourceEntity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> When the <code>ActionListContext</code> is <code>RelatedList</code> or <code>RelatedListRecord</code>, this field represents the API name of the related list to which the action belongs.</p>
Section	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The section of the user interface the action resides in. Applicable only to Lightning Experience. Valid values are:</p> <ul style="list-style-type: none"> <li>• ActivityComposer</li> <li>• CollaborateComposer</li> <li>• NotesComposer</li> <li>• Page</li> <li>• SingleActionLinks</li> </ul> <p>This field is available in API version 35.0 and later.</p>

Field	Details
SourceEntity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Required. The object or record with which this action is associated.</p>
Subtype	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The subtype of the action. For quick actions, the subtype is <code>QuickActionType</code>. For custom buttons, the subtype is <code>WebLinkTypeEnum</code>. For action links, subtypes are <code>Api</code>, <code>ApiAsync</code>, <code>Download</code>, and <code>Ui</code>. Standard buttons and productivity actions have no subtype.</p>
TargetObject	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The type of object record the action creates, such as a contact or opportunity.  This field is available in API version 41.0 and later.</p>
TargetUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The URL that a custom button or link points to.  This field is available in API version 41.0 and later.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of the action. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <b>CustomButton</b>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</li> <li>• <b>InvocableAction</b></li> <li>• <b>ProductivityAction</b>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit or delete productivity actions.</li> <li>• <b>QuickAction</b>—A global or object-specific action.</li> <li>• <b>StandardButton</b>—A predefined Salesforce button such as New, Edit, and Delete.</li> </ul>

## Usage

PlatformAction can be described using describeSObject().

You can directly query for PlatformAction. For example, this query returns all fields for actions associated with each of the records of the listed objects:

```
SELECT ExternalId, ActionTargetType, ActionTargetUrl, ApiName, Category,
       ConfirmationMessage, ExternalId, GroupId, UiTheme, IconUrl, IconContentType,
       IconHeight, IconWidth, PrimaryColor, InvocationStatus, InvokedByUserId,
       IsGroupDefault, Label, LastModifiedDate, Subtype, SourceEntity, Type
FROM PlatformAction
WHERE SourceEntity IN ('001xx000003DGsH', '001xx000003DHBq', 'Task') AND
       ActionListContext = 'Record';
```

**Note:** To query PlatformAction, provide the ActionListContext and SourceEntity. If you query for ActionListContext with a value of RelatedList, and don't specify a RelatedSourceEntity, the query returns the API name of the related list. In API v43.0 and before, SourceEntity = '**Object API Name**' and ActionListContext = 'ListView' is an invalid combination to fetch quick actions in a SOQL query. Use SourceEntity = '**Object ID**' and ActionListContext = 'ListView' instead.

This query uses multiple ActionListContext values in its WHERE clause to return all actions in the Lightning Experience user interface (DeviceFormat = 'Desktop') for the specified object:

```
SELECT ActionListContext, Label, Type, Subtype, Section, SourceEntity,
       RelatedSourceEntity, ActionTarget, ActionTargetType, ApiName, Category,
       ConfirmationMessage, DeviceFormat, ExternalId, GroupId, IconContentType,
       IconHeight, IconUrl, IconWidth, Id, InvocationStatus, InvokedByUserId,
       IsGroupDefault, LastModifiedDate, PrimaryColor
FROM PlatformAction
WHERE ActionListContext IN ('Record', 'Chatter', 'RelatedList') AND
       SourceEntity = '001xx000003DlvX' AND
       DeviceFormat = 'Desktop';
```

## PlatformStatusAlertEvent

The documentation has moved to [PlatformStatusAlertEvent](#) in the *Platform Events Developer Guide*.

## PortalDelegablePermissionSet

---

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique string used to identify the record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language used in the org.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique string to identify the record.</p>
PermissionSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique ID of the permission set the DPUA profile can assign to other portal users.</p>
ProfileId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the DPUA profile.</p>

## PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `update()`, `query()`, `retrieve()`

### Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

### Fields

Field	Details
PresenceDeclineReasonId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the <a href="#">PresenceDeclineReason</a> record.</p>
PresenceUserConfigId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the <a href="#">PresenceUserConfig</a> record where the decline reasons are added.</p>

# PresenceDeclineReason

---

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the <a href="#">PresenceDeclineReason</a>.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The master label for the <a href="#">PresenceDeclineReason</a>.</p>

## PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

### Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

### Fields

Field	Details
Capacity	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The maximum number of work assignments that can be pushed to an agent at a time.</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the presence configuration.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The label of the presence configuration.</p>
OptionsIsAutoAcceptEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Indicates whether work items that are routed to agents are automatically accepted (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>false</code>.</p>
OptionsIsDeclineEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Indicates whether agents can decline work items that are routed to them (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsAutoAcceptEnabled</code> is set to <code>false</code>.</p>
OptionsIsDeclineReasonEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Indicates whether agents can select a reason for declining work requests (<code>true</code>) or not (<code>false</code>). This can be selected only if decline reasons are enabled.</p>
OptionsIsDisconnectSoundEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether a sound is played when agents are disconnected from Omni-Channel (<code>true</code>) or not (<code>false</code>).</p>
<code>OptionsIsRequestSoundEnabled</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter</p> <p><b>Description</b></p> <p>Indicates whether a sound plays with incoming work requests (<code>true</code>) or not (<code>false</code>). Set to <code>true</code> by default.</p>
<code>PresenceStatusOnDeclineId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the presence status that's automatically assigned to the agent when the agent declines a work item. Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>true</code>.</p>
<code>PresenceStatusOnPushTimeoutId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the presence status that's automatically assigned to the agent when the agent doesn't respond to a work item before push timeout occurs. Available in API version 36.0 and later.</p>

## PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

### Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
PresenceUserConfigId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> If an individual user is also assigned a presence configuration through the PresenceUserConfigProfile, this configuration will override that.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the profile that's associated with this presence configuration. A profile can be associated with only one presence configuration.</p>

## PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
PresenceUserConfigId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the presence configuration.</p>

Field	Details
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who's associated with this presence configuration. A user can be associated with only one presence configuration.</p>

## Pricebook2

Represents a price book that contains the list of products that your org sells.

 **Note:** Price books are represented by Pricebook2 objects. As of API version 8.0, the Pricebook object is no longer available. Requests containing Pricebook are refused, and responses do not contain the Pricebook object.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Text description of the price book.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the price book is active (<code>true</code>) or not (<code>false</code>). Inactive price books are hidden in many areas in the user interface. You can change this field's value as often as necessary. Label is <b>Active</b>.</p>

Field	Details
IsArchived	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the price book has been archived (true) or not (false). This field is read only.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the price book has been moved to the Recycle Bin (true) or not (false). Label is <b>Deleted</b>.</p>
IsStandard	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the price book is the standard price book for the org (true) or not (false). Every org has one standard price book—all other price books are custom price books.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name of this object. This field is read-only for the standard price book. Label is <b>Price Book Name</b>.</p>

## Usage

A price book is a list of products that your org sells.

- Each org has one standard price book that defines the standard or generic list price for each product or service that it sells.
- An org can have multiple custom price books to use for specialized purposes, such as for discounts, different channels or markets, or select accounts or opportunities. While your client application can create, delete, and update custom price books, your client application can only update the standard price book.
- For some orgs, the standard price book is the only price needed. If you need to set up other price books, you can reference the standard price book when setting up list prices in custom price books.

Use this object to query standard and custom price books that have been configured for your org. A common use of this object is to allow your client application to obtain valid Pricebook2 object IDs for use when configuring PricebookEntry records via the API.

Your client application can perform the following tasks on PricebookEntry objects:

- Query
- Create for the standard pricebook or custom pricebooks.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

## PriceBook2, Product2, and PricebookEntry Relationships

In the API:

- Price books are represented by Pricebook2 records (as of version 8.0, the Pricebook object is no longer available).
- Products are represented by Product2 records (as of version 8.0, the Product object is no longer available).
- Each price book contains zero or more entries (represented by PricebookEntry records) that specify the products that are associated with the price book. A price book entry defines the price for which you sell a product at a particular currency.

These objects are defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature enabled, the Pricebook2 object doesn't appear in the `describeGlobal()` call, and you can't access it via the API.

If you delete a Pricebook2 while a line item references PricebookEntry in the price book, the line item is unaffected, but the Pricebook2 is archived and unavailable from the API.

For a visual diagram of the relationships between Pricebook2 and other objects, see Product and Schedule Objects.

## Price Book Setup

The process of setting up a price book via the API usually means:

1. Load product data into Product2 records (creating one Product2 record for each product that you want to add).
2. For each Product2 record, create a PricebookEntry that links the Product2 record to the standard Pricebook2. You need to define a standard price for a product at a given currency (if you have multicurrency enabled), before defining a price for that product in the same currency in a custom price book.
3. Create a Pricebook2 record to represent a custom price book.
4. For each Pricebook2 record, creating a PricebookEntry for every Product2 that you want to add, specifying unique properties for each PricebookEntry (such as the UnitPrice and CurrencyIsoCode) as needed.

## Code Sample—Java

```

public void pricebookSample() {
    try {
        //Create a custom pricebook
        Pricebook2 pb = new Pricebook2();
        pb.setName("Custom Pricebok");
        pb.setIsActive(true);
        SaveResult[] saveResults = connection.create(new SObject[]{pb});
        pb.setId(saveResults[0].getId());

        // Create a new product
        Product2 product = new Product2();
        product.setIsActive(true);
        product.setName("Product");
        saveResults = connection.create(new SObject[]{product});
        product.setId(saveResults[0].getId());

        // Add product to standard pricebook
        QueryResult result = connection.query(
            "select Id from Pricebook2 where isStandard=true"
        );
        SObject[] records = result.getRecords();
        String stdPbId = records[0].getId();

        // Create a pricebook entry for standard pricebook
        PricebookEntry pbe = new PricebookEntry();
        pbe.setPricebook2Id(stdPbId);
        pbe.setProduct2Id(product.getId());
        pbe.setIsActive(true);
        pbe.setUnitPrice(100.0);
        saveResults = connection.create(new SObject[]{pbe});

        // Create a pricebook entry for custom pricebook
        pbe = new PricebookEntry();
        pbe.setPricebook2Id(pb.getId());
        pbe.setProduct2Id(product.getId());
        pbe.setIsActive(true);
        pbe.setUnitPrice(100.0);
        saveResults = connection.create(new SObject[]{pbe});
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}

```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### Pricebook2History

History is available for tracked fields of the object.

SEE ALSO:

[Product and Schedule Objects](#)

## Pricebook2History

---

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is always read-only.

## Fields

Field	Details
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the Pricebook2 associated with this record.</p>
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Name of the price book field that was modified, or a special value to indicate some other modification to the price book.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This is a standard system field. Label is <b>Deleted</b>.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> New value of the modified price book field. Maximum of 255 characters.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Previous value of the modified price book field. Maximum of 255 characters.</p>

## Usage

Price book history entries are indirectly created each time a price book is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

[Pricebook2](#)

# PricebookEntry

---

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
ActivePriceAdjustmentQuantity	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The count of active price adjustment schedules associated with the price book entry. This field is available in API version 49.0 and later.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Restricted picklist</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether this price book entry is active (<code>true</code>) or not (<code>false</code>). Although you can never delete PricebookEntry records, your client application can set this flag to <code>false</code>. Inactive PricebookEntry records are hidden in many areas in the user interface. You can change this flag on a PricebookEntry record as often as necessary.</p>
IsArchived	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the PricebookEntry has been archived (true) or not (false). This is set to <code>true</code> when the Product2 record it's associated with is archived, or when the Pricebook2 record is archived. This field is read only. Available in API version 45.0 and later. Label is <b>Archived</b>.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Name of this PricebookEntry record. This read-only field references the value in the Name field of the Product2 record. Label is <b>Product Name</b>.</p>
Pricebook2Id	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Required. ID of the Pricebook2 record with which this record is associated. This field must be specified when creating Pricebook2 records. It can't be changed in an update.</p>
Product2Id	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Required. ID of the Product2 record with which this record is associated. This field must be specified when creating Product2 records. It can't be changed in an update.</p>
ProductCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Product code for this record. This read-only field references the value in the <b>ProductCode</b> field of the associated Product2 record.</p>
UnitPrice	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Create, Filter, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Required. Unit price for this price book entry. You can specify a value only if <code>UseStandardPrice</code> is set to <code>false</code>. Label is <b>List Price</b>.</p>
<code>UseStandardPrice</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether this price book entry uses the standard price defined in the standard Pricebook2 record (<code>true</code>) or not (<code>false</code>). If set to <code>true</code>, then the <code>UnitPrice</code> field is read-only, and the value will be the same as the <code>UnitPrice</code> value in the corresponding PricebookEntry in the standard price book (that is, the PricebookEntry record whose <code>Pricebook2Id</code> refers to the standard price book and whose <code>Product2Id</code> and <code>CurrencyIsoCode</code> are the same as this record). For PricebookEntry records associated with the standard Pricebook2 record, this field must be set to <code>true</code>.</p>

## Usage

Use this object to define the association between your organization's products (Product2) and your organization's standard price book or to other, custom-defined price books ( Pricebook2). Create one PricebookEntry record for each standard or custom price and currency combination for a product in a Pricebook2.

When creating these records, you must specify the IDs of the associated Pricebook2 record and Product2 record. Once created, your client application can't update these IDs.

This object is defined only for those organizations that have products enabled as a feature. If the organization does not have the products feature enabled, then the PricebookEntry object does not appear in the `describeGlobal()` call, and you can't access it.

If you delete a PriceBookEntry while a line item references it, the line item is unaffected, but the PriceBookEntry will be archived and unavailable from the API. Deleted PriceBookEntry records can't be recovered.

You must load the standard price for a product before you are permitted to load its custom price(s).

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### PricebookEntryHistory

History is available for tracked fields of the object.

SEE ALSO:

[Object Basics](#)

# ProcessDefinition

---

Represents the definition of a single approval process.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Portal and communities users with the Customer Community Plus and Partner Community licenses can access this object. All users in org with approvals enabled have read access to ProcessDefinition.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> A description of this process, with a maximum of 3,000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The external name of the process; the name seen by users.</p>
LockType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of lock applied to the record being approved. When a record is in the approval process, it's always locked, and only an administrator can edit it. However, the currently assigned approver can also be allowed to edit the record.</p> <ul style="list-style-type: none"> <li>• Total</li> <li>• Admin</li> <li>• Owner</li> <li>• Workitem</li> <li>• Node</li> <li>• none</li> </ul>

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The unique process name, used internally.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The current state of this process.</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Obsolete</li> </ul>
TableEnumOrId	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies the object associated with the approval process, such as Account or Contact.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of this process.</p> <ul style="list-style-type: none"> <li>• Approval Process—Used to control the action taken for a record.</li> <li>• State-based Process—Used internally to track various control processes, such as for developing Salesforce Knowledge articles.</li> </ul>

## Usage

Use this object to read the description of an approval process. The definition is read-only.

## ProcessInstance

---

Represents an instance of a single, end-to-end approval process. Use this and the `node`, `step`, and `workitem` process instance objects to create approval history reports.

**Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

For approval process instances that were completed before the Summer '14 rollout, all Process Instance fields are automatically populated, with one exception: `CompletedDate` is never populated for approval process instances that were completed before January 1, 2013. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstance fields are automatically populated, with two exceptions: `CompletedDate` and `LastActorId` are populated only after the approval process instance is complete.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
<code>CompletedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The completion date and time of the approval process. The <code>ElapsedTimeDay</code>, <code>ElapsedTimeHours</code>, and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code>.</p>
<code>ElapsedTimeInDays</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total elapsed time in days between when the approval process instance was started and now.</p>
<code>ElapsedTimeInHours</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> The total elapsed time in hours between when the approval process instance was started and now.</p>
ElapsedTimeInMinutes	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total elapsed time in minutes between when the approval process instance was started and now.</p>
LastActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Filter, Nillable, Sort</p> <p><b>Description</b> The last actor that approved, rejected, or recalled the process.</p>
ProcessDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Filter, Sort</p> <p><b>Description</b> The ID of this approval process instance.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of this approval process instance, for example Started, Pending, or Approved.</p>
TargetObjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the object affected by this approval process instance.</p>

## Usage

Use this object to query or retrieve an approval process.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProcessInstanceHistory

History is available for tracked fields of the object.

SEE ALSO:

[ProcessInstanceHistory](#)

[ProcessInstanceStep](#)

[ProcessInstanceWorkitem](#)

## ProcessInstanceHistory

---

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

## Supported Calls

`describeSObjects()`

## Fields

Field	Details
ActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the user who is currently assigned to this ProcessInstance.</p>
Comments	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Comments for a ProcessInstanceStep. This field doesn't apply to ProcessInstanceWorkitem records.</p>
ElapsedTimeInDays	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in days between when the approval process instance was started and when it was completed.</p>
ElapsedTimeInHours	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in hours between when the approval process instance was started and when it was completed.</p>
ElapsedTimeInMinutes	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in minutes between when the approval process instance was started and when it was completed.</p>
IsPending	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the ProcessInstance is pending (<code>true</code>) or not (<code>false</code>).</p>

Field	Details
OriginalActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the user who was originally assigned this ProcessInstance.</p>
ProcessInstanceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the ProcessInstance.</p>
ProcessNodeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of this step.</p>
RemindersSent	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number of reminders that have been sent. Default is 0 (zero).</p>
StepStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Indicates the current status of the ProcessInstanceStep.</p>
TargetObjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the object being approved.</p>

## Usage

This object helps you replicate the related list functionality of the Salesforce user interface for approval processes. Use `ProcessInstanceHistory` for a unified read-only view of the `ProcessInstanceStep` and `ProcessInstanceWorkitem` objects. You can't query `ProcessInstanceHistory`. Instead, you can query `ProcessInstanceHistory` by including it in a nested query on the parent `ProcessInstance` object. For example, the following SOQL query returns all the `ProcessInstanceHistory` records related to individual `ProcessInstance` records. The nested query references `StepsAndWorkitems`, which is the child `relationshipName` for `ProcessInstanceHistory` in the `ProcessInstance` object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM StepsAndWorkitems)
FROM ProcessInstance
```

This object respects field-level security on the parent object.

SEE ALSO:

[ProcessInstance](#)

[ProcessInstanceStep](#)

[ProcessInstanceWorkitem](#)

## ProcessInstanceStep

---

Represents one work item in an approval process (`ProcessInstance`).

 **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

`ProcessInstanceStep` fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all `ProcessInstanceStep` fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
<code>ActorId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the user who is currently assigned to this approval step.</p>

Field	Details
Comments	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Limit: 4,000 bytes.</p>
ElapsedTimeInDays	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in days since this step was started.</p>
ElapsedTimeInHours	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in hours since this step was started.</p>
ElapsedTimeInMinutes	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in minutes since this step was started.</p>
OriginalActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the user who was originally assigned to this approval step.</p>
ProcessInstanceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the ProcessInstance that this approval step belongs to.</p>

Field	Details
StepNodeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the node currently assigned to this approval step.</p>
StepStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The current status of this approval step.</p> <ul style="list-style-type: none"> <li>• Approved</li> <li>• Fault</li> <li>• Held</li> <li>• NoResponse</li> <li>• Pending</li> <li>• Reassigned</li> <li>• Rejected</li> <li>• Removed</li> <li>• Started</li> </ul> <p>If the approval step requires unanimous approval and one approver rejects the request, the value of this field for the other approvers changes to NoResponse. Likewise, if approval is based on the first response and an approver responds, the value of this field for the other approvers changes to NoResponse.</p>

## Usage

Query or retrieve a new step in an approval process (ProcessInstance).

SEE ALSO:

[ProcessInstance](#)

[ProcessInstanceHistory](#)

[ProcessInstanceWorkitem](#)

## ProcessInstanceNode

Represents a step in an instance of an approval process. Compare to ProcessNode, which describes the step in a process definition. Use this object to retrieve approval history.

 **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceNode fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceNode fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
CompletedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The completion date and time of this step in the approval process. The <code>ElapsedTimeDay</code>, <code>ElapsedTimeHours</code>, and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code>.</p>
ElapsedTimeInDays	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in days since this step was started.</p>
ElapsedTimeInHours	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in hours since this step was started.</p>
ElapsedTimeInMinutes	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> The total time in minutes since this step was started.</p>
LastActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The last actor that approved or rejected this step.</p>
NodeStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status of this approval instance, for example Started, Pending, or Approved.</p>
ProcessInstanceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The approval process this step is part of.</p>
ProcessNodeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The identifier for this step.</p>
ProcessNodeName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of this step.</p>

# ProcessInstanceWorkitem

---

Represents a user's pending approval request.

-  **Note:** Exceptions apply to approval history data retrieved with this object and available only via the SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceWorkitem fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceWorkitem fields are populated after the approval process instance is next acted upon after the Summer '14 rollout, with three exceptions: `ElapsedTimeInDays`, `ElapsedTimeInHours`, and `ElapsedTimeInMinutes` fields are never populated in ProcessInstanceWorkitem records for which equivalent ProcessInstanceStep records were created before the Summer '14 rollout.

For all other ProcessInstanceWorkitem records, these three fields are populated after the approval process instance is next acted upon after the Summer '14 rollout.

-  **Note:** Because ProcessInstanceHistory combines fields from ProcessInstanceStep and ProcessInstanceWorkitem, you may notice incorrect elapsed times of 0 in ProcessInstanceHistory records because the elapsed time fields were never populated in the related ProcessInstanceWorkitem record.

## Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

Field	Details
<code>ActorId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who is currently responsible for approving an approval request.</p>
<code>ElapsedTimeInDays</code>	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in days since this approval request was started.</p>
<code>ElapsedTimeInHours</code>	<p><b>Type</b> double</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in hours since this approval request was started.</p>
ElapsedTimeInMinutes	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total time in minutes since this approval request was started.</p>
OriginalActorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who was originally assigned this approval request.</p>
ProcessInstanceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the ProcessInstance associated with this approval request.</p>

## Usage

Use this object to manage a pending approval request for a user.

SEE ALSO:

- [ProcessInstance](#)
- [ProcessInstanceHistory](#)
- [ProcessInstanceStep](#)

## ProcessNode

Describes a step in a process definition. Compare to ProcessInstanceNode, which describes the step in a running process.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> A description of this node, no longer than 3,000 bytes.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The external name of the node; the name seen by users.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The unique node name.</p>
ProcessDefinition	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the object affected by this approval instance.</p>

## Usage

Use this object to get the description of a process definition.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkitem records related to individual ProcessInstance records. The nested query references `workitems`, which is the child `relationshipName` for ProcessInstanceWorkitem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkitem objects.

## Product2

---

Represents a product that your org sells.

This object has several fields that are used only for quantity and revenue schedules (for example, annuities). Schedules are available only for orgs that have enabled the products and schedules features. If these features aren't enabled, the schedule fields don't appear in the DescribeSObjectResult, and you can't query, create, or update the fields.

 **Note:** Products are represented by Product2 objects. As of API version 8.0, the Product object is no longer available. Requests containing Product are refused, and responses do not contain the Product object.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
CanUseQuantitySchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). Label is <b>Quantity Scheduling Enabled</b>.</p>
CanUseRevenueSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). Label is <b>Revenue Scheduling Enabled</b>.</p>
ConnectionReceivedId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Restricted picklist</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A text description of this record. Label is <b>Product Description</b>.</p>
DisplayUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> URL leading to a specific version of a record in the linked external data source.</p>
ExternalDataSourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> ID of the related external data source.</p>
ExternalId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique identifier of a record in the linked external data source. For example, <i>ID #123</i>.</p>
Family	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of the product family associated with this record. Product families are configured as picklists in the user interface. To obtain a list of valid values, call <code>describeObjects()</code> and process the <code>DescribeObjectResult</code> for the values associated with the <code>Family</code> field. Label is <b>Product Family</b>.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Inactive Product2 records are hidden in many areas in the user interface. You can change the <code>IsActive</code> flag on a Product2 object as often as necessary. Label is <b>Active</b>.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Required. Default name of this record. Label is <b>Product Name</b>.</p>
NumberOfQuantityInstallments	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>If the product has a quantity schedule, the number of installments.</p>
NumberOfRevenueInstallments	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>If the product has a revenue schedule, the number of installments.</p>
ProductCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Default product code for this record. Your org defines the product code naming pattern.</p>
QuantityInstallmentPeriod	<p><b>Type</b></p> <p>picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> If the product has a quantity schedule, the amount of time covered by the schedule.</p>
QuantityScheduleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of the quantity schedule, if the product has one.</p>
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unit of the product; for example, kilograms, liters, or cases. This field comes with only one value, Each, so you may want to create your own. The <code>QuantityUnitOfMeasure</code> field on <code>ProductItem</code> inherits this field's values.</p>
RecalculateTotalPrice	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Changes behavior of <code>OpportunityLineItem</code> calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price.</p>
RevenueInstallmentPeriod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> If the product has a revenue schedule, the period of time covered by the schedule.</p>
RevenueScheduleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The type of the revenue schedule, if the product has one.</p>
StockKeepingUnit	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The SKU for the product. Use in tandem with or instead of the <code>ProductCode</code> field. For example, you can track the manufacturer's identifying code in the Product Code field and assign the product a SKU when you resell it.</p>

## Schedule Enabled Flags

When enabling the schedules feature, orgs can decide whether to enable quantity schedules, revenue schedules, or both. In addition, you can use the API to control quantity and revenue scheduling at the product level via the `CanUseQuantitySchedule` and `CanUseRevenueSchedule` flags. A value of `true` for either flag indicates that the product and any `OpportunityLineItems` can have a schedule of that type. These flags can be set when creating or updating `Product2` records.

## Default Schedule Fields

The remaining schedule fields for this object define default schedules. Default schedule values are used to create an `OpportunityLineItemSchedule` when an `OpportunityLineItem` is created for the `Product`.

The default schedule fields support the following valid values (all fields are also nillable).

Field	Valid Values
<code>RevenueScheduleType</code>	Divide, Repeat
<code>RevenueInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfRevenueInstallments</code>	Integer between 1 to 150, inclusive.
<code>QuantityScheduleType</code>	Divide, Repeat
<code>QuantityInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfQuantityInstallments</code>	Integer between 1 to 150, inclusive

When you attempt to set the schedule fields when creating or updating, the API applies cross-field integrity checks. The integrity requirements are:

- If the schedule type is nil, the installment period and number of installments must be nil.
- If the schedule type is set to any value, then the installment period and number of installments must be non-nil.

Any create or update that fails these integrity checks is rejected with an error.

These default schedule fields, as well as `CanUseQuantitySchedule` and `CanUseRevenueSchedule`, are restricted picklist fields and are available only if the org has the schedules feature enabled.

## Usage

Use this object to define the default product information for your org. This object is associated by reference with `Pricebook2` objects via `PricebookEntry` objects. The same product can be represented in different price books as price book entries. In fact, the same product can be represented multiple times (as separate `PricebookEntry` records) in the same price book with different prices or currencies. A product can only have one price for a given currency within the same price book. To be used in custom price books, all standard prices must be added as price book entries to the standard price book.

You can query the products that have been configured for your org. For example, you can allow your client application to obtain valid product IDs for use when configuring `PricebookEntry` records via the API. Your client application can perform the following tasks on `PricebookEntry` objects:

- Query
- Create for the standard pricebook or custom pricebooks.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

This object is defined only for those orgs that have products enabled as a feature. If the org does not have the products feature, this object does not appear in the `describeGlobal()` call, and you can't describe or query this object.

If you try to delete a product via the API but there is an opportunity that uses that product, the delete fails. The workaround is to delete the product in the user interface, which gives you an option to archive the product.

 **Note:** On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **Product2Feed (API version 18.0)**

Feed tracking is available for the object.

### **Product2History**

History is available for tracked fields of the object.

SEE ALSO:

[Object Basics](#)

## Product2DataTranslation

---

Represents the translated values of the data stored within a `Product2` record's fields. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the “View Setup and Configuration” permission

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The translated value for the Product2 description.</p>
IsOutOfDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent Product2 record is updated after the last translation was filed.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language for these translated values.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The translated value for the Product2 record name. This field is required to translate the text in other fields.</p>

Field	Details
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The record ID of the Product2 associated with the data that is being translated.</p>

## Usage

Use this object to translate the data stored in a Product2 record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the Product2 object, additional Product2DataTranslation fields exist for translating the data contained within those fields.

## ProductCategory

Represents the category that products are organized in. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

## Fields

Field	Details
CatalogId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the catalog.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The default value is <code>USD</code>.</p>
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The description of the category.</p>
IsNavigational	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The default value is <code>false</code>.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Name of the category.</p>
NumberOfProducts	<p><b>Type</b></p> <p>int</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of products in a category.</p>
ProductCategoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the category.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Order that the category is displayed in.</p>

## ProductCategoryDataTranslation

Represents the translated values for the data stored within a [ProductCategory](#) record's fields. This object is available in API version 46.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

### Fields

Field	Details
Description	<p><b>Type</b> textarea</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The translated value for the Product Category description.</p>
IsOutOfDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent ProductCategory record is updated after the last translation was filed.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language for these translated values.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p>

## Usage

Use this object to translate the data stored in a Product Category record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the ProductCategory object, additional ProductCategoryDataTranslation fields exist for translating the data contained within those fields.

# ProductConsumed

---

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

 **Note:** To create or delete products consumed, you need Create permission on product items.

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Notes and context about the product consumed.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product consumed was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product consumed was last viewed.</p>
PricebookEntryId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Price book associated with the product consumed. If the work order and the product item's associated product are related to the same price book, the Price Book Entry auto-populates based on the product item.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Product associated with the product consumed.</p>
ProductConsumedNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) Auto-generated number identifying the product consumed.</p>
ProductItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Product item associated with the product consumed. Creating a product consumed record subtracts the quantity consumed from the linked product item's quantity.</p>
ProductName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name for the product consumed.</p>
QuantityConsumed	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The quantity of products consumed.</p>
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Units of the consumed item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
UnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The price per unit of the product consumed.</p>
WorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Work order that the product was consumed for.</p>
WorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Work order line item that the product was consumed for.</p>

## Usage

When a product is consumed during the completion of a work order, create a product consumed record to track its consumption. You can add products consumed to work orders or work order line items. Track product consumption at the line item level if you want to know which products were used for each line item's tasks.

The way you use products consumed depends on how closely you want to track the state of your inventory in Salesforce. If you want to track the entire life cycle of items in your inventory, including their storage, transfer, and consumption, link your products consumed records to product items. This approach ensures that your inventory numbers auto-update to reflect the consumption of products from

your inventory. If you want to track product consumption only, however, specify a Price Book Entry on each product consumed record and leave the Product Item field blank.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProductConsumedFeed

Feed tracking is available for the object.

### ProductConsumedHistory

History is available for tracked fields of the object.

## ProductEntitlementTemplate

---

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

## Fields

Field	Details
EntitlementTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the entitlement template. Must be a valid ID.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the Product2 associated with the entitlement template. Must be a valid ID.</p>

## Usage

Use to query and manage entitlement templates.

SEE ALSO:

[Entitlement](#)

## ProductItem

---

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
<code>LastReferencedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product item was last modified. Its label in the user interface is Last Modified Date.</p>
<code>LastViewedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product item was last viewed.</p>
<code>LocationId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

**Field Name****Details**

Field Name	Details
	<p><b>Description</b> Location associated with the product item. This usually indicates where the product item is stored.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The product item's owner.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Product associated with the product item, which represents the type of product in your inventory.</p>
ProductItemNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) Auto-generated number identifying the product item.</p>
ProductName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A name for the product item. Try to select a name that indicates what is being stored where; for example, Batteries in Warehouse A.</p>
QuantityOnHand	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The quantity at the location. If you want to add a serial number, this value must be 1.</p>

Field Name	Details
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Units of the product item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
SerialNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A unique number for identification purposes. If you want to enter a serial number, the Quantity on Hand must be 1.</p>

## Usage

Each product item is associated with a product and a location in Salesforce. If a product is stored at multiple locations, the product will be tracked in a different product item for each location.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ProductItemFeed](#)

Feed tracking is available for the object.

### [ProductItemHistory](#)

History is available for tracked fields of the object.

### [ProductItemOwnerSharingRule](#)

Sharing rules are available for the object.

### [ProductItemShare](#)

Sharing is available for the object.

## ProductItemTransaction

---

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A description of the transaction. The description is blank when the transaction record is created, but can be updated.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
ProductItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The associated product item.</p>

Field Name	Details
ProductItemTransactionNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) Auto-generated number identifying the product item transaction.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> The quantity of the product item involved in the transaction. If inventory was consumed, the quantity is negative.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read Only) The product consumed or product transfer related to the action. If the action wasn't related to consumption or transfer, the related record is blank.</p>
TransactionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The action that the transaction tracks.</p> <ul style="list-style-type: none"> <li>• Replenished: When a part is stocked at a location. A Replenished transaction is created when a product item is created.</li> <li>• Consumed: When parts are consumed to complete a work order. A Consumed transaction is created when a record is added to the Products Consumed related list on a work order or work order line item.</li> <li>• Adjusted: When there is a discrepancy or a change in consumption. An Adjusted transaction is created when a product item's Quantity on Hand is edited, a product consumed is updated or delete, or a product transfer is deleted.</li> <li>• Transferred: When parts are transferred between locations.</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProductItemTransactionFeed

Feed tracking is available for the object.

### ProductItemTransactionHistory

History is available for tracked fields of the object.

## ProductMedia

---

Represents the rich media, including images and attachments, that can be added to products. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The default value is USD.</p>
ElectronicMediaGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Unique ID of the media group.</p>
ElectronicMediaId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Unique ID of the media record.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Name of the media.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner of the product media file.</p>
ProductId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the product that the media is associated with.</p>

Field	Details
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The order that product media is displayed in.</p>

## ProductRequest

Represents an order for a part or parts in field service.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The account associated with the product request.</p>
CareProgramEnrolleeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the care program enrollee associated with the product request. This field is available from API version 49.0 and later.</p>
CaseId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The case associated with the product request.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is Currency ISO Code.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A text field for details not recorded in the provided fields.</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Where the product is delivered.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product request was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product request was last viewed.</p>

Field Name	Details
NeedByDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date the product must be delivered by.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the shipment.</p>
ProductRequestNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-assigned number that identifies the shipment.</p>
ShipToAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The address that the product is to be delivered to.</p>
ShipToCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city that the product is to be delivered to.</p>
ShipToCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country that the product is to be delivered to.</p>

Field Name	Details
ShipToGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The accuracy of the geocode for the shipping address.</p>
ShipToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The latitude of the location where the product is to be delivered to.</p>
ShipToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The longitude of the location where the product is to be delivered to.</p>
ShipToPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the address where the product is to be delivered to.</p>
ShipToState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the state where the product is to be delivered to.</p>
ShipToStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street address where the product is to be delivered to.</p>

Field Name	Details
ShipmentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The type of shipment. The picklist includes the following values by default:</p> <ul style="list-style-type: none"><li>• None</li><li>• Rush</li><li>• Overnight</li><li>• Next Business Day</li><li>• Pick Up</li></ul>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The location the product is shipped from.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Status of the product transfer.</p>
WorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work order that the product request is related to.</p>
WorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work order line item that the product request is related to.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProductRequestFeed

Feed tracking is available for the object.

### ProductRequestHistory

History is available for tracked fields of the object.

### ProductRequestOwnerSharingRule

Sharing rules are available for the object.

### ProductRequestShare

Sharing is available for the object.

## ProductRequestLineItem

---

Represents a request for a part in field service. Product request line items are components of product requests.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The account associated with the product request line item.</p>
CareProgramEnrolleeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the care program enrollee associated with the product request line item. This field is available from API version 49.0 and later.</p>

Field Name	Details
CaseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The case associated with the product request line item.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Details not recorded in the provided fields.</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Where the product is delivered.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
NeedByDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date the product must be delivered by.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The product request that the line item belongs to.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The product associated with the product request line item.</p>
ProductRequestLineNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) An auto-assigned number that identifies the product request line item.</p>
QuantityRequested	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The amount requested.</p>
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Units of the requested product; for example, grams, liters, or units. The picklist values can be customized.</p>

Field Name	Details
ShipToAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The physical address where the product is needed.</p>
ShipToCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the address where the product is needed.</p>
ShipToCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the address where the product is needed.</p>
ShipToGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy level of the geocode for the address where the product is needed. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Longitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between -90 and 90 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>

Field Name	Details
ShipToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Latitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipToPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the address where the product is needed.</p>
ShipToState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the address where the product is needed.</p>
ShipToStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street of the address where the product is needed.</p>
ShipmentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The type of shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"><li>• Rush</li><li>• Overnight</li></ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Next Business Day</li> <li>• Pick Up</li> </ul>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Where the product is at the time of the request.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Submitted</li> <li>• Received</li> </ul>
WorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work order for which the product is needed.</p>
WorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work order line item for which the product is needed.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ProductRequestLineItemFeed](#)

Feed tracking is available for the object.

**ProductRequestLineItemHistory**

History is available for tracked fields of the object.

## ProductRequired

---

Represents a product that is needed to complete a work order or work order line item in field service.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product required was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product required was last viewed.</p>
ParentRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The work order or work order line item that the product is required for.</p>

Field Name	Details
ParentRecordType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates whether the parent record is a work order or a work order line item.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The required product.</p>
ProductName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the product required.</p>
ProductRequiredNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) Auto-generated number identifying the product required.</p>
QuantityRequired	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Quantity required of the product.</p>
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Units of the required product; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>

## Usage

Required products can be added to work types, work orders, and work order line items to ensure that the assigned service resource arrives with the right equipment.

Adding required products to work types saves you time and keeps your business processes consistent. Work orders and work order line items inherit their work type's required products. For example, if all light bulb replacement jobs require a ladder and a light bulb, add the ladder and light bulb as required products to your Light Bulb Replacement work type. When it's time to create a work order for a customer's light bulb replacement, applying that work type to the work order adds the required products.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProductRequiredFeed

Feed tracking is available for the object.

### ProductRequiredHistory

History is available for tracked fields of the object.

## ProductTransfer

Represents the transfer of inventory between locations in field service.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
Description	<p><b>Type</b></p> <p>textarea</p>

Field Name	Details
	<p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Details not recorded in the provided fields.</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The place the product is to be delivered.</p>
ExpectedPickupDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date the product is expected to be picked up.</p>
IsReceived	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Checkbox identifying that the product was received.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product request was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the product request was last viewed.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Owner of the product transfer.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the product associated with the product transfer.</p>
ProductRequestId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Lookup field for the product request associated with the product transfer.</p>
ProductRequestLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the product request line item associated with the product transfer.</p>
ProductTransferNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-assigned number that identifies the product transfer.</p>
QuantityReceived	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Amount of product received at the destination location.</p>

Field Name	Details
QuantitySent	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Amount of product sent from the source location.</p>
QuantityUnitOfMeasure	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The units of the product, for example grams, liters, or units.</p>
ReceivedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the contact who received the product at the destination location.</p>
ReturnOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The return order associated with the product transfer.</p>
ReturnOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The return order line item associated with the product transfer.</p>
ShipmentExpectedDeliveryDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Lookup field for the shipment related to the product transfer.</p>

Field Name	Details
ShipmentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the shipment related to the product transfer.</p>
ShipmentStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Lookup field for the shipment related to the product transfer.</p>
ShipmentTrackingNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Lookup field for the shipment related to the product transfer.</p>
ShipmentTrackingUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Lookup field for the shipment related to the product transfer.</p>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the source location related to the product transfer.</p>
SourceProductId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Lookup field for the product item related to the product transfer.</p>

Field Name	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Status of the product transfer.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ProductTransferFeed

Feed tracking is available for the object.

### ProductTransferHistory

History is available for tracked fields of the object.

### ProductTransferOwnerSharingRule

Sharing rules are available for the object.

### ProductTransferShare

Sharing is available for the object.

## Profile

Represents a profile, which defines a set of permissions to perform different operations, such as querying, adding, updating, or deleting information.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `delete()`

## Special Access Rules

As of Summer '20 and later, Customer Portal and Partner Portal users *cannot* access this object.

To view the following settings, assignments, and permissions for standard and custom objects in a specified profile, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components

- Record types

## Fields

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the profile.</p>
IsSsoEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, users assigned to this profile can delegate username and password authentication to a corporate database instead of the user database.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this profile. Available in API version 29.0 and later.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this profile. Available in API version 29.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the profile.</p>

Field	Details
PermissionsShowCompanyNameAsUserBadge	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> When on, a user's company name, if available, will be displayed in place of the community role.</p>
PermissionsPermissionName	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Update</p> <p><b>Description</b> One field for each permission. If <code>true</code>, users assigned to this profile have the named permission. The number of fields varies depending on the permissions for the organization and license type.</p> <p> <b>Tip:</b> To get a list of available permissions in the SOAP API, use <code>describeSObjects()</code>.</p>
UserLicenseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the UserLicense associated with this profile.</p>
UserType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The category of user license. Each <code>UserType</code> is associated with one or more UserLicense records. Each UserLicense is associated with one or more profiles. In API version 10.0 and later, valid values include:</p> <ul style="list-style-type: none"> <li>• Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is <b>Standard</b>.</li> <li>• PowerPartner: User whose access is limited because he or she is a partner and typically accesses the application through a partner portal or community. Label is <b>Partner</b>.</li> <li>• CSPLitePortal: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal or community. Label is <b>High Volume Portal</b>.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li data-bbox="560 262 1459 346">• CustomerSuccess: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal User</b>.</li> <li data-bbox="560 367 1459 472">• PowerCustomerSuccess: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal Manager</b>.</li> </ul> <p data-bbox="592 483 1459 546">Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.</p> <ul style="list-style-type: none"> <li data-bbox="560 577 1459 640">• CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is <b>Chatter Free</b>.</li> </ul> <p data-bbox="560 651 1459 714"><code>UserType</code> replaces <code>LicenseType</code>, which is unavailable as of API version 10.0. In API versions 8.0 and 9.0 <code>LicenseType</code> is still available with the following valid values:</p> <ul style="list-style-type: none"> <li data-bbox="560 735 1459 766">• AUL: Lightning Platform user license. Label is <b>Apex Platform</b>.</li> <li data-bbox="560 777 1459 808">• AUL1: Lightning Platform user license with only one user. Label is <b>Apex Platform One</b>.</li> <li data-bbox="560 819 1459 850">• Salesforce: Salesforce user license. Label is <b>Salesforce</b>.</li> <li data-bbox="560 861 1459 924">• PackageManager: user who can create and work with managed packages for Salesforce AppExchange. Label is <b>Package Manager</b>.</li> <li data-bbox="560 934 1459 997">• PRM: user whose access is limited because he or she is a partner and typically accesses the application through a partner portal. Label is <b>Partner</b>.</li> <li data-bbox="560 1008 1459 1071">• CustomerUser: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal User</b>.</li> <li data-bbox="560 1081 1459 1186">• CustomerManager: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal Manager</b>.</li> </ul> <p data-bbox="592 1197 1459 1260">Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.</p>

## Usage

Use the Profile object to query the set of currently configured user profiles in your organization. Your client application can use Profile objects to obtain valid profile IDs for use when querying or modifying users through the API.

In the user interface, profiles can be used to assign user licenses from specific pools (Lightning Platform user license or Salesforce user license, for example). If a user is assigned to a profile with a different license type, the number of available licenses in the old license type pool increases, one per user changed, and decreases by the same amount in the new license type pool.

### SEE ALSO:

[Object Basics](#)

[PermissionSet](#)

# ProfileSkill

---

Represents a profile skill, which describes a user's professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

 **Note:** For information about Live Agent skills, see the [Skill](#) topic.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the profile skill.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp indicating when the current user last viewed a record related to this profile skill. Available in API version 29.0 and later.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp indicating when the current user last viewed this profile skill. Available in API version 29.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The name of the profile skill.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the profile skill.</p>
UserCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of users with the profile skill.</p>

## Usage

Use the ProfileSkill object to look up the attributes of a skill that can be assigned to a user. This is a global object and is not owned by any specific user.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **ProfileSkillFeed (API version 34.0)**

Feed tracking is available for the object.

### **ProfileSkillHistory**

History is available for tracked fields of the object.

### **ProfileSkillOwnerSharingRule**

Sharing rules are available for the object.

### **ProfileSkillShare**

Sharing is available for the object.

## ProfileSkillEndorsement

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the profile skill being endorsed.</p>
ProfileSkillUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the ProfileSkillUser record that is being endorsed.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user ID of the person giving the endorsement.</p>

## Usage

Use the ProfileSkillEndorsement object to query about a single endorsement given to a user about a specific skill. Users can't endorse themselves, they can only be endorsed by others unless they are administrators with the "Modify All Data" permission.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ProfileSkillEndorsementFeed \(API version 34.0\)](#)

Feed tracking is available for the object.

### [ProfileSkillEndorsementHistory](#)

History is available for tracked fields of the object.

# ProfileSkillShare

---

Represents a sharing entry on a ProfileSkill.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the User or Group has to the ProfileSkill. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All (This value is not valid for <code>create()</code> or <code>update()</code> calls.)</li> </ul> <p>This value must be set to an access level that is higher than the organization's default access level for ProfileSkill objects.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the parent object, if any.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists.</p> <p>You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p>

Field Name	Details
	<p>Values may include:</p> <ul style="list-style-type: none"> <li><code>Manual</code>—The User or Group has access because a user with “All” access manually shared the ProfileSkill with them.</li> <li><code>Owner</code>—The User is the owner of the ProfileSkill or is in a role above the ProfileSkill owner in the role hierarchy.</li> </ul>
<code>UserOrGroupId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the User or Group that has been given access to the ProfileSkill.</p>

## Usage

This object is read only. It is visible because of constraints to the ProfileSkill object, but it is ignored and does not control which users and groups can view and edit ProfileSkill records owned by other users.

## ProfileSkillUser

Represents a detail relationship of User. The object connects profile skills with users.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
<code>EndorsementCount</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of endorsements.</p>
<code>Name</code>	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the skill user.</p>
ProfileSkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the ProfileSkill.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user. This field can't be changed once it is created.</p>

## Usage

Use this object to assign specific skills to specific users. ProfileSkillUser appears on the Overview tab on the Chatter profile page. Users can only create a skill mapping for themselves, they can't create skill mappings for others unless they are administrators with the "Modify All Data" permission. Additionally, users can only edit this object if they are the context user and are not editing the `userId` field.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **ProfileSkillUserFeed (API version 34.0)**

Feed tracking is available for the object.

### **ProfileSkillUserHistory**

History is available for tracked fields of the object.

## Prompt

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile or permission that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

If the package includes walkthroughs for standard apps that are part of an org, the walkthroughs are installed, but they aren't visible to users without the org subscribing to myTrailhead or starting a 30-day trial. However, orgs that don't subscribe to myTrailhead or start a trial can show users walkthroughs from packages that have a walkthrough on at least one custom app page.

Walkthroughs can be only included in unmanaged packages, or in security-reviewed, first-generation managed packages.

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>

Field	Details
	<p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the language used in the org where the in-app guidance was created.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label.. Maximum of 80 characters.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><code>namespacePrefix__componentName</code></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>

## PromptAction

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Fields

Field	Details
LastDisplayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the date the in-app guidance was last displayed to the user.</p>
LastResult	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the last user interaction. Valid values are <code>Error</code>, <code>NotSeen</code>, <code>NoAction</code>, <code>Dismiss</code>, <code>Finish</code> (walkthroughs only), and <code>CustomAction</code>.</p>
LastResultDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the date the in-app guidance was last interacted with.</p>
Name	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the in-app guidance.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner.</p>
PromptVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the PromptVersion object.</p>
StepCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the total number of steps in the walkthrough. Available in API version 49.0 and later.</p>
StepNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10. Available in API version 49.0 and later.</p>
TimesActionTaken	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of times that the user took action on the in-app guidance.</p>

Field	Details
TimesDismissed	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of times that the user dismissed the in-app guidance.</p>
TimesDisplayed	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of times that the in-app guidance was displayed to the user.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user.</p>

## Associated Objects

This object has the following associated objects. They are available in API version 46.0 and later.

### [PromptActionOwnerSharingRule](#)

Sharing rules are available for the object.

### [PromptActionShare](#)

Sharing is available for the object.

## PromptActionOwnerSharingRule

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Fields

Field	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the access level of users for in-app guidance. Valid values are Read, and Edit.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the in-app guidance. Maximum of 255 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the group whose <code>PromptAction</code> are shared.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the in-app guidance.</p>
UserOrGroupID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user or group with whom <code>PromptAction</code> access is shared.</p>

## PromptActionShare

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Fields

Field	Details
AccessLevel	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the access level of users for in-app guidance. Valid values are <code>Read</code>, <code>Edit</code>, and <code>All</code>.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the parent.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists. You can only write to this field when its value is either omitted or set to <code>Manual</code> (default). There are many possible values, including:</p> <ul style="list-style-type: none"> <li>• <code>Rule</code>—The User or Group has access via a Contact sharing rule.</li> <li>• <code>ImplicitChild</code>—The User or Group has access to the Contact via sharing access on the associated Account.</li> <li>• <code>Manual</code>—The User or Group has access because a User with “All” access manually shared the Contact with them.</li> <li>• <code>Owner</code>—The User is the owner of the Contact.</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the User or Group.</p>

## PromptLocalization

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile or permission that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

If the package includes walkthroughs for standard apps that are part of an org, the walkthroughs are installed, but they aren't visible to users without the org subscribing to myTrailhead or starting a 30-day trial. However, orgs that don't subscribe to myTrailhead or start a trial can show users walkthroughs from packages that have a walkthrough on at least one custom app page.

Walkthroughs can be only included in unmanaged packages, or in security-reviewed, first-generation managed packages.

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

## Fields

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates the language used in the org where the in-app guidance was created.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the in-app guidance.</p>
Value	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Sort, Update</p> <p><b>Description</b></p> <p>The actual translated record details for the in-app guidance.</p>

## PromptVersion

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile or permission that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

If the package includes walkthroughs for standard apps that are part of an org, the walkthroughs are installed, but they aren't visible to users without the org subscribing to myTrailhead or starting a 30-day trial. However, orgs that don't subscribe to myTrailhead or start a trial can show users walkthroughs from packages that have a walkthrough on at least one custom app page.

Walkthroughs can be only included in unmanaged packages, or in security-reviewed, first-generation managed packages.

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

## Fields

Field	Details
<code>ActionButtonLabel</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Label for the action button. Maximum of 25 characters. For walkthroughs, this field can only be specified on the last step.</p>
<code>ActionButtonLink</code>	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> URL for the action button. Maximum of 1,000 characters. You can't use the <code>GROUP BY</code> option in a SOQL query for this field. For walkthroughs, this field can only be specified on the last step.</p>

Field	Details
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> Body content. For floating prompts, there's a maximum of 240 characters. For docked prompts, there's a maximum of 4000 characters. However, docked prompts use a rich text editor, so the maximum refers to the HTML markup, not the readable text.</p>
DelayDays	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of days between occurrences. For walkthroughs, this field can only be specified on the first step.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the in-app guidance.. Maximum of 255 characters.</p>
DismissButtonLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Label for the dismiss button of a floating prompt. Maximum of 15 characters.</p>
DisplayPosition	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the position of the floating prompt on the page. Valid values are:</p> <ul style="list-style-type: none"><li>• TopLeft</li><li>• TopCenter</li><li>• TopRight</li><li>• BottomLeft</li></ul>

Field	Details
	<ul style="list-style-type: none"> <li>• BottomCenter</li> <li>• BottomRight</li> </ul>
DisplayType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the type of prompt. Valid values are:</p> <ul style="list-style-type: none"> <li>• DockedComposer, which is the docked prompt</li> <li>• FloatingPanel, which is the floating prompt</li> </ul>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the date to stop showing the in-app guidance. For walkthroughs, this field can only be specified on the first step.</p>
Header	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Label for the header of the docked prompt. This is the label contained in the window's browser bar. Maximum of 36 characters.</p>
IndexWithIsPublished	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup, Nillable, Sort</p> <p><b>Description</b> Used by Salesforce for efficient querying.</p>
IndexWithoutIsPublished	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup, Nillable, Sort</p> <p><b>Description</b> Used by Salesforce for efficient querying.</p>

Field	Details
IsPublished	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates if the in-app guidance is active <code>yes</code> or not <code>no</code>.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label. Maximum of 80 characters.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the in-app guidance.</p>
PublishedByUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the user who activated the in-app guidance. If the in-app guidance is part of a package, this is the user who installed the package.</p>
PublishedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the date the in-app guidance was activated. If the in-app guidance is part of a package, this is the date when the package was installed. For walkthroughs, this field can only be specified on the first step.</p>
ShouldDisplayActionButton	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b> Indicates if an action button or link is included in the in-app guidance <code>yes</code> or not <code>no</code>.</p>
ShouldIgnoreGlobalDelay	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates if the prompt ignores the global time delay between in-app guidance and instead shows on page load <code>yes</code> or not <code>no</code>. The default is <code>no</code>.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the date to start showing. For walkthroughs, this field can only be specified on the first step.</p>
StepNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10.</p>
TargetAppDeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The app's developer name where the in-app guidance appears.</p>
TargetAppNamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The app's namespace prefix where the in-app guidance appears. Maximum of 15 characters.</p>

Field	Details
TargetPageKey1	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Used by Salesforce to identify the page location along with <code>targetPageKey2</code> and <code>targetPageType</code>.</p>
TargetPageKey2	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Used by Salesforce to identify the page location along with <code>targetPageKey1</code> and <code>targetPageType</code>.</p>
TargetPageType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The type of page where the in-app guidance appears.</p>
TimesToDisplay	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Maximum number of times to display the in-app guidance (that is, the number of occurrences). Salesforce detects if the user interacts with (or ignores) the in-app guidance to determine if we should show the in-app guidance again or cancel scheduled recurrences. This may run counter to the number of occurrences scheduled. Maximum value of 30. For walkthroughs, this field can only be specified on the first step.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label for the title of the in-app guidance.. Maximum of 36 characters.</p>

Field	Details
UserAccess	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates which permissions can see the in-app guidance. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Everyone</code>, which indicates that there's no restrictions on who can see</li> <li>• <code>SpecificPermissions</code>, which indicates that only users with all the specific user permissions specified can see the in-app guidance</li> </ul>
UserProfileAccess	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates which profiles can see the in-app guidance. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Everyone</code>, which indicates that there's no permission restrictions on who can see</li> <li>• <code>SpecificProfiles</code>, which indicates that users with any of the specific user profiles specified can see the in-app guidance</li> </ul>
VersionNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The number remains 1 since multiple versions aren't saved in the org.</p>
VideoLink	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> URL for the video in a docked prompt. Maximum of 1,000 characters. To find the embed code for a video, follow the instructions from the video host website. Usually the steps can be found by searching for the name of the website and "embed video." For example, here's what the embed code looks like for YouTube:</p> <pre>&lt;iframe width="560" height="315" src="https://www.youtube.com/embed/Ko-gcObzTVo" frameborder="0" allow="accelerometer; autoplay; encrypted-media; gyroscope; picture-in-picture" allowfullscreen&gt;&lt;/iframe&gt;</pre>

Field	Details
	Then, you would enter the URL found in the src attribute. For the example used, enter <code>https://www.youtube.com/embed/Ko-gcObzTVo</code> .

## PromptVersionLocalization

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completes.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts and Modify Metadata Through Metadata API Functions user permission. Everyone can see the In-App Guidance setup page. To show walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The myTrailhead subscription includes this feature. For pricing details, contact your Salesforce account executive.

## Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile or permission that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

If the package includes walkthroughs for standard apps that are part of an org, the walkthroughs are installed, but they aren't visible to users without the org subscribing to myTrailhead or starting a 30-day trial. However, orgs that don't subscribe to myTrailhead or start a trial can show users walkthroughs from packages that have a walkthrough on at least one custom app page.

Walkthroughs can be only included in unmanaged packages, or in security-reviewed, first-generation managed packages.

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

## Fields

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates the language used in the org where the in-app guidance was created.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the in-app guidance.</p>
Value	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The actual translated label of the in-app guidance.</p>

## Reference: PushTopic

---

Represents a query that is the basis for notifying listeners of changes to records in an org. Available with API version 21.0 and later.

### Supported Calls

REST: DELETE, GET, PATCH, POST (query requests are specified in the URI)

SOAP: `create()`, `delete()`, `describe()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

### Special Access Rules

- This object is only available if Streaming API is enabled for your org.
- Only users with the Create permission can create this record.

### Fields

Field	Field Type	Description
<code>ApiVersion</code>	double	Required. API version to use for executing the query specified in <code>Query</code> . It must be an API version greater than 20.0. If your query applies to a custom object from a package, this value must match the package's <code>ApiVersion</code> .  Example value: <b>Field Properties:</b> Create, Filter, Sort, Update
<code>Description</code>	string	Description of the PushTopic. Limit: 400 characters <b>Field Properties:</b> Create, Filter, Sort, Update
<code>ID</code>	ID	System field: Globally unique string that identifies a record. <b>Field Properties:</b> Default on create, Filter, Group, idLookup, Sort
<code>isActive</code>	boolean	Indicates whether the record currently counts towards the organization's allocation. <b>Field Properties:</b> Create, Default on create, Filter, Group, Sort, Update
<code>IsDeleted</code>	boolean	System field: Indicates whether the record has been moved to the Recycle Bin ( <code>true</code> ) or not ( <code>false</code> ). <b>Field Properties:</b> Default on create, Filter, Group, Sort
<code>Name</code>	string	Required. Descriptive name of the PushTopic, such as <code>MyNewCases</code> or <code>TeamUpdatedContacts</code> . Limit: 25 characters. This value identifies the channel and must be unique. <b>Field Properties:</b> Create, Filter, Group, Sort, Update

Field	Field Type	Description
<code>NotifyForFields</code>	picklist	<p>Specifies which fields are evaluated to generate a notification.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• All</li> <li>• Referenced (default)</li> <li>• Select</li> <li>• Where</li> </ul> <p><b>Field Properties:</b> Create, Filter, Sort, Update</p>
<code>NotifyForOperations</code>	picklist	<p>Specifies which record events may generate a notification.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• All (default)</li> <li>• Create</li> <li>• Extended</li> <li>• Update</li> </ul> <p><b>Field Properties for API version 28.0 and earlier:</b> Create, Filter, Sort, Update</p> <p><b>Field Properties for API version 29.0 and later:</b> Filter, Sort</p> <p>In API version 29.0 and later, this field is read-only, and will not contain information about delete and undelete events. Use <code>NotifyForOperationCreate</code>, <code>NotifyForOperationDelete</code>, <code>NotifyForOperationUndelete</code> and <code>NotifyForOperationUpdate</code> to specify which record events should generate a notification.</p> <p>A value of <code>Extended</code> means that neither create or update operations are set to generate events.</p>
<code>NotifyForOperationCreate</code>	boolean	<code>true</code> if a create operation should generate a notification, otherwise, <code>false</code> . Defaults to <code>true</code> . This field is available in API version 29.0 and later.
<code>NotifyForOperationDelete</code>	boolean	<code>true</code> if a delete operation should generate a notification, otherwise, <code>false</code> . Defaults to <code>true</code> . Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
<code>NotifyForOperationUndelete</code>	boolean	<code>true</code> if an undelete operation should generate a notification, otherwise, <code>false</code> . Defaults to <code>true</code> . Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
<code>NotifyForOperationUpdate</code>	boolean	<code>true</code> if an update operation should generate a notification, otherwise, <code>false</code> . Defaults to <code>true</code> . This field is available in API version 29.0 and later.
<code>Query</code>	string	<p>Required. The SOQL query statement that determines which record changes trigger events to be sent to the channel.</p> <p>Limit: 1,300 characters</p>

Field	Field Type	Description
<b>Field Properties:</b> Create, Filter, Sort, Update		

## PushTopic and Notifications

The PushTopic defines when notifications are generated in the channel. This is specified by configuring the following PushTopic fields:

- PushTopic Queries
- Events
- Notifications

## QueueRoutingConfig

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

### Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

### Fields

Field	Details
CapacityPercentage	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel.</p> <p>For example, you might give phone calls a capacity percentage of <i>100</i>. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%.</p> <p>This field is available in API version 33.0 and later.</p>
CapacityWeight	<p><b>Type</b> double</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The amount of an agent's capacity for work items that's consumed by a work item from this service channel.</p> <p>For example, if an agent has a capacity of 6, and cases are assigned a capacity weight of 2, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items.</p> <p>This field is available in API version 33.0 and later.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
DropAdditionalSkillsTimeout	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group Nillable, Sort, Update</p> <p><b>Description</b> The number of seconds to wait before a skill marked as <b>Additional Skill</b> is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
IsAttributeBased	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether this routing is attribute-based. Available in API version 45.0 and later.</p>

Field	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the presence status.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label of the presence status.</p>
OverflowAssigneeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the user or queue that's set as the Overflow Assignee.</p>
PushTimeout	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The number of seconds set for push timeout. <b>0</b> is returned when push timeout isn't enabled. Available in API version 36.0 and later.</p>
RoutingModel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The routing type that determines how work items are routed (pushed) to agents. Possible values are <code>Least Active</code> and <code>Most Available</code>.</p>
RoutingPriority	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The priority in which work items from the service channels that are related to this routing configuration are routed to agents. Work items from routing configurations that have lower priority values (for example, 0) are routed to agents first.</p>
ServiceChannelId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the service channel that's associated with this configuration. This field is available in API version 32.0 and earlier.</p>

## Question

Represents a question in a community that users can view and reply to.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
BestReplyId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the Reply that has been identified as the best answer to the question. You must use the user interface to identify the best answer for a question.</p>
BestReplySelectedById	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the User who selected the best answer to the question.</p>

Field	Details
	<p>This field is available in API version 24.0 and later. In API version 24.0 through version 29.0, you must update this field using the UI. In API version and later, you can update this field using the API.</p>
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the question.</p>
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The zone ID associated with the question. Once you create a question, you can't change the zone ID associated with that question.</p>
CreatorFullPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorSmallPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
HasSingleFieldForContent	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Indicates whether the content of a Chatter Answers question is:</p> <ul style="list-style-type: none"> <li>• Included in only one field: <code>Title</code> if the content is unformatted and less than 255 characters; or <code>Body</code> if the content is formatted or more than 255 characters (<code>true</code>)</li> <li>• Included in two fields: <code>Title</code> and <code>Body</code> (<code>false</code>)</li> </ul> <p>This field also determines if content displays in one or two fields in Chatter Answers question feeds.</p> <p>This field is available in API version 25.0 and later.</p>
LastReferencedDate	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastReplyDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date and time the last reply (child Reply object) was posted.</p>
LastReplyId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Read only. The ID of the last reply (child Reply object) posted to the question.</p>
LastViewedDate	<p><b>Type</b></p> <p>date</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
<code>MostReportAbusesOnReply</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The most number of user-reported abuses on a Reply associated with the question. This field is available in API version 24.0 and later.</p>
<code>NumReplies</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of replies (child Reply object) that users have submitted for the question.</p>
<code>NumReportAbuses</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the number of user-reported abuses on the question. This field is available in API version 24.0 and later.</p>
<code>NumSubscriptions</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the number of users following the question. This field is available in API version 24.0 and later.</p>
<code>Origin</code>	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The source of the question, such as <code>Chatter Answers</code>.  This field is available in API version 24.0 and later.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The descriptive title of the question.</p>
UpVotes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of up votes for the question.</p>
VoteScore	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The internal score of the question, used to sort questions and articles on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface.</p> <p> <b>Note:</b> Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>

## Usage

Use this object to track questions in a zone.

## QuestionDataCategorySelection

A data category selection represents a data category that classifies a question.

This object can be used to associate a question with a data category from a data category group or to query the categorization for a question.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To create, read or update data category selection, you must have create, read or update permission on the categorized question. Users who can update question can also delete its category selection. Users who can create questions can only select categories visible to their role.

## Fields

Field Name	Details
DataCategoryGroupName	<p><b>Type</b>  <a href="#">DataCategoryGroupReference</a></p> <p><b>Properties</b>            Create</p> <p><b>Description</b>            Unique name of the data category group which has a category associated with the question.</p>
DataCategoryName	<p><b>Type</b>  <a href="#">DataCategoryGroupReference</a></p> <p><b>Properties</b>            Create</p> <p><b>Description</b>            Unique name of the data category associated with the question.</p>
ParentId	<p><b>Type</b>            reference</p> <p><b>Properties</b>            Create, Filter</p> <p><b>Description</b>            ID of the question associated with the data category selection.</p>

## Usage

Every question can be categorized in a data category. You can use the QuestionDataCategorySelection object to query and manage question categorization. Client applications can create categorization for a question. They can also delete, query, and retrieve question categorization.

 **Warning:** Even though the API lets you select more than one category for QuestionDataCategorySelection, the Answers tab only supports one data category selection for questions. Selecting multiple categories through QuestionDataCategorySelection may result in unexpected behavior in the Answers tab, such as losing your multiple selections. You should only select one data category when using QuestionDataCategorySelection.

## Sample Code—Java

In the following example, the `selectCategory` method adds a category to a question data category selection. The `retrieveCategorySelections` method returns all the categories from a question data category selection.

```
public void selectCategory(ID parentId, String categoryGroupName, String categoryName) {
    try {
        QuestionDataCategorySelection categorySelection = new
QuestionDataCategorySelection();

        categorySelection.setParentId(parentId);
        categorySelection.setDataCategoryGroupName(categoryGroupName);
        categorySelection.setDataCategoryName(categoryName);
        binding.create(new SObject[]{categorySelection});
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }
}

public String[] retrieveCategorySelections(String parentId) {
    QueryResult qr = null;

    try {
        qr = binding.query("SELECT DataCategoryName FROM QuestionDataCategorySelection
WHERE Id = '" + parentId + "'");
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }

    String[] categoryNames = new String[qr.getRecords().length];
    for (int index = 0; index < qr.getRecords().length; index++) {
        categoryNames[index] =
((QuestionDataCategorySelection)qr.getRecords()[index]).getDataCategoryName();
    }

    return categoryNames;
}
```

Salesforce Knowledge uses a similar object for article data category selection. See [Article Type\\_\\_DataCategorySelection](#) for SOQL examples using this object.

SEE ALSO:

[Article Type\\_\\_DataCategorySelection](#)

## QuestionReportAbuse

---

Represents a user-reported abuse on a Question in a Chatter Answers community. This object is available in API version 24.0 and later.

### Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the Question from which the user reported abuse.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Question from which the user reported abuse.</p>
Reason	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The reason the user reported abuse on the Question, such as <code>Spam</code>, <code>Hateful</code>, or <code>Inappropriate</code>.</p>

### Usage

Use this object to track user-reported abuse on questions created in a Chatter Answers community.

## QuestionSubscription

---

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required. ID of the zone associated with the Question the user is following. This field can't be updated.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The name of the question subscription.</p>
QuestionCreatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Required. Creation date of the Question which the user is following. This field can't be updated.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. ID of the Question which the user is following. This field can't be updated.</p>
SubscriberId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Required. ID of the User who is following the Question. This field can't be updated.</p>

## Usage

Things to consider when following a Question:

- A user can only follow questions that they have permission to view.
- Administrators and users with the “Modify All Data” permission can configure other users to follow questions that the other user has read access to.
- Administrators and users with the “Modify All Data” permission can configure users to stop following questions.

Queries on QuestionSubscription:

- Users with the “Read” permission on Question can see which questions other users are following.
- A query must include a LIMIT clause and the limit can't exceed 1,000.
- A query using a WHERE clause can only filter by fields on Question.

## QueueSubject

Represents the mapping between a queue Group and the sObject types associated with the queue, including custom objects.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

A queue is a Group whose Type is Queue. To create a Group, you must have the Manage Users permission.

## Fields

Field	Details
QueueId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of a queue.</p>
SubjectType	<p><b>Type</b></p> <p>picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> A list of object types that can be associated with the queue specified by the <code>QueueId</code>.</p>

## Usage

Use this object to associate a queue with the sObject that can be associated with the queue, including custom objects.

SEE ALSO:

[Object Basics](#)

## QuickText

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Category	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A customizable picklist that can be used to group multiple related quick text records together</p>
Channel	<p><b>Type</b> multipicklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Update</p> <p><b>Description</b> A multi-select picklist that can be used to specify where specific quick text messages are available, such as in Chat or in the Email publisher in Case Feed.</p>

Field Name	Details
FolderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Returns the ID of the folder that contains the quick text. Available in API version 44.0 and later.</p>
FolderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Name of the folder that contains the quick text. Available in API version 44.0 and later.</p>
IsInsertable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> (Used with Einstein Reply Recommendations.) Indicates whether agents can access the quick text in supported channels. The label in the UI is <b>Include in selected channels</b>.</p>
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>

Field Name	Details
Message	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter (unavailable in API version 25.0 and later), Sort (unavailable in API version 25.0 and later), Update</p> <p><b>Description</b> The content of the quick text record</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter (unavailable in API version 25.0 and later), Group, idLookup, Sort (unavailable in API version 25.0 and later), Update</p> <p><b>Description</b> A descriptive label for the quick text record</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the <a href="#">User</a> or Queue that owns the quick text record</p>
ShouldPredictInRr	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> (Used with Einstein Reply Recommendations.) Indicates whether the quick text can be recommended to agents in the Einstein Replies console component. The label in the UI is <b>Include in reply recommendations</b>.</p>
SourceEntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> (Used with Einstein Reply Recommendations.) The corresponding ReplyText record that the quick text record was created from. This field is not available in the UI.</p>

Field Name	Details
SourceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> (Used with Einstein Reply Recommendations.) Indicates how the text was composed. This field is not available in the UI.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>EINSTEIN_GENERATED</b>—Text was generated by Einstein Reply Recommendations</li> <li>• <b>USER_EDITED</b>—Text was generated by Einstein Reply Recommendations, and then edited by a user</li> <li>• <b>USER_GENERATED</b>—User wrote the text</li> </ul>

## Usage

Use this object to create and manage the quick text messages available to users. You can categorize multiple quick text records into groups using the Category field. The Category field can also be a parent to multiple custom-dependent Picklist fields to create a hierarchical structure of categories.

QuickText is also used in Einstein Reply Recommendations, a feature that recommends stock replies for support agents to use in chats in the Lightning Service Console. During setup, Einstein Reply Recommendations scans past chats to generate a list of commonly used replies. Each generated reply is a ReplyText record. The admin then publishes, or converts, the replies to quick text, creating a corresponding QuickText record for each reply. Therefore, certain QuickText fields are used only on quick text records that originated as a ReplyText record.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### QuickTextHistory

History is available for tracked fields of the object.

### QuickTextOwnerSharingRule

Sharing rules are available for the object.

### QuickTextShare

Sharing is available for the object.

## QuickTextUsage

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

This object is always read-only.

## Fields

Field	Details
AppContext	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Context in which the quick text was used. Possible values are:</p> <ul style="list-style-type: none"> <li>• Aloha—Salesforce Classic</li> <li>• Lightning—Lightning Experience</li> <li>• Unknown</li> </ul>
Channel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The channel in which the quick text was used. Possible values are:</p> <ul style="list-style-type: none"> <li>• Email</li> <li>• Event</li> <li>• Generic</li> <li>• Internal</li> <li>• Knowledge</li> <li>• Live Agent</li> <li>• Messaging</li> <li>• Phone</li> <li>• Portal</li> <li>• Social</li> <li>• Task</li> </ul>
FolderId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the folder containing the quick text at the time it was used.</p>
LaunchSource	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> How the user started the quick text. Possible values are:</p> <ul style="list-style-type: none"> <li>• Floater</li> <li>• Keyboard shortcut</li> <li>• Macro</li> <li>• Toolbar</li> </ul>
LoggedTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time when the quick text was used.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Name of the quick text.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the group or user that owns the quick text.</p>
QuickTextID	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the quick text.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the user that used the quick text.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [QuickTextUsageOwnerSharingRule](#)

Sharing rules are available for the object.

### [QuickTextUsageShare](#)

Sharing is available for the object.

## Quote

The Quote object represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

Quotes can be created from and synced with opportunities, and emailed as PDFs to customers

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the account that's associated with the quote.</p>

Field	Details
AdditionalAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Compound form of the additional address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
AdditionalCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the quote's additional address. Up to 40 characters allowed.</p>
AdditionalCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country for the quote's additional address. Up to 80 characters allowed.</p>
AdditionalCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO country code for the quote's additional address.</p>
AdditionalLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>AdditionalLongitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
AdditionalLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Used with <code>AdditionalLatitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
<code>AdditionalName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name associated with the quote's additional address. Limited: 255 characters.</p>
<code>AdditionalPostalCode</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal Code for the quote's additional address.</p>
<code>AdditionalState</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the quote's additional address. Up to 80 characters allowed.</p>
<code>AdditionalStateCode</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO state code for the quote's additional address.</p>
<code>AdditionalStreet</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Sort, Update</p> <p><b>Description</b> Street name for the quote's additional address.</p>
<code>BillingAddress</code>	<p><b>Type</b> address</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Compound form of the billing address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
BillingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the quote's billing address. Up to 40 characters allowed.</p>
BillingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country for the quote's billing address. Up to 80 characters allowed.</p>
BillingCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO country code for the quote's billing address.</p>
BillingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
<code>BillingName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Entity that the quote is billed to.</p>
<code>BillingPostalCode</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal Code for the quote's billing address.</p>
<code>BillingState</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the quote's billing address. Up to 80 characters allowed.</p>
<code>BillingStateCode</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO state code for the quote's billing address.</p>
<code>BillingStreet</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street name for the quote's billing address.</p>
<code>CanCreateQuoteLineItems</code>	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Group</p> <p><b>Description</b> This field is not used.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the contact that's associated with the quote.</p>
ContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the contract that's associated with the quote.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Restricted picklist</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p> <p>If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the PricebookEntry objects that are associated with any quote line items it has.</p> <p>This value is copied from the related Opportunity and can't be changed.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Text description of the quote. Limit: 32,000 characters.</p>
Discount	<p><b>Type</b> percent</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Difference between the sum of the QuoteLineItem record's <code>Subtotal</code> and the sum of the QuoteLineItem record's <code>Discount</code> totals. Expressed as a percentage.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The email address of the contact who's associated with the quote.</p>
ExpirationDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The date when this quote is no longer valid.</p>
Fax	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The fax number for the contact who's associated with the quote.</p>
GrandTotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The total price of the quote plus shipping and taxes.</p>
IsSyncing	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the quote is syncing with an opportunity.</p>

Field	Details
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LineItemCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The number of line items on the quote.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, idLookup, Update</p> <p><b>Description</b> Required. Name for the quote. Limit: 225 characters.</p>
OpportunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID for the opportunity associated with the quote.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p>

Field	Details
	<p><b>Description</b> The phone number of the contact who's associated with the quote.</p>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> ID of the price book associated with the quote.</p>
QuoteNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> A system-generated number that identifies the quote.</p>
QuoteToAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Compound form of the quote to address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
QuoteToCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the address to send the quote to for approval, such as a third party-agency representing a buyer. Up to 40 characters allowed.</p>
QuoteToCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country for the address to send the quote to for approval. Up to 80 characters allowed.</p>

Field	Details
QuoteToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>QuoteToLongitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between <math>-90</math> and <math>90</math> with up to 15 decimal places.</p>
QuoteToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>QuoteToLatitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between <math>-180</math> and <math>180</math> with up to 15 decimal places.</p>
QuoteToName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The name of the entity (such as a person or business) that the quote is sent to for approval. Limit: 255 characters.</p>
QuoteToPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Postal code for the address to send the quote to for approval.</p>
QuoteToState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the address to send the quote to for approval. Up to 80 characters allowed.</p>

Field	Details
QuoteToStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street name for the address to send the quote to for approval.</p>
RecordTypeID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> ID of the record type assigned to the object.</p>
ShippingAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Compound form of the shipping address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
ShippingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> City for the quote's shipping address. Up to 40 characters allowed.</p>
ShippingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Country for the quote's shipping address. Up to 80 characters allowed.</p>
ShippingCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<b>Description</b> ISO country code for the quote's shipping address.
ShippingHandling	<b>Type</b> currency <b>Properties</b> Create, Filter, Nillable, Update <b>Description</b> The total shipping and handling costs for the quote.
ShippingLatitude	<b>Type</b> double <b>Properties</b> Create, Filter, Nillable, Sort, Update <b>Description</b> Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between $-90$ and $90$ with up to 15 decimal places.
ShippingLongitude	<b>Type</b> double <b>Properties</b> Create, Filter, Nillable, Sort, Update <b>Description</b> Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between $-180$ and $180$ with up to 15 decimal places.
ShippingName	<b>Type</b> string <b>Properties</b> Create, Filter, Nillable, Update <b>Description</b> The name of the entity (such as a person or business) that the quote is sent to for approval.
ShippingPostalCode	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Postal code for the quote's shipping address.

Field	Details
ShippingState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> State for the quote's shipping address. Up to 80 characters allowed.</p>
ShippingStateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ISO state code for the quote's shipping address.</p>
ShippingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Street name for the quote's shipping address.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Update</p> <p><b>Description</b> The status of the quote. The standard options are:</p> <ul style="list-style-type: none"> <li>• —None—</li> <li>• Draft</li> <li>• Needs Review</li> <li>• In Review</li> <li>• Approved</li> <li>• Rejected</li> <li>• Presented</li> <li>• Accepted</li> <li>• Denied</li> </ul>
Subtotal	<p><b>Type</b> currency</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The sum of sales price multiplied by quantity for line items, not including the discount.</p>
Tax	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The total taxes for the quote.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The total of the quote line items after discounts and before taxes and shipping.</p>

## Usage

Use Quote to manage proposed product prices for customers. To update a Quote, your client application needs "Edit" permission.

- Client applications can create, update, delete, and query Attachment records associated with a quote via the API.
- You can sync a quote and its parent Opportunity.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**QuoteFeed (API version 39.0)**

Feed tracking is available for the object.

**QuoteOwnerSharingRule (API version 41.0)**

Sharing rules are available for the object.

**QuoteShare (API version 41.0)**

Sharing is available for the object.

# QuoteDocument

---

Represents a quote in document format. Available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

Field	Details
ContentVersionDocumentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID for the document's version.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Restricted picklist</p> <p><b>Description</b> Available only for organizations with the multicurrency feature enabled.  Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the <code>PricebookEntry</code> objects that are associated with any quote line items it has.</p>
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The discount for the quote used in the document.</p>
Document	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Nillable</p>

Field	Details
	<p><b>Description</b> The binary data of the document stored in the QuoteDocument object.</p>
GrandTotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Grand total for the quote used in the document.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup, Sort</p> <p><b>Description</b> Name of the quote document.</p>
QuoteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, GroupSort</p> <p><b>Description</b> ID for the quote used for the document.</p>

## Usage

Use the QuoteDocument object to store a document that can be used to present the quote information to the customer.

SEE ALSO:

[Quote](#)

[QuoteLineItem](#)

## QuoteLineItem

The QuoteLineItem object represents a quote line item, which is a member of the list of Product2 products associated with a Quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The user must have “Edit” permissions on Quote records in order to create or update quote line items on a quote. The user must have “Edit” permissions on Quote records to delete a quote line item.

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Available only for organizations enabled for multiples currencies. Contains the ISO code for any currency allowed by the organization.</p> <p>If the organization has multicurrency and a Pricebook2 is specified on the quote (the <code>Pricebook2Id</code> field is not blank), then the currency value of this field must match the currency of the PricebookEntry objects for any associated quote line items.</p> <p>This value is copied from the related Quote and can't be changed.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Text description of the line item. Limit: 225 characters.</p>
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Editable number from 0 to 100.</p>
Division	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as “North America,” “Healthcare,” or “Consulting.” Available only if the organization has the Division permission enabled.</p>

Field	Details
HasQuantitySchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a quantity schedule.</p>
HasRevenueSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a revenue schedule. If this object has a revenue schedule, the <code>GrandTotal</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. The system ignores any attempt to update this field. The update isn't rejected but the updated value is ignored.</p>
HasSchedule	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Indicates whether the line item uses schedules.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The most recent date on which a user referenced this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The most recent date on which a user viewed this record.</p>

Field	Details
LineNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Read-only. Automatically generated number identifying the quote line item. In the form of QL-XXXXXX.</p>
ListPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read-only. Corresponds to the <code>UnitPrice</code> on the <code>PricebookEntry</code> that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.</p>
OpportunityLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the related opportunity line item. This field is populated by the API during creation of the quote line item. Not editable. Available in API version 40.0 and later.</p>
PricebookEntryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the associated <code>PricebookEntry</code>. Exists only for orgs with Products enabled. In API 38.0 and earlier, if <code>Product2Id</code> is populated with <code>PricebookEntryId</code> data, you receive an error message. In API 39.0 and later, <code>Product2Id</code> is made null, and <code>PricebookEntryId</code> is populated with the <code>PricebookEntryId</code> data.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> Required. ID of the Product2 associated with this QuoteLineItem. In API 38.0 and earlier, if Product2Id is populated with PricebookEntryId data, you receive an error message. In API 39.0 and later, Product2Id is made null, and PricebookEntryId is populated with the PricebookEntryId data.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The number of units for the line item.</p>
QuoteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. ID of the associated Quote.</p>
ServiceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Date when the product revenue will be recognized and the product quantity will be shipped.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The value of where the line item is in the sorted order, such as 1, 2, and so on. The SortOrder value determines the order in which a quote line item displays in the Quote Line Items related list and the Quote PDF. Client applications can use this to match the sort order in Salesforce. This field is only available in API versions 21.0 and greater.</p>
Subtotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The line item's <code>Quantity</code> multiplied by the <code>UnitPrice</code>.</p>
<code>TotalPrice</code>	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Read-only. Calculated by applying the <code>Discount</code> to the <code>Subtotal</code>. This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update. To insert the <code>TotalPrice</code> for a quote line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the quote line item has a revenue schedule.</p>
<code>UnitPrice</code>	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Create, Filter, Sort, Update</p> <p><b>Description</b></p> <p>The price per unit for the quote line item.</p>

## Usage

A Quote record can have QuoteLineItem records only if the Quote has a Pricebook2. A QuoteLineItem must correspond to a Product2 that is listed in the quote's Pricebook2.

 **Note:** If the multicurrency option has been enabled, the `CurrencyIsoCode` field is present. It can't be modified, it is always set to the value of the `CurrencyIsoCode` of the parent Quote.

## Effects on Quotes

Quotes that have associated QuoteLineItem objects are affected in the following ways:

- Creating a QuoteLineItem increments the Quote value by the `TotalPrice` of the QuoteLineItem.
- When you create or update a QuoteLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the quote.

# RecentlyViewed

---

Represents records that the current user has recently viewed or referenced (by viewing a related record).

## Supported Calls

`query ()`, `update ()` `update ()`

## Special Usage Rules

The RecentlyViewed object does not support the Event, Task, Report, KnowledgeArticle, and Article objects.

## Fields

Field	Details
Alias	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The alias on the record.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The email address on the record.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The first name on the record. If the recently viewed record is a user, this is the user's first name.</p>
Id	<p><b>Type</b> ID</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> The ID of the recently viewed record.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the recently viewed record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the recently viewed record is a user.</p>
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The last name on the record.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name on the recently viewed record. If the recently viewed record is a user, contact, or lead, the value is a concatenation of the <code>firstname</code> and <code>lastname</code> field values.</p>

Field	Details
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the community that this group is part of. This field is available only if Salesforce Communities is enabled in your organization.</p> <p>You can add a <code>NetworkId</code> only when creating a group. You can't change or add a <code>NetworkId</code> for an existing group. This field is available in API version 27.0 and later.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The phone number on the record.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the recently viewed record is a user, this is the user's profile ID.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the recently viewed record is a user, this is the title of the user; for example CFO or CEO.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted, picklistSort</p> <p><b>Description</b> The sObject type for this recently viewed record. Valid values include any standard or custom objects that RecentlyViewed supports.</p>
UserRoleId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user role associated with this object.</p>

## Usage

This object provides a heterogeneous list of different object types and consists of recently viewed records or records that were recently referenced (a related record was viewed). A record is considered viewed when the user sees the details associated with it, but not when the user sees it in a list with other records. Use this object to programmatically construct a list of recently viewed items specific to the current user, for example, on a custom user interface or for search auto-complete options. You can also retrieve a filtered list of records by object type (`Type`). The RecentlyViewed data is periodically truncated down to 200 records per object. RecentlyViewed data is retained for 90 days, after which it is removed on a periodic basis.

Use this query in your code to retrieve a list of all the records that were recently viewed. The results are ordered from most to least recent.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE LastViewedDate !=null
ORDER BY LastViewedDate DESC
```

Use this query to retrieve data that was either viewed or referenced, but only for a limited set of objects.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE Type IN ('Account', 'Contact', 'Plan__c')
ORDER BY LastViewedDate DESC
```

This query retrieves a list of all recently viewed contacts with contact-specific fields, such as the contact's account name, and the custom website field. Records are ordered from most to least recent.

```
SELECT Account.Name, Title, Email, Phone, Website__c
FROM Contact
WHERE LastViewedDate != NULL
ORDER BY LastViewedDate DESC
```

## Recommendation

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

You must have the Modify All Data or Manage Next Best Action Recommendations user permission to create and edit recommendations.

## Fields

Field	Details
AcceptanceLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label that appears as the accept option on the surfaced recommendation. Maximum size is 80 characters.</p>
ActionReference	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Flow referenced for this recommendation. Label is <b>Action</b>.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Text description of the recommendation. Maximum size is 255 characters.</p>
ImageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Image referenced by this recommendation. Label is <b>Image</b>.</p>
IsActionActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the flow referenced in the Action field is active (true) or not (false). Read only.</p>

Field	Details
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the recommendation was last referenced.</p>
LastViewedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the recommendation was last viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the recommendation. Maximum size is 80 characters.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The community associated with the recommendation (if applicable).</p>
RejectionLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label that appears as the reject option on the surfaced recommendation. Maximum size is 80 characters.</p>

## RecordAction

---

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

 **Note:** Access to the RecordAction object is determined by a user's access to the associated parent record.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
ActionDefinition	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required in Lightning Flow for Service implementations that use version 44.0 or later of the API. The API name of the action to associate with the record; for example, the API name of a flow. Use this field rather than FlowDefinition. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.</p>
ActionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required in Lightning Flow for Service implementations that use version 46.0 or later of the API. The type of action. Possible values are:</p> <ul style="list-style-type: none"> <li>• Flow (default)</li> <li>• QuickAction</li> </ul> <p>For versions of the API prior to version 46.0, this field is set to Flow.</p>
FlowDefinition	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Optional in Lightning Flow for Service implementations using version 42.0 or 43.0 of the API. An upgrade to Winter '19 or later, which uses API version 44.0 or later, copies FlowDefinition to ActionDefinition. For versions 42.0 and 43.0, this field is the API name of the flow that's associated with the record.</p>

Field	Details
FlowInterviewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Optional. The flow interview ID of the paused or completed flow. This field can't be set in Process Builder.</p>
IsMandatory	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Optional. Specifies whether the action is mandatory. The default value is false.</p> <p> <b>Note:</b> At runtime, we show a reminder when the user closes a mandatory flow without completing it. We don't show the reminder for quick actions.</p>
IsUiRemoveHidden	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Optional. Specifies whether the ability to remove the action is hidden in the UI. The default value is false. If true, the UI hides the ability to remove the action. However, actions can still be deleted using the API.</p>
Order	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The order of the action among all actions associated with this record.</p>
Pinned	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. Specifies whether the action is pinned to the top or bottom of the component. If an action is pinned, users see the Remove option in the UI unless <code>IsUiRemoveHidden</code> is set to true. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• None (default)</li> <li>• Top</li> <li>• Bottom</li> </ul>
RecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. Record associated with the action. In version 46.0 and above, we support most object types. To learn about supported objects, see the <a href="#">Lightning Flow for Service Developer's Guide</a>.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The current state of the action. Possible values are:</p> <ul style="list-style-type: none"> <li>• New (default)</li> <li>• Paused</li> <li>• Complete</li> <li>• Started</li> <li>• Unlinked—The action was unlinked because the flow was paused and the current record for the flow interview changed.</li> </ul> <p>Paused and unlinked statuses do not apply to quick actions. This field can't be set in Process Builder.</p>

## Usage

The RecordAction object works with the Actions & Recommendations component in Lightning Experience. Although this junction object can be used to create relationships between records and actions in Salesforce Classic, those relationships can't be displayed in Salesforce Classic.

 **Note:** API version 44.0 added a field, ActionDefinition, so that a RecordAction in future releases can support other types of actions in addition to flows. API version 44.0 and later maintain the FlowDefinition field to support processes that reference this field in earlier API versions. Upgrading an org to Winter '19 or later, which uses API version 44.0 or later, copies the FlowDefinition field to the ActionDefinition field. FlowDefinition will be deprecated in a future release, so use ActionDefinition instead.

When an action is deleted that's referenced in an ActionDefinition or FlowDefinition, the RecordAction object is deleted. RecordAction objects are also deleted when the associated parent record is deleted, or when a flow is paused and the current record context has changed. When an action is completed, the associated RecordAction object is also deleted.

Deleted RecordActions are removed from the list when the page is refreshed.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#).

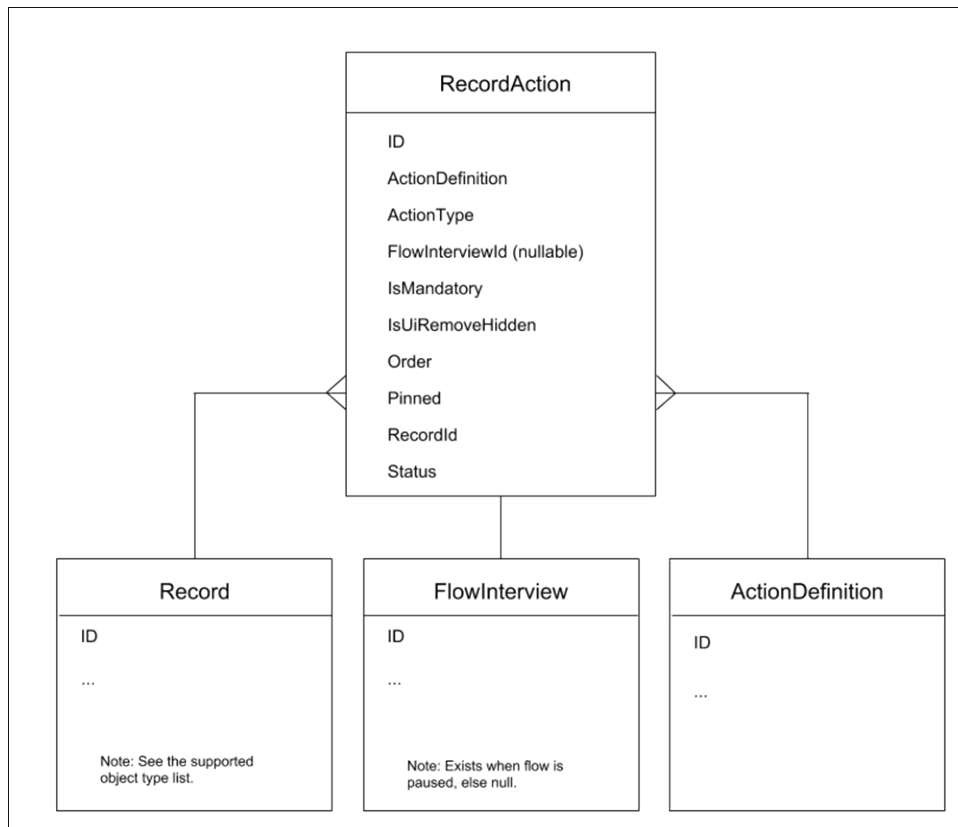

## Java Example

Here's an example of how to associate flows to a record using the RecordAction object.

```
public void associateNewCustomerFlowWithAccount (Account a) {
    try {
        RecordAction newRecordAction = new RecordAction();
        newRecordAction.setRecordId(a.getId());
        newRecordAction.setActionDefinition("New_Customer_Flow");
        newRecordAction.setOrder(1);

        SaveResult[] results = connection
            .create(new SObject[] { newRecordAction });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

## Data Model

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### RecordActionHistory

History is available for tracked fields of the object.

## RecordActionHistory

---

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is always read-only.

## Fields

Field	Details
ActionDefinitionApiName	<p><b>Type</b> string</p> <p><b>Description</b> Required. The API name of the action associated with the record. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.</p>
ActionDefinitionLabel	<p><b>Type</b> string</p> <p><b>Description</b> Required. The label of the action that took place.</p>
ActionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Restricted picklist</p> <p><b>Description</b> Required. The type of action associated with the record. Possible values are:</p> <ul style="list-style-type: none"> <li>Flow (default)</li> <li>QuickAction</li> </ul>

Field	Details
IsMandatory	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create</p> <p><b>Description</b> Optional. Specifies whether the action is mandatory. The default value is false.</p>
LoggedTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Required. The timestamp when the state change occurred.</p>
ParentRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Required. The parent record for the associated action.</p>
Pinned	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Nillable, Restricted picklist</p> <p><b>Description</b> Optional. Specifies whether the action is pinned to the top or bottom, or unpinned. Possible values are:</p> <ul style="list-style-type: none"><li>• None</li><li>• Top</li><li>• Bottom</li></ul>
RecordActionId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> Required. The ID of the RecordAction.</p>
State	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Restricted picklist</p> <p><b>Description</b> Required. The state of the action. A state change triggers the logging of a history event. Possible values are:</p> <ul style="list-style-type: none"> <li>• New (default)</li> <li>• Paused</li> <li>• Complete</li> <li>• Started</li> <li>• Unlinked—The action was unlinked because the flow was paused and the current record for the flow interview changed.</li> </ul>
UserId	<p><b>Type</b> reference</p> <p><b>Description</b> Required. The user that conducted the action.</p>

## Usage

The RecordActionHistory object represents the lifecycle of an action on a record as it goes through different states.

The RecordActionHistory object is a big object. For this reason, when you use synchronous SOQL, SOAP, REST, Bulk, or Apex APIs to read this object, queries must follow a specific pattern or they fail. Queries must match one of these patterns and use fields in this precise order when more than one field is used.

- ParentRecordId
- ParentRecordId, LoggedTime (DESC)
- ParentRecordId, LoggedTime (DESC), RecordActionId

For example, this SOQL query follows the ParentRecordId, LoggedTime (DESC) pattern.

```
SELECT ActionDefinitionApiName, User, State FROM RecordActionHistory WHERE
    ParentRecordId = {CaseId} ORDER BY ParentRecordId, LoggedTime DESC
```

Asynchronous SOQL queries do not need to follow a pattern, and can query any field.

Apex triggers cannot reference big object records. Use SOQL queries if you want to query RecordActionHistory records in Apex.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#). Learn more about big objects and how to query them in the [Query Big Objects](#) module on Trailhead.

## Java Example

Here's a Java example of how to query a RecordActionHistory object.

```
public void queryHBPOs(String parentRecordId) {
    try {
```

```

SimpleDateFormat format = new SimpleDateFormat("yyyy-MM-dd");

// query for the RecordActionHistory associated with ParentRecord
QueryResult queryResults = connection.query("SELECT ActionDefinitionApiName,
LoggedTime, State " +
    "FROM RecordActionHistory WHERE ParentRecordId = '" + parentRecordId + "' LIMIT
50");
if (queryResults.getSize() > 0) {
    for (int i=0;i<queryResults.getRecords().length;i++) {
        // cast the SObject to a strongly-typed RecordActionHistory
        RecordActionHistory raa = (RecordActionHistory)queryResults.getRecords()[i];
        System.out.println("ActionDefinitionApiName: " + raa.getActionDefinitionApiName()
+ " - LoggedTime: "+ format.format(raa.getLoggedTime().getTime()) + " - State: " +
            raa.getState());
    }
}
} catch (Exception e) {
    e.printStackTrace();
}
}

```

## RecordType

---

Represents a record type.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

**!** **Important:** Don't use record types as an access control mechanism. Profile assignment governs create and edit access for an object but doesn't govern read access. For example, a user assigned to a profile that isn't enabled for a particular record type can't create records with that record type, but can access records associated with that record type. Users with access to an object can read all record type information for that object. We strongly recommend against storing sensitive information in the record type description, name, or label. Instead, store sensitive information in a separate object or fields to which you've applied appropriate access controls.

Field	Details
BusinessProcessId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Required for Opportunity and Lead record types in API version 17.0 and later. ID of an associated BusinessProcess.</p>

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A description of this record. Limit: 255 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is <b>Record Type Name</b>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Only active record types can be applied to records. Label is <b>Active</b>.</p>
IsPersonType	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether this record has been designated as a person account (<code>true</code>) or not (<code>false</code>). Visible only if the organization has the person account feature enabled.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p><b>Description</b> Required. Label of the record type in the user interface. Limit: 80 characters. Label is <b>Record Type Label</b>.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Object to which this record type applies, including custom objects.</p>

## Usage

Use this object to offer different BusinessProcess records and subsets of picklist values to different users based on their Profile. Your client application can describe or query RecordType records.

The following objects have a `RecordTypeId` field:

- Account
- Campaign
- CampaignMember
- Case
- Contact
- Contract

- Lead
- Opportunity
- QuickText
- Solution
- Custom objects

Client applications can create or update values in `RecordTypeId` on these objects, specifying a valid record type ID associated with these objects.

 **Note:** You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

A client application can retrieve the list of valid record type IDs for a given object by querying the RecordType.

[Record Type Objects](#)

## RecordTypeLocalization

---

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

### Fields

Field	Details
Language	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Restricted picklist</p> <p><b>Description</b> The language for this translated label.</p>
NamespacePrefix	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable</p> <p><b>Description</b> The ID of the RecordType associated with the label that is being translated.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The actual translated label for the record type. Label is <b>Translation</b>.</p>

## Usage

Use this object to translate the labels of your record types into other supported languages.

## RecordVisibility (Pilot)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Special Access Rules

To access this object, you need an Einstein Analytics license or to contact Salesforce to participate in the pilot program. You must also have the “View All Data” or “Enable RecordVisibility API” user permission.

 **Note:** We provide the RecordVisibility object to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. The RecordVisibility object isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for the RecordVisibility object in the group in the [Trailblazer Community](#).

## Fields

Field Name	Details
<code>RecordId</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The ID of the record.</p>
<code>VisibilityAttribute</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The visibility attributes that determine the read access of a given record. For example, a user ID, parent record ID, or group ID.  The output of visibility attributes is in JSON format and must be deserialized.</p>

## Usage

Use this object to query the attributes that determine the visibility of one or more records. You can’t create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

This sample query returns the visibility attributes for the indicated record.

```
SELECT RecordId, VisibilityAttribute
FROM RecordVisibility
WHERE RecordId=[single ID] // or Record IN [list of IDs]
```

The `RecordId` and `VisibilityAttribute` fields must be a part of the fields that are being selected despite `RecordId` being used in the filter criteria as well.

`RecordVisibility` is a foreign key on the records. This query returns the visibility attributes for Account records:

```
SELECT Id, Name, RecordVisibility.VisibilityAttribute
FROM Account
```

You can't filter `RecordId` fields when using `RecordVisibility` as a lookup or foreign key.

You can use `RecordVisibilityContext` to filter `WITH` clauses in queries. For more information, see [WITH filteringExpression](#) in the *SOQL and SOSL Reference*.

## RedirectWhitelistUrl

Represents a whitelisted URL that users can navigate to without being shown a warning message. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to section title in the user interface. Limit: 80 characters.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Language of the label. Possible values are:</p> <ul style="list-style-type: none"> <li>• da—Danish</li> <li>• de—German</li> <li>• en_US—English</li> <li>• es—Spanish</li> <li>• es_MX—Spanish (Mexico)</li> <li>• fi—Finnish</li> <li>• fr—French</li> <li>• it—Italian</li> <li>• ja—Japanese</li> <li>• ko—Korean</li> <li>• nl_NL—Dutch</li> <li>• no—Norwegian</li> <li>• pt_BR—Portuguese (Brazil)</li> <li>• ru—Russian</li> <li>• sv—Swedish</li> <li>• th—Thai</li> <li>• zh_CN—Chinese (Simplified)</li> <li>• zh_TW—Chinese (Traditional)</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label of the whitelisted URL.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p>

Field	Details
	<p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
<code>Url</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The whitelisted URL.</p>

## Refund

Represents a refund made against a payment. This object is available in API version 48.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

## Fields

Field	Details
<code>AccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The customer account containing the payment that this refund targets.</p>

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Total amount of this refund.</p>
Balance	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Remaining balance following refund line applications. Equal to the Amount field – the Net Applied field.</p>
CancellationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date that the refund was canceled. This is a required parameter for void services.</p>
CancellationEffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date that the cancellation of this refund takes effect.</p>
CancellationGatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the cancellation transaction was processed in the payment gateway.</p>
CancellationGatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Unique ID for the cancellation transaction. Generated by the payment gateway.</p>
CancellationGatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code for the cancellation transaction. Generated by the payment gateway. Must be mapped to a Salesforce-specific result code.</p>
CancellationSfResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p>
ClientContext	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Three-letter ISO 4217 currency code associated with the payment group record.</p>

Field	Details
Date	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time that this refund was created.</p>
EffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Defines the date and time when the refund application becomes effective.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
GatewayDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date that a successful gateway communication caused the creation of this refund.</p>
GatewayRefNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unique transaction ID created by the payment gateway.</p>
GatewayResultCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>

Field	Details
GatewayResultCodeDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the GatewayResultCode. Useful for providing additional context as to why the gateway returned a specific result code.</p>
ImpactAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Shows the refund's financial impact against the customer's accounts receivable. Equals the refund's Amount field if the refund amount is valid. Equals 0 when the refund amount is void. Has a null value when the refund is canceled.</p>
IpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MacAddress	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
NetApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Equals the Total Applied field – the Total Unapplied field.</p>
OrderPaymentSummaryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Order payment summary record that shows the balances of each authorization, capture, and refund made against an order.</p>
PaymentGatewayId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The payment gateway used to process this refund.</p>
PaymentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The payment group for the payment being refunded.</p>
PaymentMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The payment method used to create the payment being refunded.</p>

Field	Details
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Fraud parameter.</p>
ProcessingMode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether the payment has been made outside of the payment platform. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>External</code>: Transactions happened outside of the Salesforce payments platform.</li> <li>• <code>Salesforce</code>: Salesforce made and recorded an external call to the payment gateway.</li> </ul>
RefundNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-created unique ID for this refund.</p>
SfResultCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Decline</code>: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.</li> <li>• <code>Indeterminate</code>: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway.</li> <li>• <code>PermanentFail</code>: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> <li>– <code>Hard Decline</code>: The customer's payment account has been closed or terminated.</li> <li>– <code>Fraud</code>: The gateway recognized the payment or payment method as known fraud.</li> </ul> </li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <b>RequiresReview:</b> The customer bank requires more information before completing the payment.</li> <li>• <b>Success:</b> The gateway call succeeded.</li> <li>• <b>SystemError:</b> Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.</li> <li>• <b>ValidationError:</b> Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.</li> </ul>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines the state of this refund. Possible values are:</p> <ul style="list-style-type: none"> <li>• <b>Canceled:</b> This refund has been voided and can no longer be allocated.</li> <li>• <b>Draft:</b> The refund can be edited before posting it and allocating it to a target.</li> <li>• <b>Processed:</b> This refund has been finalized and can be allocated against a target.</li> </ul> <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> <li>• Draft to Processed</li> <li>• Processed to Canceled</li> <li>• Draft to Canceled</li> </ul>
TotalApplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of Amount fields across all of this refund's applied refund lines.</p>
TotalUnapplied	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of Amount fields across all of this refund's unapplied refund lines.</p>
Type	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Defines how this refund is used.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>NonReferenced</code>: Standalone refund not linked to any payment.</li> <li>• <code>Referenced</code>: Refund made against a payment.</li> </ul>

## RefundLinePayment

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

### Fields

Field	Details
Amount	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> The total amount applied to or unapplied from a payment by the refund line.</p>
AppliedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The date that the refund was applied to the linked payment.</p>

Field	Details
AssociatedAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The account for the payment that received the refund.</p>
AssociatedRefundLinePaymentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The refundLine that was unapplied. Populated only when RefundLinePayment's Type has a value of Unapplied.</p>
Comments	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Users can add comments to provide additional information on the refund line payment.</p>
Date	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> By default, the day the refund line payment record was created. Users can also enter a different date.</p>
EffectiveDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> Defines the date and time when the refund line application or unapplication becomes effective.</p>
EffectiveImpactAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied. If there's an unapplied line related to this record, EffectivImpactAmount has a value of 0.</p> <p> <b>Note:</b> EffectivImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same refund.</p>
HasBeenUnapplied	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Shows whether this refund line has been unapplied.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>No</li> </ul>
ImpactAmount	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied.</p>
PaymentBalance	<p><b>Type</b></p> <p>currency</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The payment record's balance following the application or unapplication of this refund line.</p>
PaymentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The payment record that this refund line targets. Refund applications and unapplications are made against this payment.</p>

Field	Details
RefundBalance	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The refund record's balance following the application or unapplication of this payment refund line.</p>
RefundId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The parent refund of this refund line.</p>
RefundLinePaymentNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> System-created unique ID for this refund line.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Defines whether this line represents a refund that's been applied or unapplied from a payment. Possible values are:</p> <ul style="list-style-type: none"> <li>• Applied</li> </ul>
UnappliedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The date that this refund line was unapplied from a payment.</p>

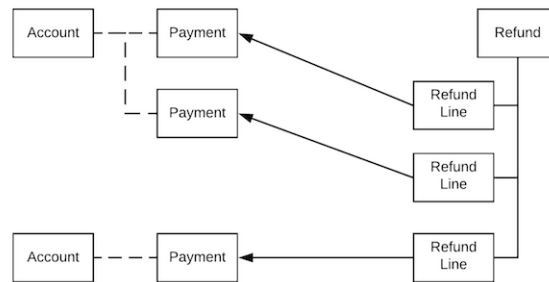

## Usage

When you're ready to apply a refund's balance to a payment, create a refund line (`RefundLinePayment`). The refund line represents the balance taken from the payment and applied toward the invoice. You can apply a refund's balance when you create the refund record or afterward. The refund line must have the same currency as the parent refund.

A refund has an amount, which represents the total amount taken from the refund, and a balance, which represents the remaining amount after the refund line has been applied to a payment. A refund's amount can't be less than the sum of all of its refund line amounts. You can apply any portion of a refund's balance to a payment.

You can apply a refund to transactions on the same account or to different transactions across different

accounts.

## RegisteredExternalService

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The `RegisteredExternalService` object is available only if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the external service developer.</p>

Field	Details
ExternalServiceProviderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique ID of the external service provider.</p>
ExternalServiceProviderType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The types of external service providers. Possible values are:</p> <ul style="list-style-type: none"> <li>• Inventory</li> <li>• Price</li> <li>• Shipment</li> <li>• Tax</li> </ul>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The supported languages. Possible values are:</p> <ul style="list-style-type: none"> <li>• da—Danish</li> <li>• de—German</li> <li>• en_US—English</li> <li>• es—Spanish</li> <li>• es_MX—Spanish (Mexico)</li> <li>• fi—Finnish</li> <li>• fr—French</li> <li>• it—Italian</li> <li>• ja—Japanese</li> <li>• ko—Korean</li> <li>• nl_NL—Dutch</li> <li>• no—Norwegian</li> <li>• pt_BR—Portuguese (Brazil)</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• ru—Russian</li> <li>• sv—Swedish</li> <li>• th—Thai</li> <li>• zh_CN—Chinese (Simplified)</li> <li>• zh_TW—Chinese (Traditional)</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label for the external service.</p>

## RemoteKeyCalloutEvent

The documentation has moved to [RemoteKeyCalloutEvent](#) in the *Platform Events Developer Guide*.

## Reply

Represents a reply that a user has submitted to a question in an answers community.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> Body of this reply.</p>
CommunityId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The zone ID associated with the question and its reply. This field is available in API version 27.0 and later.</p>
CreatorFullPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorSmallPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
DownVotes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of down votes for a reply.</p>
Name	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> When creating a Reply, the Name field is automatically populated with a truncated, plain text version of the Reply Body field.</p>
NumReportAbuses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the number of reported abuses on the reply by users.  This field is available in API version 24.0 and later.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the Question to which this reply was made.</p>
UpVotes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total number of up votes for a reply.</p>
VoteTotal	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The total number of all votes for a reply, including up and down votes.</p>

## Usage

Use this object to track replies to a Question.

## ReplyReportAbuse

---

Represents a user-reported abuse on a Reply in a Chatter Answers community. This object is available in API version 24.0 and later.

### Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the Reply from which the user reported abuse.</p>
Reason	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The reason the user reported abuse on the Reply, such as <code>Spam</code>, <code>Hateful</code>, or <code>Inappropriate</code>.</p>
ReplyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Reply from which the user reported abuse.</p>

### Usage

Use this object to track user-reported abuse on replies created in a Chatter Answers community.

### ReplyText

---

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

**Important:** Because the replies generated by Einstein are taken from closed chats with your customers, they may contain customer data. You can edit replies before they are recommended to agents.

## Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Eight-digit auto-generated number identifying the reply.</p>
RawTextMessage	<p><b>Type</b> textarea</p> <p><b>Properties</b></p> <p><b>Description</b> The text of the reply.</p>
Source	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Indicates who last modified the reply. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>EINSTEIN_GENERATED</code>—Reply was generated by Einstein and has not been edited.</li> <li>• <code>USER_EDITED</code>—Reply was generated by Einstein and then edited by a user.</li> <li>• <code>USER_GENERATED</code>—This value is not currently in use.</li> </ul>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the reply. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• <b>NEW</b>—Einstein has generated the reply and it hasn't yet been published.</li> <li>• <b>PUBLISHED</b>—The reply has been published to quick text. When the reply recommendation model is activated, the reply can be recommended to support agents.</li> <li>• <b>PUBLISH_FAILED</b>— An attempt to publish the reply to quick text failed. Publishing failure can be due to validation errors, access errors, or corrupted files. To hide the reply from the list of generated replies, delete it.</li> </ul>

## Usage

To get started with Einstein Reply Recommendations, create a predictive model that analyzes closed chats for frequently used text snippets. When the model is ready, Einstein generates a list of these snippets as ReplyText records for you to review and publish, or convert, to quick text. ReplyText records appear on the Einstein Reply Recommendations Setup page.

You can select one or more replies to publish at a time. If you publish a single reply, you can edit the reply text during publishing. If you publish multiple replies at once, you can edit each reply's text on the quick text page after publishing is complete. Replies aren't recommended to support agents until you activate your reply recommendation model.

When a reply is published, a corresponding [QuickText](#) record is created. During publishing, select a quick text folder to add the replies to and make sure that agents have access to the folder. To edit a reply after it is published, edit the related quick text record.

Einstein generates the list of replies only once, when your model finishes building. It's not possible to generate a new list.

## Report

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

## Fields

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The description of the report. Limit: 255 characters.</p>

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is <b>Report Unique Name</b>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
FolderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Name of the folder that contains the report. Available in API version 35.0 and later.</p>
Format	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Required. Indicates the format of the report. This field is available in API version 29.0 and later. Can have one of these values:</p> <ul style="list-style-type: none"> <li>• <b>Tabular</b> for reports in that format. In the application, the label is <code>Tabular</code>.</li> <li>• <b>Summary</b> for reports in that format. In the application, the label is <code>Summary</code>.</li> <li>• <b>Matrix</b> for reports in that format. In the application, the label is <code>Matrix</code>.</li> <li>• <b>Multiblock</b> for reports in joined format. In the application, the label is <code>Joined</code>.</li> </ul>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>

Field	Details
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastRunDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Returns the date the report was last run. Label is <b>Last Run</b>.</p>
LastViewedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Required. The report label used in the user interface.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><code>namespacePrefix__componentName</code></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This</li> </ul>

Field	Details
	<p>field's value is the namespace prefix of the Developer Edition org of the package developer.</p> <ul style="list-style-type: none"> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul> <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who currently owns this report.</p>

## Supported Query Scopes

Use these scopes to help specify the data your SOQL query returns.

### allPrivate

Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and [Enhanced Analytics Folder Sharing](#). If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

### created

Records created by the user running the query.

### everything

All records except records saved in other users' private folders.

### mine

Records saved in the private folder of the user running the query.

### organizationOwned

Records saved in Unfiled Public Reports. In Lightning Experience, the Unfiled Public Reports folder is called Public Reports.

## Usage

Use the report object to get report metadata. Query, search, or retrieve specific metadata on reports. Report object fields are read-only.

## Example: Reports with "Sales" in Their Name

This SOQL query returns reports that contain the name "Sales" and lists their developer names, format, ID, and report name.

```
SELECT DeveloperName,Format,Id,Name FROM Report WHERE Name LIKE '%Sales%'
```

## Example: Reports in an Inactive User's Private Folder

This SOQL query returns reports saved in a specific user's private folder.

```
SELECT Id FROM Report USING SCOPE allPrivate WHERE OwnerId = '005A0000000Bc2deFG'
```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ReportFeed

Feed tracking is available for the object.

SEE ALSO:

[ReportTag](#)

[Dashboard](#)

## ReportTag

---

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the tagged item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>

Field Name	Details
TagDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist</p> <p><b>Description</b> Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

ReportTag stores the relationship between its parent TagDefinition and the Report being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

[Report](#)

## ReputationLevel

Represents a reputation level defined for a community. This object is available in API version 32.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is available only if Salesforce Communities is enabled in your organization. Only users with permissions to create or manage a community can view the ReputationPointsRule records.

## Fields

Field Name	Details
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The label for the reputation level.</p>
LevelNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The rank of the reputation level.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the parent community (network) the reputation level applies to.</p>
Threshold	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The lower limit of reputation points associated with this reputation level. The maximum number of reputation points a user can accrue is 999,999,999,999,999.</p>

## ReputationLevelLocalization

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in communities. This object is available in API version 35.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is available only if Salesforce Communities is enabled in your organization and reputation is enabled in your community.

## Fields

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language the reputation level is translated into. The picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> <li>• Chinese (Simplified): zh_CN</li> <li>• Chinese (Traditional): zh_TW</li> <li>• Danish: da</li> <li>• Dutch: nl_NL</li> <li>• English: en_US</li> <li>• Finnish: fi</li> <li>• French: fr</li> <li>• German: de</li> <li>• Italian: it</li> <li>• Japanese: ja</li> <li>• Korean: ko</li> <li>• Norwegian: no</li> <li>• Portuguese (Brazil): pt_BR</li> <li>• Russian: ru</li> <li>• Spanish: es</li> <li>• Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.</li> <li>• Swedish: sv</li> <li>• Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.</li> </ul>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the reputation level this translated value applies to.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The translated text for the reputation level. Label is <b>Translation Text</b>.</p>

## ReputationPointsRule

Represents the reputation point rules for a community. Each rule specifies an action that community members can earn points from and the points associated with those actions in a particular community. This object is available in API version 32.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

This object is available only if Salesforce Communities is enabled in your organization. Only users with permissions to create or manage a community can view the ReputationPointsRule records.

## Fields

Field Name	Details
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the parent community (network) that the point rule applies to.</p>
Points	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The reputation points associated with the member action this rule is for. The maximum value this field can contain is 999,999.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The member action associated with this rule, limited to one of these actions:</p> <ul style="list-style-type: none"> <li>• Write a post (<code>FeedItemWriteAPost</code>)</li> <li>• Write a comment (<code>FeedItemWriteAComment</code>)</li> <li>• Receive a comment (<code>FeedItemReceiveAComment</code>)</li> <li>• Like something (<code>FeedItemLikeSomething</code>)</li> <li>• Receive a like (<code>FeedItemReceiveALike</code>)</li> <li>• Share a post (<code>FeedItemShareAPost</code>)</li> <li>• Someone shares your post (<code>FeedItemSomeoneSharesYourPost</code>)</li> <li>• Mention someone (<code>FeedItemMentionSomeone</code>)</li> <li>• Receive a mention (<code>FeedItemReceiveAMention</code>)</li> <li>• Ask a question (<code>FeedItemPostQuestion</code>)</li> <li>• Answer a question (<code>FeedItemAnswerAQuestion</code>)</li> <li>• Receive an answer (<code>FeedItemReceiveAnAnswer</code>)</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Mark an answer as best (<code>FeedItemMarkAnswerAsBest</code>)</li> <li>• Someone marks your answer as best (<code>FeedItemYourAnswerMarkedBest</code>)</li> <li>• Endorse someone for knowledge on a topic (<code>EndorseSomeoneForKnowledgeOnATopic</code>)</li> <li>• Someone endorses you for knowledge on a topic (<code>EndorsedForKnowledgeOnATopic</code>)</li> <li>• Upload a profile picture (<code>ProfilePhotoUpload</code>) This action is available in API version 45.0 and later.</li> </ul>

## ResourceAbsence

Represents a time period in which a service resource is unavailable to work in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
<code>AbsenceNumber</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) An auto-generated number identifying the absence.</p>
<code>Address</code>	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address associated with the absence.</p>

Field Name	Details
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the address associated with the absence. Maximum length is 40 characters.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the address associated with the absence. Maximum length is 80 characters.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the absence.</p>
End	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time when the absence ends.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> <b>Note:</b> This field is available in the API only.</p>

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource absence was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource absence was last viewed.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Postal Code	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The postal code of the address associated with the absence. Maximum length is 20 characters.</p>
ResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The absent service resource.</p>
Start	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time when the absence begins.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the address associated with the absence. Maximum length is 80 characters.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name of the address associated with the absence.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The type of absence: <i>Meeting, Training, Medical, or Vacation</i>. The default value is <i>Vacation</i>. You can add custom values if needed, but the name <i>Break</i> is reserved for the managed package.</p>

## Usage

Resource absences you define periods of time when a service resource is unavailable to work. Unless you're using the Field Service Lightning managed package, service resources can still be assigned to appointments that conflict with their absences.

**Tip:** Create a trigger that sends an approval request to a supervisor when a service resource creates an absence.

If you're not using the Field Service Lightning managed package, a calendar view isn't available for individual service resources.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ResourceAbsenceFeed

Feed tracking is available for the object.

### ResourceAbsenceHistory

History is available for tracked fields of the object.

## ResourcePreference

---

Represents an account's preference for a specified service resource on field service work.

Resource preferences indicate which service resources should be assigned to field service work. You can designate service resources as preferred, required, or excluded on specific accounts or work orders. Work orders inherit their associated account's resource preferences.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource preference was last modified.</p>
LastViewedDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource preference was last viewed.</p>
PreferenceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Resource preference type. Values include:</p> <ul style="list-style-type: none"> <li>• Preferred: Indicates that the customer would like their field service work assigned to the resource</li> <li>• Required: Indicates that the resource must be assigned to the customer's field service work</li> <li>• Excluded: Indicates that the customer does not want their field service work assigned to the resource</li> </ul> <p>Resource preferences serve more as a suggestion than a requirement. You can still assign a service appointment to any resource regardless of the related work order's resource preferences.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The work order or account with the resource preference.</p>
ResourcePreferenceNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the resource preference.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The service resource that is preferred, required, or excluded.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ResourcePreferenceFeed

Feed tracking is available for the object.

### ResourcePreferenceHistory

History is available for tracked fields of the object.

## ReturnOrder

---

Represents the return or repair of inventory or products in field service. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service Lightning mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The account associated with the return order.</p>
CaseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The case associated with the return order.</p>
ContactId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The contact associated with the return order.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Notes or context about the return order.</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The location where the items are being returned to. For example, if the return order tracks the return of products from a technician's van to a warehouse, the warehouse is the destination location.</p>
ExpectedArrivalDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the items are expected to arrive at the destination location.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the return order was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the return order was last viewed.</p>

Field Name	Details
OrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The order associated with the return order. When you associated a return order with an order, you can associate the return order's line items with order products.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the return order.</p>
ProductRequestId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The product request associated with the return order. When you associated a return order with a product request, you can associate the return order's line items with the product request's line items.</p> <p>A return order might be related to a product request if the return order tracks the return of unused products or products to be repaired or replaced. For example, a technician creates a product request for three motors to prepare for a field visit. If the technician finds that only two motors are needed, they can create a return order to return the third to the original location, and list the product request in this field.</p>
ReturnOrderNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) Auto-generated number identifying the return order.</p>
ReturnedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> ID of the user returning the items.</p>
ShipFromAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.</p>
ShipFromCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.</p>
ShipFromCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.</p>
ShipFromGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy level of the geocode for the return shipping address. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromLatitude	<p><b>Type</b> double</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Longitude to specify the precise geolocation of the return shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Latitude to specify the precise geolocation of the return shipping address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer’s address.</p>
ShipFromState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer’s address.</p>
ShipFromStreet	<p><b>Type</b> textarea</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street of the return shipping address. This address tracks the location of the items at the start of the return or repair. For example, if a customer is returning an item, the Ship From address is the customer's address.</p>
ShipmentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The type of shipment associated with the return order. Available values are:</p> <ul style="list-style-type: none"> <li>• Standard (default value)</li> <li>• Rush</li> <li>• Overnight</li> <li>• Next Business Day</li> <li>• Pickup</li> </ul>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The items' location at the start of the return or repair. For example, if the return order tracks the return of products from a technician's service vehicle to a warehouse, the service vehicle is the source location.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the return order. Available values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Submitted</li> <li>• Approved</li> <li>• Canceled</li> <li>• Closed</li> </ul>

## Usage

You can use return orders to track customer returns, customer repairs, or the return of inventory from a technician's van stock to a warehouse or supplier. Customers can initiate a return from a community, or agents can create return orders in response to a customer call or technician request.

Return orders are composed of return order line items, which allow you to add details about the items being returned. To represent the returned items, each line item must list one or more of the following: product, product item, asset, product request line item, and order product. Return orders can be associated with a product request, case, account, contact, and order if needed. This versatility lets you use return orders to track a wide range of return scenarios.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ReturnOrderFeed

Feed tracking is available for the object.

### ReturnOrderHistory

History is available for tracked fields of the object.

### ReturnOrderOwnerSharingRule

Sharing rules are available for the object.

### ReturnOrderShare

Sharing is available for the object.

## ReturnOrderLineItem

---

Represents a specific product that is returned or repaired as part of a return order in field service. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service Lightning mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
AssetId	Type reference

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The asset associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Notes or context about the return order line item.</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The location where the items are being returned to. For example, if the return order tracks the return of products from a technician's van to a warehouse, the warehouse is the destination location.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the return order line item was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the return order line item was last viewed.</p>
OrderItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The order product associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId.</p>
ProcessingPlan	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Indicates the preferred fate of the items following their return. Available values are:</p> <ul style="list-style-type: none"> <li>• Repair—Repair the items and return them to the owner</li> <li>• Discard—Discard the items</li> <li>• Salvage—Salvage the items' working parts</li> <li>• Restock—Return the items to your inventory</li> </ul>
Product2Id	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The product associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId.</p>
ProductItemId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The product item representing the location of the product at the start of the return. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId.</p>
ProductRequestLineItemId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The product request line item associated with the return order line item. One or more of the following fields must be filled out: AssetId, OrderItemId, Product2Id, ProductItemId, and ProductRequestLineItemId.</p>
QuantityReturned	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Filter, Sort, Update</p> <p><b>Description</b></p> <p>The quantity of items being returned. If multiple types of products are being returned, track each product in a different return order line item.</p>
QuantityUnitOfMeasure	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Units of the returned items; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
ReasonForReturn	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The reason the items are being returned. Available values are:</p> <ul style="list-style-type: none"> <li>• Damaged</li> <li>• Defective</li> <li>• Duplicate Order</li> <li>• Wrong Item</li> <li>• Wrong Quantity</li> <li>• Not Satisfied</li> <li>• Outdated</li> <li>• Other</li> </ul>
RepaymentMethod	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The method by which the customer or owner will be reimbursed for the items being returned. Available values are:</p> <ul style="list-style-type: none"> <li>• Replace—The items will be replaced</li> <li>• Refund—The items will be returned and the owner will be refunded</li> <li>• Credit—The items will be returned and the owner will receive credit for them</li> <li>• Return—The items will be returned to the owner (for example, following their repair)</li> </ul>
ReturnOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The return order that the return order line item belongs to.</p>
ReturnOrderLineNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) Auto-generated number that identifies the return order line item.</p>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The items' location at the start of the return or repair. For example, if the return order tracks the return of products from a technician's service vehicle to a warehouse, the service vehicle is the source location.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ReturnOrderLineItemFeed](#)

Feed tracking is available for the object.

### [ReturnOrderLineItemHistory](#)

History is available for tracked fields of the object.

## ReturnOrderOwnerSharingRule

---

Represents the rules for sharing a return order with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 42.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the source group. A return order owned by a User in the source Group triggers the rule to give access.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
ServiceResourceAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the User or Group being granted access.</p>

## RuleTerritory2Association

Represents a record-assignment rule and its association to an object, such as Account. Available only if Enterprise Territory Management has been enabled for your organization.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
<code>IsInherited</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates whether the rule is an <i>inherited</i> rule (<code>true</code>) or a <i>local</i> rule (<code>false</code>). Rule inheritance flows from the parent territory where the rule is created to the rule's descendent territories (if any) in the territory model hierarchy. A local rule is created within a single territory and affects that territory only.</p>
<code>RuleId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the rule.</p>
<code>Territory2Id</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the territory where the rule was created.</p>

## SalesAIScoreCycle

Represents the cycle type and ID used to score records. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see score cycle information, users need a Sales Cloud Einstein license with the View Scoring Model Factors permission enabled. The permission isn't enabled by default. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

## Fields

Field	Details
CycleType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The cycle used to create scores on opportunity records can be one of two types.</p> <ul style="list-style-type: none"> <li>• <code>OpportunityScoreModeling</code>—Provides model factors, which Sales Cloud Einstein uses to build a scoring model.</li> <li>• <code>OpportunityScoreScoring</code>—Provides scores and key factors to individual records, which are based on Sales Cloud Einstein's scoring model.</li> </ul> <p> <b>Note:</b> When the value <code>OpportunityScoreModeling</code> is returned, use the Sales AI Score Model Factor object to get information about the model factors.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The ID of the cycle. Currently, the name is a system-generated unique value.</p>

## SalesAIScoreModelFactor

Represents the factors that Sales Cloud Einstein uses to build a scoring model. Scoring models are used by features, such as Opportunity Scoring, to score individual records. This object is available in API version 47.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

To see model factor information, users need a Sales Cloud Einstein license with the "View Scoring Model Factors" permission enabled. The permission isn't enabled by default. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

## Fields

Field	Details
Factor	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> A factor that contributes to a scoring model. For example, a factor could indicate that an amount increase has a positive effect on an opportunity score (AmountIncreasePositive). Or, it could indicate that a change to the close date has a negative effect on an opportunity score (CloseDateChangeNegative).</p>
FactorSummaryOrgLanguage	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Describes the factor in English. For example, the factor field value AmountChangePositive is summarized as "Amount change has positive effect".</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The ID of the model factor. Currently, the name is a system-generated value.</p>
OperatorType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The operator used to analyze field values. For example, the factor HighSuccessLeadSource uses the Lead Source field as the primary source field. When building the scoring model, Einstein uses the Equals operator to determine <code>PrimarySourceFieldValue = Internet</code>. The other supported operator is <code>IsNull</code>.</p>
PrimarySourceFieldName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The name of the primary field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field.</p>
PrimarySourceFieldValue	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Information used to retrieve the PrimarySourceFieldValueText, such as a record ID or value.</p>
PrimarySourceFieldValueText	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The value of the primary source field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field, and the value of the Industry field is manufacturing.</p> <p> <b>Note:</b> This field's value is retrieved from the PrimarySourceFieldValue field. If the PrimarySourceFieldValue field is a record ID, then PrimarySourceFieldValueText returns the name of the record. If OperatorType returns isNull, then PrimarySourceFieldValue returns true and PrimarySourceFieldValueText returns null.</p>
SalesAiScoreCycleId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the score cycle used to generate model factors. Each score cycle can have multiple model factors associated to it.</p>
ScoreCorrelation	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The strength between a model factor and a score. If score correlation value is closer to +1, it's more likely that the model factor contributing toward a high score. If score correlation value is closer to -1, it's more likely that the model factor is contributing toward a low score.</p>

Field	Details
SecondarySourceFieldName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The name of the secondary field used in the model factor. For example, the factor HighAmountActivity uses Task as the primary field and Event as the secondary field. Not all model factors use a secondary source field.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Determines whether the model factor is active or inactive.</p>

## Usage

Use the SalesAIScoreModelFactor object to run a query that retrieves the latest highest influencing model factors.

```
SELECT Id, Factor, ScoreCorrelation, FactorSummaryOrgLanguage
FROM SalesAIScoreModelFactor
WHERE Status='Active' and SalesAIScoreCycle.CycleType='OpportunityScoreModeling'
ORDER BY ScoreCorrelation desc
```

## SalesChannel

Represents the origin of an order. For example, a web storefront, physical store, marketplace, or mobile app. Usually you will set up a SalesChannel for each Site in your B2C Commerce implementation. This object is available in API version 48.0 and later.

## Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

## Special Access Rules

This object is only available in Salesforce Order Management orgs.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Description of the SalesChannel.</p>
ExternalChannelNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> External system identifier for the SalesChannel.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who currently owns this SalesChannel. Default value is the user logged in to the API to perform the create.</p>
SalesChannelName	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the SalesChannel.</p>

## SalesWorkQueueSettings

Represents settings used to customize work queue options for third-party scoring. Third-party scoring enables custom number fields on person accounts, contacts, and leads. You must be a High Velocity Sales customer to update this object. Previously, you could only use the Einstein Intelligence Score for third-party scoring. Available starting in Version 47.0.

 **Note:** This object can't be packaged.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
FeatureName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> A value that represents the name of the work queue settings.  To use custom number fields in the work queue, the value must be entered as <code>ThirdPartyScore</code>.</p>
TargetEntity	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The related record object of the custom number field. Acceptable SObjects include PersonAccount, Contact, and Lead.</p>

Field	Details
TargetField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> A value that represents the DeveloperName of the custom number field related to the TargetEntity. Custom fields must have a custom number data type.</p> <ul style="list-style-type: none"> <li>To use Einstein Intelligence Score for lead scoring, enter <code>ScoreIntelligence.Score</code> for the DeveloperName.</li> <li>To remove custom number fields from the work queue, enter <code>None</code>.</li> </ul>

## SamlSsoConfig

Represents a SAML Single Sign-On configuration. This object is available in API version 32.0 and later.

Single sign-on is a process that allows network users to access all authorized network resources without having to log in separately to each resource. Single sign-on allows you to validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
AttributeFormat	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> For SAML 2.0 only and when <code>identityLocation</code> is set to <code>Attribute</code>. Possible values include <code>unspecified</code>, <code>emailAddress</code> or <code>persistent</code>. All legal values can be found in the “Name Identifier Format Identifiers” section of the <a href="#">Assertions and Protocols SAML 2.0 specification</a>.</p>
AttributeName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The name of the identity provider’s application. Get this name value from your identity provider.</p>
Audience	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The Issuer, also called the “Entity ID.” The value is a URL that uniquely identifies the SAML identity provider.</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package, and the changes are reflected in a subscriber’s organization.</p>
ErrorUrl	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The URL of the page to direct users if there’s an error during SAML login. It must be a publicly accessible page, such as a public site Visualforce page. The URL can be absolute or relative.</p>
ExecutionUserID	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The user that runs the Apex handler class. The user must have the “Manage Users” permission. A user is required if you specify a SAML JIT handler class.</p>

Field Name	Details
IdentityLocation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The location in the assertion where a user is identified. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>SubjectNameId</code>—The identity is in the &lt;Subject&gt; statement of the assertion.</li> <li>• <code>Attribute</code>—The identity is specified in an &lt;AttributeValue&gt;, located in the &lt;Attribute&gt; of the assertion.</li> </ul>
IdentityMapping	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The identifier that the service provider uses for the user during Just-in-Time user provisioning. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>Username</code>—The user’s Salesforce username.</li> <li>• <code>FederationId</code>—The federation ID from the user object; the identifier that’s used by the service provider for the user.</li> <li>• <code>UserId</code>—The user ID from the user’s Salesforce organization.</li> </ul>
Issuer	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup, Group, Sort</p> <p><b>Description</b> Also called the “Entity ID.” The value is a URL that uniquely identifies the SAML identity provider.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language for the organization.</p>
LoginUrl	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> For SAML 2.0 only: The URL where Salesforce sends a SAML request to start the login sequence.</p>
LogoutUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> For SAML 2.0 only: The URL to direct users to where they click the Logout link. The default is <code>http://www.salesforce.com</code>.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The text that's used to identify the Visualforce page in the Setup area of Salesforce.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
OptionsSpInitBinding	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Filter</p> <p><b>Description</b> The service provider initiated request binding, either HTTP Redirect (<code>true</code>) or HTTP POST (<code>false</code>).</p>
OptionsUseConfigRequestMethod	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> If <code>true</code>, applies the selected Request Signature Method (RSM) during single logout. If <code>false</code>, the default RSM (RSA-SHA1) is applied.</p>
OptionsUserProvisioning	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> If <code>true</code>, Just-in-Time user provisioning is enabled, which creates users on the fly the first time that they try to log in. Specify <code>Federation ID</code> for the <code>identityMapping</code> value to use this feature.</p>
RequestSignatureMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The method that's used to sign the SAML request. Valid values are:</p> <ul style="list-style-type: none"> <li>• RSA-SHA1</li> <li>• RSA-SHA256</li> </ul>
SamlJitHandlerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of an existing Apex class that implements the <code>Auth.SamlJitHandler</code> interface.</p>

Field Name	Details
SingleLogoutBinding	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Determines where to put the LogoutRequest or LogoutResponse in the SAML request during single logout (SLO). The value is base64 encoded. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>RedirectBinding</code> — Sent in the query string, deflated.</li> <li>• <code>PostBinding</code> — Sent in the POST body, not deflated.</li> </ul>
SingleLogoutUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The SAML single logout endpoint. This URL is the endpoint where Salesforce sends LogoutRequests (when Salesforce initiates a logout), or LogoutResponses (when the identity provider initiates a logout).</p>
ValidationCert	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The certificate that's used to validate the request. Get this certificate value from your identity provider.</p>
Version	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The SAML version. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>SAML1_1</code></li> <li>• <code>SAML2_2</code></li> </ul>

## Scontrol

---

A custom s-control, which is custom content that is hosted by the system but executed by the client application.

**!** **Important:** Visualforce pages supersede s-controls. Organizations that haven't previously used s-controls can't create them. Existing s-controls are unaffected, and can still be edited. We recommend that you move your s-controls to Visualforce. We continue to support the Scontrol object.

Represents a custom s-control, which is custom content that the system hosts, but client applications execute. An s-control can contain any type of content that you can display or run in a Web browser.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Enterprise, Developer, or Unlimited Edition and be enabled for custom s-controls.
- Customer Portal users can't access this object.

## Fields

Field	Details
Binary	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Binary content of this custom s-control, such as an ActiveX control or a Java archive. Can be specified when created, but not when updated. Limit: 5 MB.</p>
BodyLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The length of the custom s-control. Label is <b>Binary Length</b>.</p>
ContentSource	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Specifies the source of the s-control content, either custom HTML, a snippet (s-controls that are included in other s-controls), or a URL.</p>

Field	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the custom s-control.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is <b>S-Control Name</b>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
EncodingKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Picklist of character set encodings, including ISO-08859-1, UTF-8, EUC, JIS, Shift-JIS, Korean (ks_c_5601-1987), Simplified Chinese (GB2312), and Traditional Chinese (Big5).</p>
Filename	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> An uploaded object to display when the custom s-control is added to a custom link. Can be a Java applet, an ActiveX control, or any other type of desired content.</p>
HtmlWrapper	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p>

Field	Details
	<p><b>Description</b> Required. HTML page that will be delivered when the user views this custom s-control. This HTML page can be the entire content of the custom s-control, or it can reference the binary. Limit: 1,048,576 characters. Label is <b>HTML Body</b>.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. Name of this custom s-control. Label is <b>Label</b>.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
SupportsCaching	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the s-control supports caching (<code>true</code>) or not (<code>false</code>).</p>

## Usage

Use custom s-controls to manage custom content that extends application functionality. All users can view custom s-controls, but the “Customize Application” permission is required to create or update custom s-controls.

[Object Basics](#)

## ScontrolLocalization

---

The translated value of the field label for an s-control.

 **Important:** Visualforce pages supersede s-controls. Organizations that haven’t previously used s-controls can’t create them. Existing s-controls are unaffected, and can still be edited.

When the Translation Workbench is enabled for your organization, provides the translation of the field label of an s-control.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, or Unlimited Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

## Fields

Field	Details
LanguageLocaleKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Restricted picklist</p> <p><b>Description</b> This field is available in API version 16.0 and earlier. It is the same as the <code>Language</code> field.</p>
Language	<p><b>Type</b> picklist</p>

**Field****Details****Properties**

Create, Filter, Nillable, Restricted picklist

**Description**

This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application.

This picklist contains the following fully-supported languages:

- Chinese (Simplified): zh\_CN
- Chinese (Traditional): zh\_TW
- Danish: da
- Dutch: nl\_NL
- English: en\_US
- Finnish: fi
- French: fr
- German: de
- Italian: it
- Japanese: ja
- Korean: ko
- Norwegian: no
- Portuguese (Brazil): pt\_BR
- Russian: ru
- Spanish: es
- Spanish (Mexico): es\_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: sv
- Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.

The following end-user only languages are available.

- Arabic: ar
- Bulgarian: bg
- Croatian: hr
- Czech: cs
- English (UK): en\_GB
- Greek: el
- Hebrew: iw
- Hungarian: hu
- Indonesian: in
- Polish: pl
- Portuguese (European): pt\_PT

**Field****Details**

- Romanian: `ro`
- Slovak: `sk`
- Slovenian: `sl`
- Turkish: `tr`
- Ukrainian: `uk`
- Vietnamese: `vi`

The following platform languages are available for organizations that use Salesforce exclusively as a platform.

- Albanian: `sq`
- Afrikaans: `af`
- Arabic (Algeria): `ar_DZ`
- Arabic (Bahrain): `ar_BH`
- Arabic (Egypt): `ar_EG`
- Arabic (Iraq): `ar_IQ`
- Arabic (Jordan): `ar_JO`
- Arabic (Kuwait): `ar_KW`
- Arabic (Lebanon): `ar_LB`
- Arabic (Libya): `ar_LY`
- Arabic (Morocco): `ar_MA`
- Arabic (Oman): `ar_OM`
- Arabic (Qatar): `ar_QA`
- Arabic (Saudi Arabia): `ar_SA`
- Arabic (Sudan): `ar_SD`
- Arabic (Syria): `ar_SY`
- Arabic (Tunisia): `ar_TN`
- Arabic (United Arab Emirates): `ar_AE`
- Arabic (Yemen): `ar_YE`
- Armenian: `hy`
- Basque: `eu`
- Bosnian: `bs`
- Bengali: `bn`
- Burmese: `my`
- Catalan: `ca`
- Chinese (Hong Kong): `zh_HK`
- Chinese (Singapore): `zh_SG`
- Dutch (Belgium): `nl_BE`
- English (Australia): `en_AU`
- English (Canada): `en_CA`

**Field****Details**

- Te reo: `mi`
- Telugu: `te`
- Urdu: `ur`
- Welsh: `cy`
- Xhosa: `xh`
- Zulu: `zu`

The values in this field are not related to the default locale selection.

**NamespacePrefix****Type**

string

**Properties**

Filter, Nillable

**Description**

The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix\_\_componentName*** notation.

The namespace prefix can have one of the following values.

Field	Details
	<ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
<code>ScontrolId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable</p> <p><b>Description</b> The ID of the Scontrol that is being translated.</p>
<code>Value</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The actual translated field label of the s-control. Label is <b>Translation</b>.</p>

## Usage

Use this object to translate your s-controls into a supported language. Users with the Translation Workbench enabled can view s-control translations, but either the "Customize Application" or "Manage Translation" permission is required to create or update s-control translations.

## ScratchOrgInfo

Represents a scratch org and its audit log. Use this object to create a scratch org and keep a log of its creation and deletion. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
AdminEmail	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The email address of the scratch org's Administration user. The read-only <code>SignupEmail</code> field is populated with this value. If you don't provide a value for <code>AdminEmail</code>, the field is left blank and the <code>SignupEmail</code> is populated with the email address of the org user who is creating this object.</p>
AuthCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with <code>ConnectedAppCallbackUrl</code> and <code>ConnectedAppConsumerKey</code>, when the specified connected app hasn't been configured with an X.509 certificate. This field is read-only.</p>
ConnectedAppCallbackUrl	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create</p> <p><b>Description</b> When used with <code>ConnectedAppConsumerKey</code>, specifies a connected app that is approved automatically during the scratch org creation.</p>
ConnectedAppConsumerKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> When used with <code>ConnectedAppCallbackUrl</code>, specifies a connected app that is approved automatically during the scratch org creation.</p>
Country	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The two-character, upper-case ISO-3166 country code. You can find a full list of these codes at several sites, such as: <a href="http://www.iso.ch/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html">www.iso.ch/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html</a>. The language of the scratch org is auto-determined based on the value of this field. If you do not specify a value, this field defaults to the Dev Hub's country code.</p>
DeletedBy	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user who requested that the scratch org be deleted. This field is read-only.</p>
DeletedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date when the DeletedBy user requested that the scratch org be deleted. This field is read-only.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A free-form text field for you to enter a description of this scratch org.</p>
DurationDays	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Sort</p> <p><b>Description</b> Number of days after which the scratch org expires. Valid values are 1–30. The default is 7.</p>
Edition	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The org edition of this scratch org. Valid values are <code>Group</code>, <code>Developer</code>, <code>Enterprise</code>, and <code>Professional</code>.</p>
ErrorCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The error code if the scratch org creation isn't successful. This field is read-only.</p>
ExpirationDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Date when the scratch org expires. This field is read-only.</p>
Features	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable</p> <p><b>Description</b> A semi-colon delimited list of the features enabled in this scratch org, such as <code>MultiCurrency</code>. See the <i>Salesforce DX Developer Guide</i> for the full list of valid features.</p>
HasSampleData	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether the scratch org contains sample data. If set to <code>true</code>, the sample data is similar to the data in a Salesforce free trial org.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The language of the scratch org being created. Specify the language using a language code listed under "Supported Languages" in Salesforce Help. For example, use <code>zh_CN</code> for simplified Chinese. The value you select overrides the language set by locale.</p> <p>If you don't specify a value, the language is based on the <code>COUNTRY</code> used during scratch org creation. If you don't specify a value for <code>COUNTRY</code>, the value defaults to the Dev Hub's country.</p>
LastLoginDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date of the last user login to the scratch org. This field is read-only.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date this scratch org was last referenced. This field is read-only.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date this scratch org was last viewed. This field is read-only.</p>
LoginUrl	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> A URL that logs you in to the scratch org. This field is read-only.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p>

Field Name	Details
	<p><b>Description</b> The auto-generated ID of this scratch org. This field is read-only.</p>
Namespace	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace you want to associate with this scratch org. The value of this field corresponds to the <code>NamespacePrefix</code> field of the <code>NamespaceRegistry</code> object that describes your namespace.</p>
OrgName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The name of the scratch org.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who created this scratch org.</p>
ScratchOrg	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The org ID of the scratch org. This field is read-only.</p>
Release	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The release of the scratch org. During Salesforce's major release transitions, this field allows you to select the Salesforce release version, based on the version of your Dev Hub. This field is available in API version 46.0 and later. Valid values are:</p> <ul style="list-style-type: none"> <li>• Current</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <a href="#">Preview</a></li> <li>• <a href="#">Previous</a></li> </ul> <p>See <a href="#">Select the Salesforce Release for a Scratch Org</a> for more information.</p>
SignupCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The country code of the scratch org. This field is populated with the value of the <code>COUNTRY</code> field. If you didn't provide a value for <code>COUNTRY</code>, it's the country code of the Dev Hub. This field is read-only.</p>
SignupEmail	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The email address of the scratch org's Administration user. This field is populated with the value of the <code>AdminEmail</code> field. If you didn't provide a value for <code>AdminEmail</code>, it's the email address of your user in the Dev Hub. This field is read-only.</p>
SignupInstance	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The Salesforce instance on which this scratch org resides. This field is read-only.</p>
SignupLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language of the scratch org. This field is populated with the value of the <code>Language</code> field. If you didn't provide a value for <code>Language</code>, it's the language of the Dev Hub. This field is read-only.</p>
SignupTrialDays	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of days between the scratch org's creation and expiration. This field is read-only.</p>
SignupUsername	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The username of the Administration user of this scratch org. This field is populated with the value of the <code>Username</code> field. If you didn't provide a value for <code>Username</code>, the value of this field is auto-generated. This field is read-only.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the scratch org, such as active, expired, or deleted. This field is read-only.</p>
Username	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The username of the Administration user of this scratch org.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ScratchOrgInfoFeed](#)

Feed tracking is available for the object.

### [ScratchOrgInfoHistory](#)

History is available for tracked fields of the object.

### [ScratchOrgInfoOwnerSharingRule](#)

Sharing rules are available for the object.

**ScratchOrgInfoShare**

Sharing is available for the object.

## SearchPromotionRule

---

Represents a promoted search term, which is one or more keywords that you associate with a Salesforce Knowledge article. When a user's search query includes these keywords, the associated article is returned first in search results. This object is available in API version 31.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

A user must have the "Manage Promoted Search Terms" permission.

### Fields

Field Name	Details
PromotedEntityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the KnowledgeArticleVersion that the promoted search term is associated with. The article must be in published status.</p>
Query	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The text of the promoted search term. Maximum length: 100 characters.  You can associate the same promoted search term with multiple articles. If the user's search matches the promoted term, all associated articles are promoted</p>

**Field Name****Details**

in search results, ordered by relevancy. For best results, create promoted search terms selectively and limit the number of articles that are promoted per term.

## Usage

Use this object to optimize article search results in Salesforce Knowledge.

## SecureAgent

Represents a Secure Agent that connects Salesforce to on-premises external data sources like SharePoint 2010 and 2013. This object is available in API version 32.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

**Field Name****Details**

DeveloperName

**Type**

string

**Properties**

Filter, Group, Sort

**Description**

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

Language

**Type**

picklist

**Properties**

Filter, Group, Restricted picklist, Sort

Field Name	Details
	<p><b>Description</b></p> <p>The language of agent labels in the user interface.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The user-interface name for the agent.</p>
Priority	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Specifies the order in which this agent is accessed relative to others in a Secure Agent cluster.</p> <p>This field is available in API version 35 and later.</p>
ProxyUserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the user profile specific to the agent.</p>
SecureAgentsClusterId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of a cluster of agents that contains this individual agent. Clusters provide failover protection if an agent on a particular server becomes inaccessible. To edit them, use the <a href="#">SecureAgentsCluster</a> object.</p> <p>This field is available in API version 35 and later.</p>

## SecureAgentsCluster

Represents a cluster consisting of several Secure Agents on different servers. Clusters provide failover protection if an agent on a particular server becomes inaccessible. This object is available in API version 35.0 and later.

Secure Agents connect Salesforce to content in on-premises external data sources, such as SharePoint 2010 and 2013. To edit individual agents that are part of a cluster, use the [SecureAgent](#) object.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Describes details about the cluster, providing context to other developers.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language of cluster labels in the user interface.</p>
MasterLabel	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The user-interface name for the cluster.</p>

## SecurityCustomBaseline

Provides the ability to read, create, and delete user-defined custom security baselines, which define an org's security standards. This object is available in API version 39.0 and later.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

You must have the "View Health Check" permission to read a custom baseline, and the "Manage Health Check" permission to create, edit, or delete one.

### Fields

Field Name	Details
Baseline	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The definition of an org's security settings standards.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.</p>

Field Name	Details
	<p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Sets the baseline as the default in Security Health Check.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the presence status.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label for the category node.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix associated with the package.</p>

## SelfServiceUser

Represents a Contact who has been enabled to use your organization's Self-Service portal, where he or she can obtain online support.

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new orgs. Existing orgs continue to have access to the Self-Service portal.

## Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

Field	Details
<code>ContactId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. All Self-Service users must be associated with a Contact. The contact's email should match the Self-Service user email. The contact must have a value in the <code>AccountId</code> field or an error occurs.</p>
<code>Email</code>	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. Make this the same as the email address for the Contact associated with this SelfServiceUser. Password resets and other system communication will be sent to this email address.</p>
<code>FirstName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> First name of the Self-Service user.</p>
<code>IsActive</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the Self-Service user is allowed to log in to the Self-Service portal (<code>true</code>) or not (<code>false</code>). Note that there is no way to delete a Self-Service user. They can only be marked as inactive.</p>
IsDeleted	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter</p> <p><b>Description</b></p> <p>Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
LanguageLocaleKey	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Required. This is a restricted picklist field. It is the primary language for the user. All on-screen text in the Self-Service portal is displayed in this language.</p>
LastLoginDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date and time when the Self-Service user last logged in.</p>
LastName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Last name of the Self-Service user.</p>
LocaleSidKey	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Required. This is a restricted picklist field. The value of this field affects the formatting and parsing of values, especially numeric values, in the Self-Service portal. Values are two-letter</p>

Field	Details
	codes that indicate language and sometimes language and country. The codes are based on ISO standards.
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Concatenation of <code>FirstName</code> and <code>LastName</code>. Limited to 121 characters.</p>
SuperUser	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this Self-Service user is a super user with additional access on his or her company's Self-Service portal (<code>true</code>) or not (<code>false</code>).</p>
TimeZoneSidKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. This is a restricted picklist field. The time zone of a affects the offset used when displaying or entering times in the Self-Service portal.</p>
Username	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. This contains the name that a Self-Service user enters to log into the Self-Service portal. Value must be unique in your organization. If you try to create or update a user with a duplicate value, the operation is rejected and an error is returned.</p>

## Usage

For security reasons, you can't query Self-Service user passwords via the API or the user interface. However, the API allows you to set and reset Self-Service user passwords using the `setPassword()` and `resetPassword()` calls.

SelfServiceUser records created from the API don't cause a notification email to be sent. If you want to notify the user, you must send them an email after creating the user.

## ServiceAppointment

---

Represents an appointment to complete field service work for a customer in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The account associated with the appointment. If the parent record is a work order or work order line item, this field's value is inherited from the parent. Otherwise, it remains blank.</p>
ActualDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The number of minutes that it took the resource to complete the appointment after arriving at the address. When values are first added to the <code>Actual Start</code> and <code>Actual End</code> fields, the <code>Actual Duration</code> is automatically populated to list the difference between the <code>Actual Start</code> and <code>Actual End</code>. If the <code>Actual Start</code> and <code>Actual End</code> fields are subsequently</p>

Field Name	Details
	updated, the <code>Actual Duration</code> field doesn't re-update, but you can manually update it.
<code>ActualEndTime</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The actual date and time the appointment ended.</p>
<code>ActualStartTime</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The actual date and time the appointment started.</p>
<code>Address</code>	<p><b>Type</b> address</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The address where the appointment is taking place. The address is inherited from the parent record if the parent record is a work order or work order line item.</p>
<code>AppointmentNumber</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-assigned number that identifies the appointment.</p>
<code>ArrivalWindowEndTime</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The end of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.</p>

Field Name	Details
ArrivalWindowStartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The beginning of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city where the appointment is completed. Maximum length is 40 characters.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The contact associated with the parent record. If needed, you can manually update the service appointment contact.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country where the work order is completed. Maximum length is 80 characters.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the appointment.</p>
DueDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date by which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.</p>
Duration	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Nillable, Filter, Sort, Update</p> <p><b>Description</b> The estimated length of the appointment. If the parent record is work order or work order line item, the appointment inherits its parent's duration, but it can be manually updated. The duration is in minutes or hours based on the value selected in the <code>Duration Type</code> field.</p>
DurationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The unit of the Duration: Minutes or Hours.</p>
EarliestStartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date after which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> <b>Note:</b> This field is available in the API only.</p>

Field Name	Details
IsAnonymousBooking	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether a service resource was automatically assigned to the appointment. The default value is false.  This field is available in API version 49.0 and later.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service appointment was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service appointment was last viewed.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of the address where the service appointments is completed. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Used with <code>Latitude</code> to specify the precise geolocation of the address where the service appointment is completed. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The owner of the service appointment.</p>
ParentRecordId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The parent record associated with the appointment. The parent record can't be updated after the service appointment is created.</p>
ParentRecordStatusCategory	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Group, Nillable, Sort</p> <p><b>Description</b></p> <p>(Read only) The <code>Status Category</code> of the parent record. If the parent record is a work order or work order line item, this field is populated; otherwise, it remains blank.</p>
ParentRecordType	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Group, Nillable, Sort</p> <p><b>Description</b></p> <p>(Read only) The type of parent record: Account, Asset, Lead, Opportunity, Work Order, or Work Order Line Item.</p>
PostalCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The postal code where the work order is completed. Maximum length is 20 characters.</p>
SchedEndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time at which the appointment is scheduled to end. If you are using the Field Service Lightning managed packages with the scheduling optimizer, this field is populated once the appointment is assigned to a resource. <code>Scheduled End - Scheduled Start = Estimated Duration</code>.</p>
SchedStartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time at which the appointment is scheduled to start. If you are using the Field Service Lightning managed packages with the scheduling optimizer, this field is populated once the appointment is assigned to a resource.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service territory associated with the appointment. If the parent record is a work order or work order line item, the appointment inherits its parent's service territory.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state where the service appointment is completed. Maximum length is 80 characters.</p>
Status	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the appointment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• <code>None</code>—Default value.</li> <li>• <code>Scheduled</code>—Appointment has been assigned to a service resource.</li> <li>• <code>Dispatched</code>—Assigned service resource has been notified about their assignment.</li> <li>• <code>In Progress</code>—Work has begun.</li> <li>• <code>Completed</code>—Work is complete.</li> <li>• <code>Cannot Complete</code>—Work could not be completed.</li> <li>• <code>Canceled</code>—Work is canceled, typically before any work began</li> </ul>
StatusCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The category that each <code>Status</code> value falls into. The <code>Status Category</code> field's values are identical to the default <code>Status</code> values.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <code>Customer Absent</code> value, you may decide that it belongs in the <code>Cannot Complete</code> category. To learn which processes reference <code>StatusCategory</code>, see <a href="#">How are Status Categories Used?</a></p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name where the service appointment is completed.</p>
Subject	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A short phrase describing the appointment.</p>

Field Name	Details
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work type associated with the service appointment. The work type is inherited from the appointment's parent record if the parent is a work order or work order line item.</p> <p> <b>Note:</b> If Lightning Scheduler is also in use, this field is editable. However, users see an error if they update it to list a different work type than the parent record's work type.</p>

## Usage

Service appointments always have a parent record, which can be a work order, work order line item, opportunity, account, or asset. The type of parent record tells you about the nature of the service appointment:

- Service appointments on *work orders* and *work order line items* offer a more detailed view of the work being performed. While work orders and work order line items let you enter general information about a task, service appointments are where you add the details about scheduling and ownership.
- Service appointments on *assets* represent work being performed on the asset.
- Service appointments on *accounts* represent work being performed for the account.
- Service appointments on *opportunities* represent work that is related to the opportunity.
- Service appointments on *leads* represent work that is related to lead—for example, a site visit to pursue a promising lead.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceAppointmentFeed](#)

Feed tracking is available for the object.

### [ServiceAppointmentHistory](#)

History is available for tracked fields of the object.

### [ServiceAppointmentOwnerSharingRule](#)

Sharing rules are available for the object.

### [ServiceAppointmentShare](#)

Sharing is available for the object.

## ServiceAppointmentStatus

Represents a possible status of a service appointment in field service.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The API name of the status value.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates that the status value is the default status on service appointments. Only one status value can be the default.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The label for the picklist value that appears in the UI.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p><b>Type</b> picklist</p>

**Field Name****Details****Properties**

Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

**Description**

The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.

## Usage

The Status field on service appointments comes with the following values:

- None—Default value.
- Scheduled—Appointment has been assigned to a service resource.
- Dispatched—Assigned service resource has been notified about their assignment.
- In Progress—Work has begun.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Canceled—Work is canceled, typically before any work began

The ServiceAppointmentStatus object corresponds to the Status field. Adding a value to the Status field—for example, Waiting—creates a service appointment status record, and vice versa.

 **Note:** Service appointments also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

## ServiceChannel

Represents a channel of work items that are received from your organization—for example, cases, chats, or leads. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
CapacityModel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, RestrictedPicklist, Sort, Update</p> <p><b>Description</b> The method that determines when an agent's capacity for a work item is released. With the Status-Based capacity routing model, work remains assigned and applied to an agent's capacity until the work is completed or reassigned to a different agent. In contrast, the tab-based capacity model releases an agent's capacity when a work tab is closed in the service console. Possible values are StatusBased and TabBased.</p>
CapacityPercentage	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel.</p> <p>For example, you might give phone calls a capacity percentage of 100. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%.</p> <p>This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity percentage of work items on the <a href="#">QueueRoutingConfig</a> object. The CapacityPercentage field was removed in API version 33.0.</p>
CapacityWeight	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The amount of an agent's capacity for work items that's consumed by a work item from this service channel.</p> <p>For example, if an agent has a capacity of 6, and cases are assigned a capacity weight of 2, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items.</p> <p>This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity weight of work items on the <a href="#">QueueRoutingConfig</a> object. The CapacityWeight field was removed in API version 33.0.</p>

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
DoesCheckCapOnOwnerChange	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> In the Status-Based capacity routing model, when work is reassigned to a specific agent, you can choose to override the capacity check and keep the work assigned to the agent. The default value is false.</p>
DoesCheckCapOnStatusChange	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> In the Status-Based capacity routing model, when work is reopened, you can choose to override the capacity check and keep the work assigned to a specific agent. The default value is false.</p>
DoesMinimizeWidgetOnAccept	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Automatically minimizes the Omni-Channel widget when an agent accepts work. The default value is false.</p>
Language	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the service channel.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label of the service channel.</p>
RelatedEntity	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of object that's associated with this service channel. This field is unique within your organization.</p>
SecRoutingPriorityField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The name of the standard field or the id of the custom field that is used for secondary routing priority. This field is unique within your organization.</p>
StatusField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The picklist field that you use to track work status in the Status-Based capacity routing model. Use ServiceChannelStatusField to specify the values that indicate completed and in-progress work-item status.</p>

## ServiceChannelFieldPriority

Represents a secondary routing priority field-value mapping. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
Priority	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The priority number assigned to the mapped field value.</p>
ServiceChannelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the service channel.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The value of the SecRoutingPriorityField field defined in parent ServiceChannel.</p>

## ServiceChannelStatus

Represents the status that's associated with a specific service channel. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
<code>ServiceChannelId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the service channel.</p>
<code>ServicePresenceStatusId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the presence status that's associated with the service channel that's specified by the <code>ServicePresenceChannelId</code>.</p>

## ServiceChannelStatusField

Represents the values that you use to indicate completed and in-progress work item status for the status field in the Status-Based Capacity routing model. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

To access this object, [Omni-Channel](#) and Status-Based Capacity Model must be enabled.

## Fields

Field	Details
<code>ServiceChannelId</code>	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the service channel.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> For the field that you use to track work status, specifies whether the values are for completed or in-progress work.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Specifies the values that you use to indicate completed and in-progress work status.</p>

## ServiceContract

Represents a customer support contract (business agreement). This object is available in API version 18.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the account associated with the service contract.</p>

Field	Details
ActivationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The initial day the service contract went into effect (whereas <code>StartDate</code> may include a renewal date).</p>
ApprovalStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Approval status of the service contract.</p>
BillingAddress (beta)	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the billing address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
BillingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address. Maximum size is 40 characters.</p>
BillingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address. Maximum size is 40 characters.</p>
BillingCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> The ISO country code for the service contract's billing address.</p>
BillingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
BillingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details for the billing address. Maximum size is 20 characters.</p>
BillingState	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Sort, Filter, Nillable</p> <p><b>Description</b> Details for the billing address. Maximum size is 20 characters.</p>
BillingStateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ISO state code for the service contract's billing address.</p>

Field	Details
BillingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Street address for the billing address.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required. ID of the Contact associated with the service contract. Must be a valid ID.</p>
ContractNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Unique number automatically assigned to the service contract.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Description of the service contract.</p>
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The last day the service contract is in effect. Weighted average of all contract line item discounts on the service contract.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b> The last day the service contract is in effect.</p>
GrandTotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Total price of the service contract plus shipping and taxes.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LineItemCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable, Group, Sort</p> <p><b>Description</b> Number of ContractLineItem records associated with the service contract.</p>
Name	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Name of the service contract.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who currently owns the service contract.</p>
ParentServiceContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service contract's parent service contract, if it has one.</p>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Pricebook2 associated with the service contract. Must be a valid ID.</p>
RootServiceContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The top-level service contract in a service contract hierarchy. Depending on where a service contract lies in the hierarchy, its root could be the same as its parent.</p>
ShippingAddress (beta)	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the shipping address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>

Field	Details
ShippingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details of the shipping address. Maximum size is 40 characters.</p>
ShippingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Details of the shipping address. Country maximum size is 40 characters.</p>
ShippingCountryCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ISO country code for the service contract's shipping address.</p>
ShippingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
ShippingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
ShippingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p>

Field	Details
	<p><b>Description</b> Details of the shipping address. Postal code maximum size is 20 characters.</p>
ShippingState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Details of the shipping address. State maximum size is 20 characters.</p>
ShippingStateCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ISO state code for the service contract's shipping address.</p>
ShippingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The street address of the shipping address. Maximum of 255 characters.</p>
SpecialTerms	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Any terms specifically agreed to and tracked in the service contract.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The first day the service contract is in effect.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Nillable</p>

Field	Details
	<p><b>Description</b> The status of the service contract, such as Inactive.</p>
Subtotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Total of the service contract line items (products) before discounts, taxes, and shipping are applied.</p>
Tax	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Total taxes for the service contract.</p>
Term	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Number of months that the service contract is valid.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> Total of the contract line items (products) after discounts and before taxes and shipping.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceContractFeed \(API version 23.0\)](#)

Feed tracking is available for the object.

### [ServiceContractHistory](#)

History is available for tracked fields of the object.

### [ServiceContractOwnerSharingRule](#)

Sharing rules are available for the object.

**ServiceContractShare**

Sharing is available for the object.

SEE ALSO:

[ServiceContractOwnerSharingRule](#)

## ServiceContractOwnerSharingRule

---

Represents the rules for sharing a ServiceContract (customer service agreement) with users other than the owner. This object is available in API version 18.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> A value that represents the type of sharing allowed. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort,</p> <p><b>Description</b> The ID representing the source group. Service contracts owned by users in the source group trigger the rule to give access.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> in the user interface.</p>
UserorGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> The ID representing the target user or group. Target users or groups are given access.</p>

## Usage

Use this object to manage the sharing rules for a service contract. General sharing and territory management-related sharing use this object.

SEE ALSO:

[ServiceContract](#)

[Metadata API Developer Guide: SharingRules](#)

## ServiceCrew

---

Represents a group of service resources who can be assigned to service appointments as a unit.

A service crew is a group of service resources whose combined skills and experience make them a good fit to work together on appointments. For example, a wellhead repair crew might include a hydrologist, a mechanical engineer, and an electrician.

Service appointments can only be assigned to service resources. To assign a service crew to service appointments, you must create a service resource with a resource type of Crew that represents the crew, then use the resource for assignment purposes.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
CrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The number of members on the crew. This field is manual, so it doesn't auto-update when you add or remove members.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The date when the service crew was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date when the service crew was last viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The name of the service crew. For example, Repair Crew.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The crew owner. By default, the owner is the person who created the service crew.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceCrewFeed](#)

Feed tracking is available for the object.

### [ServiceCrewHistory](#)

History is available for tracked fields of the object.

### [ServiceCrewOwnerSharingRule](#)

Sharing rules are available for the object.

### [ServiceCrewShare](#)

Sharing is available for the object.

## ServiceCrewMember

Represents a technician service resource that belongs to a service crew.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
EndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The last day that the service resource belongs to the crew. You can use this field to track employment dates for contractors.</p>
IsLeader	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates that the member is the crew leader.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service crew member was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service crew member was last viewed.</p>

Field Name	Details
ServiceCrewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The crew that the service resource belongs to.</p>
ServiceCrewMemberNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the service crew member.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The service resource that belongs to the crew. Only service resources whose resource type is Technician can be added to service crews.</p>
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Required. The day the service resource joins the crew. Service resources can belong to multiple crews as long as their start and end dates don't overlap.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceCrewMemberFeed](#)

Feed tracking is available for the object.

### [ServiceCrewMemberHistory](#)

History is available for tracked fields of the object.

## ServiceCrewOwnerSharingRule

Represents the rules for sharing a service crew with user records other than the owner or anyone above the owner in the role hierarchy.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The ID representing the source group. A service crew owned by a User in the source Group triggers the rule to give access.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
ServiceResourceAccessLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID representing the User or Group being granted access.</p>

## ServicePresenceStatus

---

Represents a presence status that can be assigned to a service channel. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

### Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the presence status.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The label of the presence status.</p>

## ServiceReport

Represents a report that summarizes a work order, work order line item, or service appointment.

The fields that appear on a service report are determined by its service report template. Service reports can be signed by the customer and shared as a PDF.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
ContentVersionDocumentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the service report version, used for storage.</p>
DocumentBody	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Nillable</p> <p><b>Description</b> The report output.</p>
DocumentContentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of data used for the report output: application/pdf.</p>
DocumentLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The length of the report output.</p>
DocumentName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the report output, always set to Service Report.</p>

Field Name	Details
IsSigned	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the service report contains one or more signatures.</p> <p> <b>Tip:</b> Add this field to the Service Reports related list on work orders, work order line items, and service appointments.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the service appointment, work order, or work order line item that the service report summarizes. For example, if you click <b>Create Service Report</b> on a service appointment, this field lists the service appointment's record ID.</p>
ServiceReportLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Restricted picklist</p> <p><b>Description</b> The language used for the service report. The language is selected in the <code>ServiceReportLanguage</code> field on the associated work order. If the work order doesn't specify a service report language, the report is translated in the default language in Salesforce of the person generating the report.</p>
ServiceReportNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the service report.</p>
Template	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The service report template used to generate the service report.</p>

**Field Name****Details**

**Note:** If the person creating the service report doesn't have access to certain objects or fields that are included in the service report template, those fields aren't visible in the report they create.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceReportHistory](#)

History is available for tracked fields of the object.

## ServiceReportLayout

Represents a service report template in field service.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

**Field Name****Details**

DeveloperName

**Type**

string

**Properties**

Filter, Group, Sort

**Description**

The developer name of the service report template.

Language

**Type**

picklist

**Properties**

Filter, Group, Restricted picklist, Sort

**Description**

The language that the service report template uses.

Field Name	Details
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date the service report template was last viewed.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the service report template. For example, Maintenance Report Template.</p>

## ServiceResource

Represents a service technician or service crew in field service in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the resource.</p>

Field Name	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> When selected, this option means that the resource can be assigned to work orders. For service tracking purposes, resources can't be deleted, so deactivating a resource is the best way to send them into retirement.</p> <p>Deactivating a user deactivates the related service resource. You can't create a service resource that is linked to an inactive user.</p>
IsCapacityBased	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Capacity-based resources are limited to a certain number of hours or appointments in a specified time period.</p> <p> <b>Tip:</b> The Capacities related list shows a resource's capacity.</p>
IsOptimizationCapable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> This field is reserved for Field Service Lightning and the managed package. Create a custom field instead of using this field to indicate whether optimization should use a service resource.</p>
LastKnownLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The latitude of the last known location.</p>
LastKnownLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The longitude of the last known location.</p>
LastKnownLocation	<p><b>Type</b> location</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The service resource's last known location. You can configure this field to display data collected from a custom mobile app. This field is not visible in the user interface, but you can expose it on service resource page layouts or set up field tracking to be able to view a resource's location history.</p>
LastKnownLocationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time of the last known location.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service resource was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the service resource was last viewed.</p>
LocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Nillable, Update</p> <p><b>Description</b> The location associated with the service resource. For example, a service vehicle driven by the service resource.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The resource's name. You'll likely want this to be the name or title of the associated user or service crew.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the service resource.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Nillable</p> <p><b>Description</b> The associated user. Its label in the UI is <code>User</code>. If the service resource represents a service crew rather than a user, leave the <code>User</code> field blank and select the related crew in the <code>ServiceCrewId</code> field.</p>
ResourceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates whether the resource is a Technician (T), Dispatcher (D), Crew (C), Asset (S), Agent (A), or Planner (P). The default value is Technician (T). Resources who are dispatchers can't be capacity-based or included in scheduling optimization. Only users with the Field Service Dispatcher permission set license can be dispatchers. You can't add additional resource types.</p>
ServiceCrewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Nillable, Update</p> <p><b>Description</b> The associated service crew. If the service resource represents a crew, select the crew.</p>

**Field Name****Details**

**Note:** This field is hidden for all users by default. To use it, update its field-level security settings in Setup and add it to your service resource page layouts.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ServiceResourceFeed

Feed tracking is available for the object.

### ServiceResourceHistory

History is available for tracked fields of the object.

### ServiceResourceOwnerSharingRule

Sharing rules are available for the object.

### ServiceResourceShare

Sharing is available for the object.

## ServiceResourceCapacity

Represents the maximum number of scheduled hours or number of service appointments that a capacity-based service resource can complete within a specific time period. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

**Field Name****Details**

CapacityInHours

**Type**

double

**Properties**

Create, Filter, Nillable, Sort, Update

**Description**

The number of hours that the resource can work per time period. You must fill out this field, the `CapacityInWorkItems` field, or both.

Field Name	Details
CapacityInWorkItems	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The total number of service appointments that the resource can complete per time period. You must fill out this field, the <code>CapacityInHours</code> field, or both.</p>
CapacityNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> (Read only) An auto-generated number identifying the capacity record.</p>
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date the capacity ends; for example, the end date of a contract.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
ServiceResourceId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The associated service resource. You can set multiple capacities for a resource as long as their start and end dates do not overlap.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The date the capacity goes into effect.</p>
TimePeriod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Days, Hours, or Months. For example, if a resource can work 80 hours per month, the capacity's <code>Time Period</code> would be <code>Month</code> and <code>Hours per Time Period</code> would be <code>80</code>.</p>

## Usage

Service resources who are capacity-based can only work a certain number of hours or complete a certain number of service appointments within a specified time period. Contractors tend to be capacity-based. To indicate that a service resource is capacity-based, select **Capacity-Based** on the service resource record, then create a capacity record for the service resource.

You must fill out at least one of these fields: `CapacityInWorkItems` and `CapacityInHours`. If you're using the Field Service Lightning managed package and would like to measure capacity both in hours and in number of work items, enter a value for both. The resource is considered to reach their capacity based on whichever term is met first—hours or number of work items.

 **Important:** If you aren't using the Field Service Lightning managed package, capacity serves more as a suggestion than a rule. Resources can still be as scheduled beyond their capacity, and you aren't notified when a resource exceeds their capacity.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceResourceCapacityFeed](#)

Feed tracking is available for the object.

### [ServiceResourceCapacityHistory](#)

History is available for tracked fields of the object.

## ServiceResourceCapacityHistory

---

Represents the history of changes made to tracked fields on a service resource capacity record. This object is available in API version 38.0 and later.

### Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

Field Service Lightning must be enabled in your organization, and field tracking for service resource capacity fields must be configured.

### Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The value of the field before it was changed.</p>
ServiceResourceCapacityId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the service resource capacity being tracked. The history is displayed on the detail page for this record.</p>

## ServiceResourceOwnerSharingRule

Represents the rules for sharing a service resource with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 38.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID representing the source group. A service resource owned by a User in the source Group triggers the rule to give access.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
ServiceResourceAccessLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The ID representing the User or Group being granted access.</p>

## ServiceResourceSkill

Represents a skill that a service resource possesses in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
<code>EffectiveEndDate</code>	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The date when the skill expires. For example, if a service resource needs to be re-certified after six months, the end date would be the date their certification expires.</p>
<code>EffectiveStartDate</code>	<p><b>Type</b></p> <p>date</p> <p><b>Properties</b></p> <p>Create, Filter, Sort, Update</p> <p><b>Description</b></p> <p>The date when the service resource gains the skill. For example, if the skill represents a certification, the start date would be the date of certification.</p>
<code>LastReferencedDate</code>	<p><b>Type</b></p> <p>dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource skill was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the resource skill was last viewed.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The service resource who possesses the skill.</p>
SkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The skill the service resource possesses.</p>
SkillLevel	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The service resource's skill level. Skill level can range from zero to 99.99.</p>
SkillNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the resource skill assignment.</p>

## Usage

You can assign skills to all service resources in your org to indicate their certifications and areas of expertise, and specify each resource's skill level from 0 to 99.99. For example, you can assign Maria the "Welding" skill, level 50.

If you intend to use the skills feature, determine which skills you want to track and how skill level should be determined. For example, you may want the skill level to reflect years of experience, certification levels, or license classes.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ServiceResourceSkillFeed

Feed tracking is available for the object.

### ServiceResourceSkillHistory

History is available for tracked fields of the object.

## ServiceTerritory

---

Represents a geographic or functional region in which field service work can be performed in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> An address to associate with the territory. You may want to list the address of the territory's headquarters.</p>
City	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the associated address. Maximum length is 40 characters.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country to associate with the territory. Maximum length is 80 characters.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the territory.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> <b>Note:</b> This field is available in the API only.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the service territory is meant to be used. If a territory is inactive, you can't add members to it or link it to work orders, work order line items, or service appointments.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory was last viewed.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the territory.</p>

Field Name	Details
OperatingHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The territory's operating hours, which indicate when service appointments within the territory can occur. Service resources who are members of a territory automatically inherit the territory's operating hours unless different hours are specified on the resource record.</p>
ParentTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The territory's parent service territory, if it has one. For example, a <i>Northern California</i> territory can have a <i>State of California</i> territory as its parent. A service territory hierarchy can contain up to 10,000 territories.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the address associated with the territory. Maximum length is 20 characters.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the address associated with the territory. Maximum length is 80 characters.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name of the address associated with the territory.</p>

Field Name	Details
TopLevelTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The top-level territory in a hierarchy of service territories. Depending on where a territory lies in the hierarchy, its top-level territory might be the same as its parent.</p>
TypicalInTerritoryTravelTime	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Estimated number of minutes needed to travel from one location to another within the service territory. You can use this field in Apex customization.</p>

## Usage

If you want to use service territories, determine which territories you need to create. Depending on how your business works, you may decide to create territories based on cities or counties, or on functional categories such as sales versus service. If you plan to build out a hierarchy of service territories, create the highest-level territories first.

For example, you can create a hierarchy of territories to represent the areas where your team works in California. Include a top-level territory named *California*, three child territories named *Northern California*, *Central California*, and *Southern California*, and a series of third-level territories corresponding to California counties. Assign service resources to each county territory to indicate who is available to work in that county.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceTerritoryFeed](#)

Feed tracking is available for the object.

### [ServiceTerritoryHistory](#)

History is available for tracked fields of the object.

### [ServiceTerritoryOwnerSharingRule](#)

Sharing rules are available for the object.

### [ServiceTerritoryShare](#)

Sharing is available for the object.

## ServiceTerritoryLocation

---

Represents a location associated with a particular service territory in field service.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
LocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The location that is associated with the service territory.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The associated service territory.</p>
ServiceTerritoryLocationNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) Auto-generated number identifying the service territory location.</p>

### Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

#### [ServiceTerritoryLocationFeed](#)

Feed tracking is available for the object.

**ServiceTerritoryLocationHistory**

History is available for tracked fields of the object.

## ServiceTerritoryMember

---

Represents a service resource who can be assigned to service appointments in a service territory in Field Service Lightning and Lightning Scheduler. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Special Access Rules

Field Service Lightning must be enabled.

### Fields

Field Name	Details
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The member's address. You may want to list the related service resource's address in this field.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the member's address. Maximum length is 40 characters.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the member's address. Maximum length is 80 characters.</p>

Field Name	Details
EffectiveEndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the service resource is no longer a member of the territory. If the resource will be working in the territory for the foreseeable future, leave this field blank. This field is mainly useful for indicating when a temporary relocation ends.</p>
EffectiveStartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date when the service resource becomes a member of the service territory.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> <b>Note:</b> This field is available in the API only.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory member was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory member was last viewed.</p>

Field Name	Details
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of the member's address. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of the member's address. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
MemberNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read only) An auto-generated number identifying the service territory member.</p>
OperatingHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Nillable, Update</p> <p><b>Description</b> The operating hours assigned to the service territory member. If no operating hours are specified, the member is assumed to use their parent service territory's operating hours. If a member needs special operating hours, create them in Setup and select them in the <code>Operating Hours</code> lookup field on the member's detail page.</p>
PostalCode	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the member's address. Maximum length is 20 characters.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The service resource assigned to the service territory.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The service territory that the service resource is assigned to.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the member's address. Maximum length is 80 characters.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name of the member's address.</p>
TerritoryType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Primary, Secondary, or Relocation.</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>The primary territory is typically the territory where the resource works most often—for example, near their home base. Service resources can only have one primary territory.</li> <li>Secondary territories are territories where the resource can be assigned to appointments if needed. Service resources can have multiple secondary territories.</li> <li>Relocation territories represent temporary moves for service resources. If you're using the Field Service Lightning managed packages with the scheduling optimizer, resources with relocation territories are always assigned to services within their relocation territories during the specified relocation dates; if they don't have a relocation territory, the primary territories are favored over the secondary.</li> </ul> <p>For example, a service resource might have the following territories:</p> <ul style="list-style-type: none"> <li>Primary territory: <i>West Chicago</i></li> <li>Secondary territories: <ul style="list-style-type: none"> <li>- <i>East Chicago</i></li> <li>- <i>South Chicago</i></li> </ul> </li> <li>Relocation territory: <i>Manhattan</i>, for a three-month period</li> </ul>

## Usage

If you delete a service territory with members, the service resources who were members no longer have any connection to the territory.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ServiceTerritoryMemberFeed](#)

Feed tracking is available for the object.

### [ServiceTerritoryMemberHistory](#)

History is available for tracked fields of the object.

## ServiceTerritoryWorkType

Represents the relationship between a ServiceTerritory object and a WorkType object for Lightning Scheduler appointments. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this object.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of this service territory-work type relationship.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the service territory that's related to the work type indicated in the <code>WorkTypeId</code> field.</p>
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the work type that's related to the service territory indicated in the <code>ServiceTerritoryId</code> field.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ServiceTerritoryWorkTypeFeed

Feed tracking is available for the object.

### ServiceTerritoryWorkTypeHistory

History is available for tracked fields of the object.

## SessionPermSetActivation

---

The SessionPermSetActivation object represents a permission set assignment activated during an individual user session. When a SessionPermSetActivation object is inserted into a permission set, an activation event fires, allowing the permission settings to apply to the user's specific session. This object is available in API versions 37.0 and later.

## Supported Calls

`describeCompactLayouts()`, `describeLayout()`, `query()`, `retrieve()`

 **Note:** If you include session-based permission sets in a permission set group, the permissions in them do not require session-based activation for users assigned to the group.

## Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations

## Fields

Field Name	Details
AuthSessionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The session ID related to this permission set assignment for its duration.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The session details, such as device used and browser.</p>

Field Name	Details
PermissionSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The permission set ID related to this permission set assignment and user for its duration.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The user ID of the user to whom this permission set assignment applies for its duration.</p>

## Usage

Use SessionPermSetActivation to create a permission set available only for a specified session's duration. For example, create permission sets that provide access to specific applications only during authenticated sessions.

In the following Apex example, an identified session is activated after session information is submitted via a button. Successful activation results in a confirmation message displayed to the user.

```
public class SessionPermSetActivationController {
    // id of the session permission set to be activated
    private final String sessionPermSetId = 'OPSxx00000004rJ';
    private final String sessionId;

    public SessionPermSetActivationController() {
        Map<String, String> sessionManagement = Auth.SessionManagement.getCurrentSession();

        sessionId = sessionManagement.get('SessionId');
    }

    public PageReference activate() {
        // activate the permission set
        SessionPermSetActivation activation = new SessionPermSetActivation();
        activation.AuthSessionId = sessionId;
        activation.PermissionSetId = sessionPermSetId;
        activation.Description = 'created by SessionPermSetActivationController';

        insert activation;
        return null;
    }
}
```

```

public boolean getActivated() {
    Integer alreadyActivated = [SELECT count()
                               FROM SessionPermSetActivation
                               WHERE AuthSessionId = :sessionId
                               And PermissionSetId = :sessionPermSetId LIMIT
1];
    return alreadyActivated > 0;
}

<apex:page controller="SessionPermSetActivationController">
    <apex:outputPanel rendered="{!Activated}">
        <h3>Activate Session Permission Set</h3>
        <br />
        <apex:form >
            <apex:commandButton action="{!activate}" value="Activate"
id="activateButton"/>
        </apex:form>
    </apex:outputPanel>
    <apex:outputPanel rendered="{!Activated}">
        <h3>Session Permission Set is already active.</h3>
    </apex:outputPanel>
</apex:page>

```

## SetupAuditTrail

---

Represents changes you or other admins made in your org's Setup area for at least the last 180 days. This object is available in API version 15.0 and later.

 **Note:** SetupAuditTrail is not a supported standard controller. Using SetupAuditTrail as a standard controller in a Visualforce page results in an error.

## Supported Calls

query(), retrieve()

 **Note:** Aggregate queries aren't supported on this object. For example, `SELECT count() FROM SetupAuditTrail` works but `SELECT count(Id) FROM SetupAuditTrail` fails.

## Fields

Field	Details
Action	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The category of the change made in Setup. For example, a value of <i>PermSetCreate</i> indicates that an administrator created a permission set. The <i>Display</i> field contains more specific information.</p>
CreatedByContext	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The context under which the Setup change was made. For example, if Einstein uses cloud-to-cloud services to make a change in Setup, the value of this field is <i>Einstein</i>. This field is available in API version 48.0 and later.</p>
CreatedByIssuer	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Reserved for future use.</p>
DelegateUser	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The Login-As user who executed the action in Setup. If a Login-As user didn't perform the action, this field is blank. This field is available in API version 35.0 and later.</p>
Display	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Nillable, Sort</p> <p><b>Description</b></p> <p>The full description of changes made in Setup. For example, if the <i>Action</i> field has a value of <i>PermSetCreate</i>, the <i>Display</i> field has a value like "Created permission set MAD: with user license Salesforce."</p>
Section	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The section in the Setup menu where the action occurred. For example, Manage Users or Company Profile.</p>

 **Note:** You can use SOQL joins to get the information you need more quickly. For example, running `SELECT CreatedBy.Name FROM SetupAuditTrail LIMIT 10` returns the first and last names of the last 10 people to make changes in Setup.

## SetupEntityAccess

Represents the enabled setup entity access settings (such as for Apex classes) for the parent PermissionSet. This object is available in API version 25.0 and later.

To grant users access to an entity, associate the appropriate SetupEntityAccess record with a PermissionSet that's assigned to a user.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

## Fields

Field Name	Details
ParentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the entity's parent PermissionSet.</p>
SetupEntityId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID of the entity for which access is enabled, such as an Apex class or Visualforce page.</p>

Field Name	Details
SetupEntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of setup entity for which access is enabled. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>ApexClass</code> for Apex classes</li> <li>• <code>ApexPage</code> for Visualforce pages</li> <li>• In API version 28.0 and later, <code>ConnectedApplication</code> for OAuth connected apps</li> <li>• In API version 31.0 and later, <code>CustomPermission</code> for custom permissions</li> <li>• In API version 28.0 and later, <code>ServiceProvider</code> for service providers</li> <li>• In API version 28.0 and later, <code>TabSet</code> for apps</li> <li>• In API version 48.0 and later, <code>CustomEntityDefinition</code> for Custom Settings and Custom Metadata Types</li> </ul>

## Usage

Because SetupEntityAccess is a child of the PermissionSet object, the usage is similar to other PermissionSet child objects like FieldPermissions and ObjectPermissions.

For example, the following code returns all permission sets that grant access to any setup entities for which access is enabled:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
```

The following code returns permission sets that grant access only to Apex classes:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE SetupEntityType='ApexClass'
```

The following code returns permission sets that grant access to any setup entities, and are not owned by a profile:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE ParentId
IN (SELECT Id
    FROM PermissionSet
    WHERE isOwnedByProfile = false)
```

You may want to return only those permission sets that have access to a specific setup entity. To do this, query the parent object. For example, this code returns all permission sets that grant access to the `helloWorld` Apex class:

```
SELECT Id, Name,
    (SELECT Id, Parent.Name, Parent.Profile.Name
     FROM SetupEntityAccessItems)
```

```
FROM ApexClass
WHERE Name = 'helloWorld'
```

While it's possible to return permission sets that have access to a `ConnectedApplication`, `ServiceProvider`, or `TabSet` by `SetupEntityId`, it's not possible to return permission sets that have access to these `SetupEntityType` fields by any other `AppMenuItem` attribute, such as `Name` or `Description`. For example, to find out if a user has access to the Recruiting app, you'd run two queries. First, query to get the `AppMenuItem` ID:

```
SELECT Id, Name, Label
FROM AppMenuItem
WHERE Name = 'Recruiting'
```

Let's say the previous query returned the `AppMenuItem` ID `02uD0000000GIiMIAW`. Using this ID, you can now run a query to find out if a user has access to the Recruiting app:

```
SELECT Id, SetupEntityId, SetupEntityType
FROM SetupEntityAccess
WHERE ParentId
IN
  (SELECT PermissionSetId
   FROM PermissionSetAssignment
   WHERE AssigneeId = '005D0000001QOzF')
AND (SetupEntityId = '02uD0000000GIiMIAW')
```

## Shift

---

Represents a shift for service resource scheduling. Available in API versions 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled. Users must have Field Service permission.

## Fields

Field	Details
EndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time that the shift ends.</p>
JobProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The job profile associated with the shift. Available in API versions 47.0 and later.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The label that a shift is given.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed a related record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the current user last viewed this record.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b> The owner of the shift.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the service resource the shift belongs to. Available in API versions 47.0 and later.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the service territory the shift belongs to. Available in API versions 47.0 and later.</p>
ShiftNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The number automatically given to the shift upon creation.</p>
StartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The date and time that the shift starts.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Describes the status of the shift. Users can create custom values. Default values are:</p> <ul style="list-style-type: none"> <li>• Tentative</li> <li>• Published</li> <li>• Confirmed</li> </ul>

Field	Details
StatusCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Describes the status of the shift using static values. This field is derived from <code>Status</code> using the mapping defined in setup.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Tentative</li> <li>• Published</li> <li>• Confirmed</li> </ul>
TimeSlotType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of time slot for the shift. The same setup values as the <code>TimeSlot</code> field in the <code>OperatingHours</code> object.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• Normal (default value)</li> <li>• Extended</li> </ul>

## Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0, and is a pilot feature in API version 47.0.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### ShiftFeed

Feed tracking is available for the object.

### ShiftHistory

History is available for tracked fields of the object.

### ShiftOwnerSharingRule

Sharing rules are available for the object.

### ShiftShare

Sharing is available for the object.

# ShiftHistory

---

Represents the history of changes made to tracked fields on a time sheet. Available in API versions 46.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled in your organization, and field tracking for shift fields must be configured.

## Fields

Field	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The value of the field before it was changed.</p>

Field	Details
ShiftId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the shift being tracked. The history is displayed on the detail page for this record.</p>

## Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

## ShiftOwnerSharingRule

Represents the rules for sharing a shift with user records other than the owner or anyone above the owner in the role hierarchy. Available in API versions 46.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the source group. A time sheet owned by a User in the source Group triggers the rule to give access.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
ServiceResourceAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the User or Group being granted access.</p>

## Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

## ShiftShare

Represents a sharing entry on a field service shift. Available in API versions 46.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the user or group has to the shift. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All (This value isn't valid for create or update calls.)</li> </ul> <p>Set to an access level that is at least equal to the organization's default shift access level.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The shift associated with the sharing entry.</p>
RowCause	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The reason why this sharing entry exists. You can write to this field only when its value is omitted or set to <code>Manual</code> (default). Valid values include:</p> <ul style="list-style-type: none"> <li>• <code>Manual</code>—The user or group has access because a user with “All” access manually shared the shift record.</li> <li>• <code>Owner</code>—The user is the owner of the shift.</li> <li>• <code>Team</code>—The user or group has team access.</li> <li>• <code>Rule</code>—The user or group has access via a shift sharing rule.</li> </ul>
UserOrGroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>(Read only) ID of the user or group that has access to the shift record.</p>

## Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

## ShiftStatus

Represents a shift, such as Tentative, Published, or Confirmed. Available in API versions 46.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an ID or master label.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this is the default shift status value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value can be the default value.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this shift status value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number used to sort this value in the shift status picklist. These numbers are not guaranteed to be sequential, as some previous shift status values might have been deleted.</p>
StatusCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Describes the status of the shift using static values. Possible values are:</p> <ul style="list-style-type: none"> <li>• Tentative</li> <li>• Published</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>Confirmed</li> </ul>

## Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

## Shipment

Represents the transport of inventory in field service.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
ActualDeliveryDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date the product was delivered.</p>
DeliveredToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The person or entity the product was delivered to.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field Name	Details
	<p><b>Description</b> Details not recorded in the provided fields</p>
DestinationLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The place the product is to be delivered.</p>
ExpectedDeliveryDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date the product is expected to be delivered.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the shipment.</p>

Field Name	Details
Provider	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The company or person making the transfer.</p>
ShipFromAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The place the product is coming from.</p>
ShipFromCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the address where the shipment originates.</p>
ShipFromCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the address where the shipment originates.</p>
ShipFromGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy level of the geocode for the address where the shipment originates. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromLatitude	<p><b>Type</b> double</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Longitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Latitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipFromPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the address where the shipment originates.</p>
ShipFromState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the address where the shipment originates.</p>
ShipFromStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street of the address where the shipment originates.</p>

Field Name	Details
ShipToAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The physical address where the shipment is delivered.</p>
ShipToCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the address where the shipment is delivered.</p>
ShipToCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the address where the shipment is delivered.</p>
ShipToGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy level of the geocode for the address where the shipment is delivered. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipToLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Longitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between -90 and 90 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>

Field Name	Details
ShipToLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Latitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between -180 and 180 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
ShipToName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The shipment recipient.</p>
ShipToPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code of the address where the shipment is delivered.</p>
ShipToState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the address where the shipment is delivered.</p>
ShipToStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street of the address where the shipment is delivered.</p>
ShipmentNumber	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the shipment.</p>
SourceLocationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The field service location where the shipment originates.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• <i>Shipped</i>—The product is in transit.</li> <li>• <i>Delivered</i>—The product is at the source location.</li> </ul>
TrackingNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Tracking number for the shipment.</p>
TrackingUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> URL of website used for tracking the shipment.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [ShipmentFeed](#)

Feed tracking is available for the object.

**ShipmentHistory**

History is available for tracked fields of the object.

**ShipmentOwnerSharingRule**

Sharing rules are available for the object.

**ShipmentShare**

Sharing is available for the object.

## SignupRequest

---

Represents a request for a new signup. This object is available in API version 27.0 and later.

 **Note:** You are limited to 20 signups per day. To make additional signups, log a case in the Partner Community.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

Field Name	Details
AuthCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with <code>ConnectedAppCallbackUrl</code> and <code>ConnectedAppConsumerKey</code>, when the specified connected app hasn't been configured with an X.509 certificate. The system provides this read-only field once the sign-up request has been processed. This field is available in API version 29.0 and later.</p>
Company	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The name of the company requesting the trial sign-up.</p>
ConnectedAppCallbackUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>When used with <code>ConnectedAppConsumerKey</code>, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.</p>
<code>ConnectedAppConsumerKey</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>When used with <code>ConnectedAppCallbackUrl</code>, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.</p>
<code>Country</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The default value is the country of the requesting org. If you want to override the default, enter the two-character, upper-case ISO-3166 country code (Alpha-2 code). You can find a full list of these codes at several sites, such as: <a href="https://www.iso.org/obp/ui/#search">https://www.iso.org/obp/ui/#search</a>. The language of the trial organization is auto-determined based on the value of this field.</p>
<code>CreatedOrgId</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The 15-character organization ID of the trial organization created. The system provides this read-only field once the sign-up request has been processed.</p>
<code>CreatedOrgInstance</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The server instance of the new trial organization, for example, "na8." This field is available in API version 29.0 and later.</p>
<code>Edition</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The Salesforce template that is used to create the trial organization. Possible values are Partner Group, Professional, Partner Professional, Sales Enterprise, Professional TSO, Enterprise, Partner Enterprise, Service Professional, Enterprise TSO, Developer, and Partner Developer. This field is available in API version 35.0 and later.</p>
ErrorCode	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The error code if the sign-up request isn't successful. The system provides this read-only field for support purposes.</p>
FirstName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The first name of the admin user for the trial sign-up.</p>
LastName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The last name of the admin user for the trial sign-up.</p>
PreferredLanguage	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The language of the trial organization being created. Specify the language using a language code listed under Fully Supported Languages in <a href="#">Supported Languages</a> in Salesforce Help. For example, use <code>zh_CN</code> for simplified Chinese. The value you select overrides the language set by the locale. If you specify an invalid language, the organization defaults to the default language of the country. Likewise, if you specify a language that isn't supported by the Salesforce edition associated with your trial template, the trial organization defaults to the default language of the country. This field is available in API version 35.0 and later.</p>

Field Name	Details
ResolvedTemplateId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Populated during the sign-up request and for internal use by Salesforce. This field is available in API version 35.0 and later.</p>
ShouldConnectToEnvHub	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> When set to <code>true</code>, the trial organization is connected to the Environment Hub. The sign-up must take place in the hub master organization or a spoke organization. This field is available in API version 35.0 and later.</p>
SignupEmail	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The email address of the admin user for the trial sign-up.</p>
SignupSource	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> A user-specified description of the trial sign-up, up to 60 characters in length. This field is available in API version 36.0 and later.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The status of the request. Possible values are <code>New</code>, <code>In Progress</code>, <code>Error</code>, or <code>Success</code>. The default value is <code>New</code>.</p>
Subdomain	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The subdomain for the new trial organization when it uses a custom My Domain. The maximum length is 33 characters for Developer Edition (DE) and 40 characters for all other editions (because a suffix is appended to all DE organizations).</p>
SuppressSignupEmails	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> When set to <code>true</code>, no sign-up emails are sent when the trial organization is created. This field is used for the Proxy Signup feature, and is available in API version 29.0 and later.</p>
TemplateId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 15-character ID of the Trialforce template that is the basis for the trial sign-up. Salesforce must approve the template. If you don't specify an edition, a template ID is required.</p>
TrialDays	<p><b>Type</b> anyType</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> The duration of the trial sign-up in days. Must be equal to or less than the trial days for the approved Trialforce template. If not provided, it defaults to the trial duration specified for the Trialforce template.</p>
TrialSourceOrgId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 15-character organization ID of the Trialforce Source Organization from which the Trialforce template was created.</p>
Username	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The username of the admin user for the trial sign-up. It must follow the address convention specified in RFC822: <a href="http://www.w3.org/Protocols/rfc822/#z10">www.w3.org/Protocols/rfc822/#z10</a></p>

## Usage

The Java class uses the REST API to create a SignupRequest object. It authenticates to the Trialforce Management Organization and then posts a request to the SignupRequest object.

Here are the variables to specify in this example.

- SERVER — The name of the host server for the Trialforce Management Organization (TMO), for example, `"yourInstance.salesforce.com."`
- USERNAME — The admin username for the TMO.
- PASSWORD — The concatenation of the admin password and the security token for the TMO. To get an email with the security token, from your personal settings in Salesforce select **Reset My Security Token** and click **Reset Security Token**.
- CLIENT\_ID — From Setup in Salesforce, enter *Apps* in the *Quick Find* box, select **Apps**, and click **New** under Connected Apps. Enter values for the required fields (the Callback URL is required but can initially be set to any valid URL as it's not used), grant full access for the OAuth scopes in the "Selected OAuth Scopes" selector, and click **Save**. Then copy the value of "Consumer Key" and use it for this variable.
- CLIENT\_SECRET — On the same page, click **Click to reveal**. Then copy the value of "Consumer Secret" and use it for this variable.

```
public class IsvSignupDriver {
    private static final String SERVER = server_name:port;
    private static final String USERNAME = tmo_username;
    private static final String PASSWORD = tmo_passwordsecurity_token;
    private static final String CLIENT_ID = consumer_key;
    private static final String CLIENT_SECRET = consumer_secret;

    private static SignupRequestInfo signupRequest = null;

    public static String createSignupRequest (SignupRequestInfo sr)
        throws JSONException, IOException {
        JSONObject createResponse = null;
        signupRequest = sr;
        JSONObject loginResponse = login(SERVER, USERNAME, PASSWORD);
        String instanceUrl = loginResponse.getString("instance_url");
        String accessToken = loginResponse.getString("access_token");
        createResponse = create(instanceUrl, accessToken);
        System.out.println("Created SignupRequest object: " + createResponse + "\n");
        return createResponse.toString();
    }

    /* Authenticates to the TMO using the required credentials */

    private static JSONObject login(String server, String username, String password)
```

```

throws ClientProtocolException, IOException, JSONException {
    String authEndPoint = server + "/services/oauth2/token";
    HttpClient httpClient = new DefaultHttpClient();
    try {
        HttpPost post = new HttpPost(authEndPoint);

        List<NameValuePair> params = new ArrayList<NameValuePair>();
        params.add(new BasicNameValuePair("grant_type", "password"));
        params.add(new BasicNameValuePair("client_id", CLIENT_ID));
        params.add(new BasicNameValuePair("client_secret", CLIENT_SECRET));
        params.add(new BasicNameValuePair("username", username));
        params.add(new BasicNameValuePair("password", password));
        post.setEntity(new UrlEncodedFormEntity(params, Consts.UTF_8));

        BasicResponseHandler handler = new BasicResponseHandler();
        String response = httpClient.execute(post, handler);
        return new JSONObject(response);
    } finally {
        httpClient.getConnectionManager().shutdown();
    }
}
/* Posts a request to the SignupRequest object */

private static JSONObject create(String instanceUrl, String accessToken)
throws ClientProtocolException, IOException, JSONException {
    HttpClient httpClient = new DefaultHttpClient();
    try {
        HttpPost post = new HttpPost(instanceUrl +
            "/services/data/v27.0/subjects/SignupRequest/");
        post.setHeader("Authorization", "Bearer " + accessToken);
        post.setHeader("Content-Type", "application/json");

        JSONObject requestBody = new JSONObject();
        requestBody.put("TemplateId", signupRequest.getTemplateID());
        requestBody.put("SignupEmail", signupRequest.getEmail());
        requestBody.put("username", signupRequest.getUsername());
        requestBody.put("Country", "US");
        requestBody.put("Company", signupRequest.getCompanyName());
        requestBody.put("lastName", signupRequest.getLastName());

        StringEntity entity = new StringEntity(requestBody.toString());
        post.setEntity(entity);
        BasicResponseHandler handler = new BasicResponseHandler();
        String response = httpClient.execute(post, handler);
        return new JSONObject(response);
    } finally {
        httpClient.getConnectionManager().shutdown();
    }
}
}

```

## Error Codes

If the sign-up fails, the system generates an error code that can help you identify the cause. This table shows the most important error codes.

Error Code	Description
C-1007	Duplicate username.
C-1015	Error while establishing the new org's My Domain (subdomain) settings. Contact Salesforce support for assistance.
C-1016	Error while configuring the OAuth connected app for Proxy Signup. Verify that your connected app has a valid consumer key, callback URL, and unexpired certificate (if applicable).
C-1018	Invalid subdomain value provided during signup.
C-1019	Subdomain in use. Choose a new subdomain value.
C-1020	Template not found. Either the template doesn't exist (or it was deleted).
C-1033	Template is the wrong version.
C-9999	Generic "fatal error." Contact Salesforce support for assistance.
S-1006	Invalid email address (not in a proper email address format).
S-1014	Invalid or missing parameters during signup process. Possible solutions include: <ul style="list-style-type: none"> <li>• Be sure to indicate a valid Callback URL.</li> <li>• If indicated, be sure to provide both a ConsumerKey and Callback URL.</li> </ul> For scratch orgs, be sure that you indicate only supported features in scratch org definition file.
S-1017	Namespace isn't registered with a release org associated with the Dev Hub.
S-1018	Invalid My Domain (subdomain) name. Select a name that doesn't: <ul style="list-style-type: none"> <li>• Contain double hyphens</li> <li>• End in a hyphen</li> <li>• Include restricted words</li> <li>• Exceed 40 characters (33 for Developer Edition)</li> </ul>
S-1019	My Domain (subdomain) already in use.
S-1026	Invalid namespace. Namespaces must begin with a letter, must not contain consecutive underscores, cannot be a restricted or reserved namespace, and must be 15 characters or fewer.
S-2006	Invalid country.
T-0001	Template ID not valid (not in the format OTTxxxxxxxxxxx).
T-0002	Template not found. Either the template doesn't exist (or it was deleted).
T-0003	Template not approved for use by Salesforce.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### SignupRequestFeed

Feed tracking is available for the object.

### SignupRequestHistory

History is available for tracked fields of the object.

### SignupRequestOwnerSharingRule

Sharing rules are available for the object.

### SignupRequestShare

Sharing is available for the object.

## Site

---

Represents a public website that is integrated with an org. This object is available in API version 16.0 and later.

To access this object, Salesforce Sites, Sites, or Site.com must be enabled for your organization.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

Field	Description
AdminId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The site administrator designated as the contact for the site. This user receives site-related communications from site visitors and from Salesforce.</p>
AnalyticsTrackingCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Description
	<p><b>Description</b></p> <p>The tracking code associated with your site. This code can be used by services like Google Analytics to track page request data for your site.</p>
ClickjackProtectionLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Sets the clickjack protection level. The options are:</p> <ul style="list-style-type: none"> <li>• <code>AllowAllFraming</code>—Allow framing by any page (no protection)</li> <li>• <code>SameOriginOnly</code>—Allow framing by the same origin only (recommended)</li> <li>• <code>NoFraming</code>—Don't allow framing by any page (most protection)</li> </ul> <p>This field is available in API version 30.0 and later.</p>
DailyBandwidthLimit	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The rolling 24-hour daily bandwidth limit for the sites in your organization.</p>
DailyBandwidthUsed	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The current rolling 24-hour daily bandwidth usage for the sites in your organization.</p>
DailyRequestTimeLimit	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The rolling 24-hour daily service request time limit for the sites in your organization. Service request time is calculated as the total server time in minutes required to generate pages for the site.</p>
DailyRequestTimeUsed	<p><b>Type</b></p> <p>int</p>

Field	Description
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The current rolling 24-hour daily service request time for the sites in your organization.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> An optional description of the site.</p>
GuestRecordDefaultOwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A user in the Salesforce org that is the default owner of records created by unauthenticated (guest) users.</p>
GuestUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The site or Salesforce Communities specific user that anonymous, unauthenticated users run as when interacting with the site.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the site as it appears in the user interface.</p>
MonthlyPageViewsEntitlement	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Description
	<p><b>Description</b></p> <p>The number of page views allowed for the current calendar month for the sites in your organization.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The name used when referencing the site in the API.</p>
OptionsAllowGuestSupportApi	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option to enable unauthenticated users to access the Support API.</p>
OptionsAllowHomePage	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option to enable the standard page associated with the Home tab (/home/home.jsp).</p>
OptionsAllowStandardAnswersPages	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option to enable standard pages associated with an answers community. If you want to use default Answers pages (such as AnswersHome), enable these pages.</p>
OptionsAllowStandardIdeasPages	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option to enable standard pages associated with an Ideas community. If you want to use default Ideas pages (such as IdeasHome), enable these pages.</p>

Field	Description
OptionsAllowStandardLookups	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The option to enable the standard lookup pages. These are the popup windows associated with lookup fields on Visualforce pages.</p>
OptionsAllowStandardPortalPages	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The option to enable authenticated users to access the standard Salesforce pages.</p>
OptionsAllowStandardSearch	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The option to enable the standard search pages. To allow public users to perform standard searches, enable these pages.</p>
OptionsBrowserXssProtection	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The option to enable the browser's cross-site scripting protection.</p>
OptionsContentSniffingProtection	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The option to enable content-sniffing protection.</p>
OptionsCspUpgradeInsecureRequests	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p>

Field	Description
	<p><b>Description</b></p> <p>The option to upgrade all requests to HTTPS (Content Security Policy : Upgrade Insecure Requests).</p>
OptionsEnableFeeds	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option that displays the Syndication Feeds related list, where you can create and manage syndication feeds for users on your public sites. This field is visible only if you have the feature enabled for your organization.</p>
OptionsReferrerPolicyOriginWhenCrossOrigin	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>The option to enable referrer policy (origin-when-cross-origin).</p>
OptionsRequireHttps	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>When true, the site requires secure connections. When false, the site operates normally via insecure connections instead of redirecting to a secure connection.</p>
SiteType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Identifies whether the site is a Visualforce (Salesforce Sites) or a Site.com site. <code>SiteType</code> is available in API version 21.0 and later. In API version 26.0 and later, if Salesforce communities is enabled for your organization, the site could also be a Network Visualforce or Network Site.com site.</p>
Status	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p>

Field	Description
	<p><b>Description</b></p> <p>The status for the site. For example, <code>Active</code> or <code>In Maintenance</code>.</p>
<code>Subdomain</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The Salesforce domain that you registered for your site. For example, if your domain is <code>mycompany.force.com</code>, then <code>mycompany</code> is the subdomain.</p>
<code>TopLevelDomain</code>	<p><b>Type</b></p> <p>url</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>The optional branded custom Web address that you registered with a third-party domain name registrar. The custom Web address acts as an alias to your Salesforce address.</p> <p>Beginning with API version 21.0, <code>TopLevelDomain</code> is no longer available. Instead, use the <a href="#">Domain</a> and <a href="#">DomainSite</a> objects.</p>
<code>UrlPathPrefix</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The unique Salesforce URL that the public uses to access this site.</p>

## Usage

Use this read-only object to query or retrieve information on your Salesforce site.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### SiteFeed

Feed tracking is available for the object.

### SiteHistory

History is available for tracked fields of the object.

## SiteDetail

---

Represents the details of a site/community. Available in API Version 38.0 and later.

### Supported SOAP Calls

`describeSObjects()`, `query()`

### Supported REST HTTP Methods

GET

### Fields

Field	Details
DurableId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Site object.</p>
IsRegistrationEnabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the site allows users to sign up.</p>
SecureUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL of the website.</p>

**Note:** SiteDetail fields are exposed in SOAP API version 45.0 and later. You can use Tooling API to query for SiteDetail fields in guest user mode in API version 44.0 and earlier. In API version 45.0 and later, use SOAP API to get this data in guest user mode. SiteDetail is still exposed in Tooling API to User Profiles with the ViewSetup permission.

## SiteDomain

---

SiteDomain is a read-only object, and a one-to-many replacement for the Site.TopLevelDomain field. This object is available in API version 21.0, and has been deprecated as of API version 26.0. In API version 26.0 and later, use the [Domain](#) and [DomainSite](#) objects instead.

To access this object, Salesforce Sites, Sites, or Site.com must be enabled for your organization.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

Field	Description
Domain	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain.</p>
SiteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the associated Site.</p>
DomainType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Sort, Nillable</p>

Field	Description
	<p><b>Description</b></p> <p>The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS. This field is available in version 24.0 of the API.</p>

## Usage

Use this read-only object to query the custom Web addresses that are associated with each website in your organization.

## SiteHistory

Represents the history of changes to the values in the fields of a site. This object is generally available in API version 18.0 and later.

To access this object, Salesforce Sites must be enabled for your organization.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

Field	Details
<code>DataType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
<code>Field</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>

Field	Details
newValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
oldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The last value of the field before it was changed.</p>
siteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the associated Site.</p>

## SiteframeWhitelistUrl

---

Represents a list of external domains that you want to allow to frame your site or community pages. This object is available in API version 44.0 and later.

### Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()` `upsert()`

### Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

## Fields

Field Name	Details
SiteId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the site to include in the inline frame.</p>
Url	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The domain to be whitelisted. Accepts these formats: example, example.com, *example.com, and http://example.com.</p>

## Skill

Represents a category or group that Chat users or field service resources can be assigned to. This object is available in API version 24.0 and later.

 **Note:** For information about WDC skills on a user's profile, see the [ProfileSkill](#) topic.

## Supported Calls

`create()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`, `search()`

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable</p> <p><b>Description</b> The description of the skill.</p>
DeveloperName	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language of the skill.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed the skill.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the skill.</p>

## Usage

### Chat

Use this object to assign Chat users to groups based on their abilities. The skills associated with a LiveChatButton determine which agents receive chat requests that come in through that button.

**Field Service Lightning**

Use this object to track certifications and areas of expertise in your workforce. After you create a skill, you can:

- Assign it to a service resource via the Skills related list on the resource's detail page. When you assign a skill to a service resource, you can specify their skill level and the duration of the skill.
- Add it as a required skill via the Skill Requirements related list on any work type, work order, or work order line item. When you add a required skill to a work record, you can specify the skill level.

## SkillProfile

---

Represents a join between Skill and Profile. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

## Fields

Field Name	Details
<code>ProfileId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the profile.</p>
<code>SkillId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the skill.</p>

## Usage

Use this object to assign specific skills to specific profiles.

# SkillRequirement

---

Represents a skill that is required to complete a particular task in Field Service Lightning and Lightning Scheduler. Skill requirements can be added to work types, work orders, and work order line items in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later. You also can add skill requirements to work items in Omni-Channel skills-based routing using API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

If you want to use SkillRequirement for Field Service use cases, then Field Service Lightning must be enabled.

If you want to use SkillRequirement only for Omni-Channel skills-based routing use cases, then you don't need Field Service Lightning to be enabled.

## Fields

Field Name	Details
IsAdditionalSkill	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates that a skill is additional. After a designated timeout period, a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
RelatedRecordId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The record that the skill is required for. The related record can be a work order, work order line item, work type, or pending service routing record.</p>
SkillId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The skill that is required.</p>
SkillLevel	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The level of the skill required. Skill levels can range from zero to 99.99. Depending on your business needs, you might want the skill level to reflect years of experience, certification levels, or license classes.</p>
SkillNumber	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>An auto-generated number identifying the skill requirement.</p>
SkillPriority	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Aggregatable, Create, Filter, Group, Nillable, Sort, Update</p>

**Field Name****Details****Description**

For additional skills, specify the order in which skills are dropped if after the specified timeout no agent with that skill is available. Higher priority-value skills are dropped first. Lower priority-value skills, for example 0, are dropped last. Skills with the same priority value are dropped as a group. You can set skill priority using attribute setup for skills-based routing or Apex code.

## Usage

Skill requirements help dispatchers assign work orders to service resources with the proper expertise. You can still assign a work order, work order line item, or related service appointment to a service resource that does *not* possess the specified skills, so skill requirements serve more as a suggestion than a rule.

**Note:** If you're using the Field Service Lightning managed package, use matching rules to ensure that appointments are only assigned to service resources who possess the skills listed on the parent work order.

If many of your work orders require the same skills, add skill requirements to work types to save time and keep your processes consistent. When you add a skill requirement to a work type, work orders and work order line items that use that type automatically inherit the skill requirement. For example, if all annual maintenance visits for your Classic Refrigerator product require a Refrigerator Maintenance skill level of at least 50, add that skill requirement to the Annual Maintenance Visit work type. When you create a work order for a customer's annual fridge maintenance, applying that work type adds the skill requirement as well.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**SkillRequirementFeed**

Feed tracking is available for the object.

**SkillRequirementHistory**

History is available for tracked fields of the object.

## SkillUser

Represents a join between Skill and User. This object is available in API version 24.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

## Fields

Field Name	Details
SkillId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the skill.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user.</p>

## Usage

Use this object to assign specific skills to specific users.

## SlaProcess

---

Represents an entitlement process associated with an Entitlement. This object is available in API version 19.0 and later.

An entitlement process is a timeline that includes all the steps (MilestoneType records) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`, `describeLayout()`

## Special Access Rules

As of Summer '20 and later, only Salesforce admin users, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

## Fields

Field	Details
BusinessHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> A description of the entitlement process.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the entitlement process is active (<code>true</code>) or not (<code>false</code>).</p>
IsVersionDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the entitlement process is the default version (<code>true</code>) or not (<code>false</code>).  This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the SlaProcess was last viewed.</p>

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, idLookup</p> <p><b>Description</b> The name of the entitlement process.</p>
NameNorm	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The read-only value for the unique name of the entitlement process or the entitlement process version. If entitlement versioning is enabled, this value is automatically generated for each version of an entitlement process in this form: <i>process name+_v + x</i>, where <i>x</i> is the version number (for example, "gold_support_v2"). If entitlement versioning isn't enabled, this value is the same as Name.  This field is available in API version 28.0 and later.</p>
SObjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Restricted picklist, Filter, Group, Sort</p> <p><b>Description</b> The type of records that the entitlement process can run on. Its values are:</p> <ul style="list-style-type: none"> <li>• <i>Case</i></li> <li>• <i>Work Order</i></li> </ul> <p>An entitlement process runs only on records that match its type. For example, a Case entitlement process that's applied to an entitlement runs only on cases associated with the entitlement, not on work orders. As a best practice, therefore, manage customers' work orders and cases on separate entitlements.  The field label in the user interface is Entitlement Process Type.</p>
StartDateField	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Restricted picklist</p> <p><b>Description</b> The criteria for cases to enter the entitlement process. Cases can enter the process based on:</p> <ul style="list-style-type: none"> <li>• The creation date on a case</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>A custom date/time field on a case</li> </ul>
VersionMaster	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Identifies the sequence of versions to which this entitlement process belongs. This field's contents can be any value as long as it is identical among all versions of the entitlement process.</p> <p>This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>
VersionNotes	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The description of the entitlement process version.</p> <p>This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>
VersionNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The version number of the entitlement process. Must be 1 or greater.</p> <p>This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>

## Usage

Use this object to query entitlement processes on entitlements.

# Snippet

---

Represents a snippet, which is a container for rich text that can be reused across Pardot emails and email templates. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Snippets are available in Pardot accounts with the Sales, CRM, or Service permission set license.

## Fields

Field	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the snippet. Limited to 32 KB.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. This field value is unique to your org and is required for a Snippet to be resolved in marketing content. Label is <b>API Name</b>.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Required. The name of the snippet.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The type of content a snippet includes. Allowable values are: Date, Image, Link, Text. This field is for organizational purposes.</p>
Value	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>The body content of a snippet. This field can contain plain or rich text. The value of a snippet is resolved when a marketing email is sent. The field does not support emojis, HTML, or image files.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [SnippetFeed](#)

Feed tracking is available for the object.

## SnippetAssignment

Represents a relationship between a snippet and a campaign. Assignments are required to use snippet content in Pardot emails and email templates. A snippet can be assigned to more than one campaign. This object is available in API version 47.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Snippets are available in Pardot accounts with the Sales, CRM, or Service permission set license.

## Fields

Field	Details
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the parent object</p>
SnippetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the related snippet record</p>

## SocialPersona

Represents a snapshot of a contact's profile on a social network such as Facebook or Twitter. This object is available in API version 22.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
AreWeFollowing	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Specifies whether a Salesforce social account is following the social persona or not.</p>
AuthorLabels	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Comma-separated list of author type tags.</p>
AvatarURL	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Retrieves the user's social network avatar.</p>
Bio	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Biography of the social persona.</p>
ExternalId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the social persona on the social network.</p>
ExternalPictureURL	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> URL to the picture of the social persona on the social network.</p>

Field Name	Details
Followers	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of followers that the social persona has.</p>
Following	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of people that the social persona is following.</p>
InfluencerScore	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Radian6 score describing the influence of the social persona. No longer used.</p>
IsBlacklisted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Specifies whether the social persona is blacklisted or not.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Specifies whether the social persona supplies the default avatar image that's displayed on the contact or account.</p>
IsFollowingUs	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Specifies whether the social persona is following a Salesforce social account or not.</p>
IsVerified	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Specifies whether the social persona is verified or not.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when the social persona was last referenced.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date and time when the social persona was last viewed.</p>
ListedCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Radian6 field. No longer used.</p>
MediaProvider	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Social network of the social persona.</p>
MediaType	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Social network type of the social persona.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the social persona.</p>
NumberOfFriends	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of friends that the social persona has.</p>
NumberOfTweets	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of tweets made by the social persona.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the contact parent record for the social persona.</p>
ProfileType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of profile. Values are:</p> <ul style="list-style-type: none"><li>• Person</li><li>• Page</li></ul>

Field Name	Details
ProfileUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> URL for the profile.</p>
Provider	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Social network, such as Facebook or Twitter, of the social persona.</p>
R6SourceId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the social persona in Social Studio.</p>
RealName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Real name of the social persona.</p>
SourceApp	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Salesforce product that created the social persona.</p>
TopicType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of topic, such as keyword or managed.</p>

## Usage

The fields on a SocialPersona object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected a post from the social persona. Many of the Radian6-related fields are no longer accurate or used.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **SocialPersonaHistory** (API version 26.0)

History is available for tracked fields of the object.

## SocialPost

---

Represents a snapshot of a post on a social network such as a Facebook or Twitter. This object is available in API version 23.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
AnalyzerScore	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Score set on the social post in Social Studio.</p>
AssignedTo	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> User in Social Studio that the social post is assigned to.</p>
AttachmentType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of the first attachment on the social post. Values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>• APPLICATION</li> <li>• AUDIO</li> <li>• IMAGE</li> <li>• LINK</li> <li>• TEXT</li> <li>• UNKNOWN</li> <li>• VIDEO</li> </ul>
AttachmentUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> URL for the first attachment on the social post.</p>
Classification	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Classification for the social post, such as inquiry or customer case.</p>
CommentCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of comments on the social post.</p>
Content	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Body of the social post.</p>
DeletedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<b>Description</b> If the social post is deleted, ID of the person who deleted the social post.
EngagementLevel	<b>Type</b> picklist <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Engagement level of the social post, such as reviewed or resolved.
ExternalPostId	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> ID of the social post in its social network.
Handle	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Handle of the person who posted the social post.
HarvestDate	<b>Type</b> dateTime <b>Properties</b> Create, Filter, Nillable, Sort, Update <b>Description</b> Date and time when Social Studio collected the social post.
Headline	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> Headline of the social post.
HiddenById	<b>Type</b> reference <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	<p><b>Description</b> If the social post is hidden, ID of the person who hid it.</p>
InboundLinkCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of links on the inbound social post.</p>
IsOutbound	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether the social post is outbound or not.</p>
KeywordGroupName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Radian6 field that is no longer used.</p>
Language	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Language of the social post.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Date when the social post was last referenced.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> Date when the social post was last viewed.</p>
LikedBy	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the managed social account in the social network that liked the social post.</p>
LikesAndVotes	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Radian6 number of likes and votes on the social post.</p>
MediaProvider	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Social network of the social post.</p>
MediaType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of social network of the social post.</p>
MessageType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of message. Values are:</p> <ul style="list-style-type: none"> <li>• <code>Comment</code>—Facebook comment</li> <li>• <code>Direct</code>—Twitter direct message</li> <li>• <code>Post</code>—Facebook post</li> <li>• <code>Private</code>—Facebook private message</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Reply—Twitter or Facebook reply</li> <li>• Retweet—Twitter retweet</li> <li>• Tweet—Twitter tweet</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the social post.</p>
Notes	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Notes added by Social Hub actions for the social post.</p>
OutboundSocialAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the social account used for outbound social posts.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the social post.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the parent record of the social post, for example, the ID of a case.</p>
PersonaId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the social persona who made the post.</p>
PostPriority	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Priority of the social post set in Social Studio.</p>
PostTags	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Comma-separated list of tags on the social post.</p>
PostUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> URL for the social post.</p>
Posted	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Sort, Update</p> <p><b>Description</b> Date and time when the social post was made.</p>
Provider	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Social network of the social post.</p>
R6PostId	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> Unique ID of the post in Social Studio.</p>
R6SourceId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the author in Social Studio.</p>
R6TopicId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID for either the topic profile or the managed account in Social Studio.</p>
Recipient	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the recipient of the social post in Social Studio.</p>
RecipientType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Type of the recipient of the social post, such as a person.</p>
ReplyToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Dynamically generated from replyToExternalPostId in Social Studio.</p>
ResponseContextExternalId	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> External ID, such as a conversation ID, author ID, or post ID, for the item you're responding to.</p>
ReviewScale	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Review scale for the social post.</p>
ReviewScore	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Review score for the social post.</p>
ReviewedStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Status of the social post review.</p>
Sentiment	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Sentiment of the social post. Values are:</p> <ul style="list-style-type: none"> <li>• Negative</li> <li>• Neutral</li> <li>• Positive</li> <li>• SomewhatNegative</li> <li>• SomewhatPositive</li> </ul>
Shares	<p><b>Type</b> int</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of times the social post has been shared.</p>
SourceTags	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Comma-separated list of author type tags.</p>
SpamRating	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Spam rating of the social post. Values are:</p> <ul style="list-style-type: none"> <li>• NotSpam</li> <li>• Spam</li> </ul>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Status of the social post. Values are:</p> <ul style="list-style-type: none"> <li>• DELETED</li> <li>• FAILED</li> <li>• HIDDEN</li> <li>• PENDING</li> <li>• PENDING_APPROVAL</li> <li>• RECALL_APPROVAL</li> <li>• REJECTED_APPROVAL</li> <li>• REPLIED</li> <li>• SENT</li> <li>• UNKNOWN</li> </ul>
StatusMessage	<p><b>Type</b> textarea</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Status message for the social post.</p>
ThreadSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Radian6 field. No longer used.</p>
TopicProfileName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of the topic profile for the social post in Social Studio.</p>
TopicType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of topic. Values are:</p> <ul style="list-style-type: none"> <li>• Keyword</li> <li>• Managed</li> </ul>
TruncatedContent	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Truncated content of the social post.</p>
UniqueCommentors	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of unique people who commented on the social post.</p>

Field Name	Details
ViewCount	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Number of times the social post was viewed.</p>
WhoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Polymorphic ID of a person such as a lead or a contact.</p>

## Usage

The fields on a SocialPost object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected the post from the social network. Many of the Radian6-related fields are no longer accurate or used.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **SocialPostFeed (API version 26.0)**

Feed tracking is available for the object.

### **SocialPostHistory (API version 26.0)**

History is available for tracked fields of the object.

### **SocialPostOwnerSharingRule**

Sharing rules are available for the object.

### **SocialPostShare**

Sharing is available for the object.

## Solution

---

Represents a detailed description of a customer issue and the resolution of that issue.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
IsHtml	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the Solution is an HTML solution (<code>true</code>) or not (<code>false</code>).</p>
IsOutOfDate	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Read-only field that indicates whether a solution master has been updated since the translated version was created (<code>true</code>) or not (<code>false</code>). Note that this field does not appear in the page layout of master solutions.</p>
IsPublished	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the Solution has been published (<code>true</code>) or not (<code>false</code>). A solution's published state does not affect how it can be used, or whether you can query, update, or delete it. Label is <b>Public</b>.</p> <p> <b>Note:</b> Prior to Spring '14, the label was <b>Visible in Self-Service Portal</b>.</p>
IsPublishedInPublicKb	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the Solution has been published as a Public Solution (<code>true</code>) or not (<code>false</code>). Label is <b>Visible in Public Knowledge Base</b>.</p> <p>This field only applies to solutions, not articles in the public knowledge base.</p>
IsReviewed	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Indicates whether the Solution has been reviewed (<code>true</code>) or not (<code>false</code>). This flag can only be set indirectly via the <code>Status</code> picklist. Each predefined <code>Status</code> value implies an <code>IsReviewed</code> value. Label is <b>Reviewed</b>.</p>
LastReferencedDate	<p><b>Type</b></p> <p>datetime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b></p> <p>datetime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the User who owns the Solution.</p>
ParentId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Update</p> <p><b>Description</b></p> <p>ID of the master solution, if this is the translation of a master solution.</p>

Field	Details
RecordTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> ID of the RecordType to which the Solution is associated.</p>
SolutionLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> The language that the solution is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>.</p>
SolutionName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. If a client application creates a new Solution and a value for this field is unspecified, a hyphen (-), the default value for this field, is used. Limit: 255 characters. Label is <b>Title</b>.</p>
SolutionNote	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The details of the Solution record. Limit: 32,000 characters. Label is <b>Solution Details</b>.</p> <p> <b>Note:</b> If you have HTML Solutions enabled, any HTML tags used in this field are verified before the object is created or updated. If invalid HTML is entered, an error is thrown. Any JavaScript used in this field is removed before the object is created or updated.</p>
SolutionNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An identifying number that is assigned automatically when a solution is created. It can't be set directly, and it can't be modified.</p>

Field	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The status of the solution. Directly controls the <code>IsReviewed</code> value. To obtain the status values in the picklist, a client application can query the <code>SolutionStatus</code>.</p>
TimesUsed	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Number of times this solution has been used. Label is <b>Num Related Case</b>.</p>

## Usage

Use this object to manage your organization's solutions. Client applications can create, update, delete, and query Attachment records associated with a solution.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### **SolutionFeed** (API version 18.0)

Feed tracking is available for the object.

### **SolutionHistory**

History is available for tracked fields of the object.

SEE ALSO:

[CategoryData](#)

[CategoryNode](#)

## SolutionStatus

---

Represents the status of a Solution, such as Draft, Reviewed, and so on.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this is the default solution status value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value can be the default value.</p>
IsReviewed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this solution status value represents a reviewed Solution (<code>true</code>) or not (<code>false</code>). Multiple solution status values can represent a reviewed Solution.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this solution status value. This display value is the internal label that does not get translated.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number used to sort this value in the solution status picklist. These numbers are not guaranteed to be sequential, as some previous solution status values might have been deleted.</p>

## Usage

This object represents a value in the solution status picklist. The solution status picklist provides additional information about the status of a Solution, such as whether a given status value represents a reviewed or unreviewed solution. Your client application can query this object to retrieve the set of values in the solution status picklist, and then use that information while processing Solution objects to determine more information about a given solution. For example, the application could test whether a given case has been reviewed or not based on its `Status` value and the value of the `IsReviewed` property in the associated SolutionStatus record.

[Solution](#)

## SolutionTag

---

Associates a word or short phrase with a Solution.

## Supported Calls

`create()`, `delete()`, `describeSOjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the tagged item.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter</p>

Field Name	Details
	<p><b>Description</b></p> <p>ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Restricted picklist</p> <p><b>Description</b></p> <p>Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

SolutionTag stores the relationship between its parent TagDefinition and the Solution being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

## SOSDeployment

Represents the general settings for deploying SOS video call capability in a native mobile application. This object is available in API version 34.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p>

**Field Name****Details****Description**

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

Language

**Type**

picklist

**Properties**

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

**Description**

The language of the deployment.

MasterLabel

**Type**

string

**Properties**

Create, Filter, Group, Sort, Update

**Description**

The name of the deployment.

OptionsIsBackwardFacingCameraEnabled

**Type**

boolean

**Properties**

Create, Filter, Update

**Description**

Determines whether customers can use the backwards-facing camera on their mobile devices to talk to SOS agents.

OptionsIsEnabled

**Type**

boolean

**Properties**

Create, Filter, Update

**Description**

Determines whether the deployment is enabled for customers to request new SOS video calls.

Field Name	Details
OptionsIsVoiceOnlyMode	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Determines whether video functionality is disabled for customers, making it so customers can only talk to SOS agents using only audio.</p>
QueueId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the queue that's associated with the SOS deployment.</p>

## Usage

Use this object to query and manage SOS deployments.

## SOSSession

This object is automatically created for each SOS session and stores information about the session. This object is available in API versions 34.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
AppVersion	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The version of the customer's mobile application in which SOS is implemented.</p>
CaseId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the case that's associated with the SOS session.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the contact that's associated with the SOS session.</p>
DeploymentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the SOS deployment that the SOS session originated from.</p>
EndTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time that the SOS session ended.</p>
IpAddress	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> To protect the customer's privacy, this field is now blank.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the session record was last referenced by a user.</p>
LastViewedDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the session record was last viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> The name of the session.</p>
OpentokSession	<p><b>Type</b> encryptedstring</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The ID of the OpenTok session that's associated with the SOS video call.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the session record's owner.</p>
SessionDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The amount of time that the SOS session lasted.</p>
SessionRecordingUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The URL where the SOS session recording is stored.</p>
SosVersion	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The version of SOS that was used in your organization's mobile application when this session occurred.</p>
StartTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time that the SOS session began.</p>
SystemInfo	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Information about the customer's mobile device from which the SOS call originated, such as the device's operating system.</p>
WaitDuration	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The amount of time the customer waited before an agent accepted the SOS session and the call began.</p>

## Usage

Use this object to query and manage SOS session records.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [SOSSessionFeed](#)

Feed tracking is available for the object.

### [SOSSessionHistory](#)

History is available for tracked fields of the object.

**SOSSessionOwnerSharingRule**

Sharing rules are available for the object.

**SOSSessionShare**

Sharing is available for the object.

## SOSSessionActivity

---

Captures information about specific events that occur during an SOS video call, such as when an SOS call begins or ends. This object is available in API version 34.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
ActivityTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Sort</p> <p><b>Description</b> The time at which the activity occurred.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, idLookup, Filter, Sort</p> <p><b>Description</b> The name of the activity.</p>
SessionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the SOS session that's associated with the event.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p>

**Field Name****Details****Description**

The kind of activity that occurred.

## Usage

Use this object to query and manage SOS session activities.

## Stamp

Represents a User Specialty. This object is available in API version 39.0 and later.

Create User Specialty labels. Specialties can be any term you want, up to 50 characters, including spaces and underscores.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

**Field****Description**

Description

**Type**

string

**Properties**

Filter, Group, Nillable, Sort

**Description**

Use this field to describe what the user specialty means and how it applies to a user. You have a 255 character maximum including spaces and underscores.

MasterLabel

**Type**

string

**Properties**

Filter, Group, Sort

**Description**

The User Specialty label that appears under the user's profile picture. You can create any label you want as long as it's within the 50 character maximum, including spaces and underscores.

ParentId

**Type**

reference

**Properties**

Filter, Group, Sort

Field	Description
	<p><b>Description</b></p> <p>The id of the org or network.</p>

## StampAssignment

---

Represents assignment of a User Specialty to a user. This object is available in API version 39.0 and later.

Assign a User Specialty to users. This label appears beneath their profile photo.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
StampId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The unique id generated when creating a user specialty.</p>
SubjectId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>The id for the user getting the User Specialty label.</p>

## StaticResource

---

Represents a static resource that can be used in Visualforce markup.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

Field	Details
Body	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Required. Encoded file data.</p>
BodyLength	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Size of the file (in bytes).</p>
CacheControl	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The sharing policy for the static resource when cached. The cache control can have one of the following values:</p> <ul style="list-style-type: none"> <li>• <i>Private</i> specifies that the static resource data cached on the Salesforce server shouldn't be shared with other users. The static resource is only stored in cache for the current user's session.</li> <li>• <i>Public</i> specifies that the static resource data cached on the Salesforce server be shared with other users in your organization for faster load times.</li> </ul>
ContentType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Type of content. Label is <b>Mime Type</b>. Limit: 120 characters.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b> Text description of the static resource. Limit: 255 characters.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name of the static resource.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul> <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>

## Usage

Use static resources to upload content that you can reference in Visualforce markup, including archives (such as .zip and .jar files), images, stylesheets, JavaScript, and other files. Using a static resource is preferable to uploading a file to the Documents tab because:

- You can package a collection of related files into a directory hierarchy and upload that hierarchy as a .zip or .jar archive.
- You can reference a static resource in page markup by name using the `$Resource` global variable instead of hard-coding document IDs.

## Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

## Maximum Static Resource Size

You can create or update static resources to a maximum size of 5 MB. An organization can have up to 250 MB of static resources, total.

## StoreIntegratedService

---

Represents an integration service used to map integrations to a store. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The StoreIntegratedService object is available only if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The standard code for the currency. Possible values are:</p> <ul style="list-style-type: none"> <li>• GBP—British Pound</li> <li>• USD—U.S. Dollar</li> </ul>

Field	Details
Integration	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The ID of the external service. Possible values are:</p> <ul style="list-style-type: none"> <li>• Flow__Checkout_Flow_Template</li> <li>• Flow__sfdc_checkout__ActivateOrder</li> <li>• Flow__sfdc_checkout__CartToOrder</li> <li>• Flow__sfdc_checkout__CheckoutSession</li> <li>• Flow__sfdc_checkout__CheckoutSummary</li> <li>• Flow__sfdc_checkout__CheckoutTemplate</li> <li>• Flow__sfdc_checkout__ConfirmPrice</li> <li>• Flow__sfdc_checkout__DebugCheckout</li> <li>• Flow__sfdc_checkout__Error</li> <li>• Flow__sfdc_checkout__Inventory</li> <li>• Flow__sfdc_checkout__OrderConfirmation</li> <li>• Flow__sfdc_checkout__PaymentBillingAddress</li> <li>• Flow__sfdc_checkout__ResetCheckout</li> <li>• Flow__sfdc_checkout__ShippingAddress</li> <li>• Flow__sfdc_checkout__ShippingCost</li> <li>• Flow__sfdc_checkout__Taxes</li> <li>• Flow__sfdc_checkout__UpdateCheckoutState</li> <li>• Flow__testingText</li> <li>• Price__B2B_STOREFRONT__StandardPricing</li> </ul>
ServiceProviderType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The type of integration service provider. Possible values are:</p> <ul style="list-style-type: none"> <li>• Flow</li> <li>• Inventory</li> <li>• Payment</li> <li>• Price</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• Shipment</li> <li>• Tax</li> </ul>
StoreId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique ID for the store.</p>

## Reference: StreamingChannel

Represents a channel that is the basis for notifying listeners of generic Streaming API events. Available with API version 29.0 and later.

### Supported Calls

REST: DELETE, GET, PATCH, POST (query requests are specified in the URI)

SOAP: `create()`, `delete()`, `describe()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

### Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Only users with the Create permission can create this record.
- You can create a permission set and grant users read and create access to all streaming channels in the org. This access isn't for a specific channel, like with user sharing.
- You can apply user sharing to StreamingChannel. You can restrict access to receiving or sending events on a channel by sharing channels with specific users or groups. Channels shared with public read-only or read-write access send events only to clients subscribed to the channel that also are using a user session associated with the set of shared users or groups. Only users with read-write access to a shared channel can generate events on the channel, or modify the actual StreamingChannel record.

### Dynamic Streaming Channel

Generic streaming also supports dynamic streaming channel creation, which creates a StreamingChannel when a client first subscribes to the channel. To enable dynamic streaming channels in your org, from Setup, enter *User Interface* in the Quick Find box, then select **User Interface**. Enable **Enable Dynamic Streaming Channel Creation**. You can also enable dynamic channel creation in Metadata API using EventSettings.

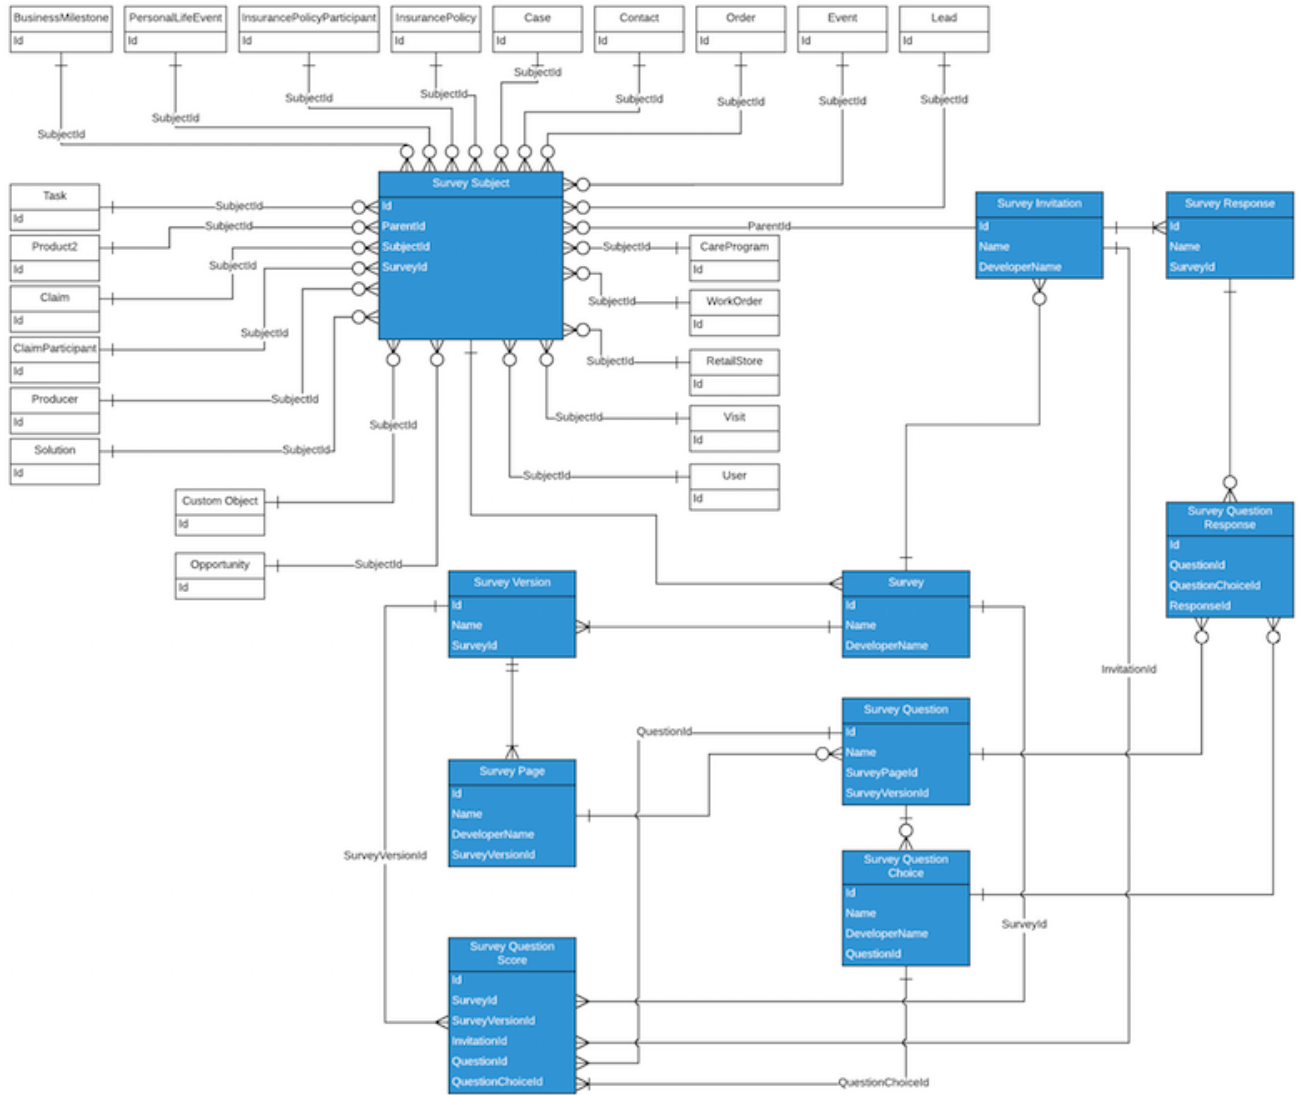

## Fields

Field	Field Type	Description
Description	string	Description of the StreamingChannel. Limit: 255 characters. <b>Field Properties:</b> Create, Filter, Group, Nillable, Sort, Update <b>Label:</b> Description
ID	ID	System field: Globally unique string that identifies a StreamingChannel record. <b>Field Properties:</b> Default on create, Filter, Group, idLookup, Sort
IsDeleted	boolean	System field: Indicates whether the record has been moved to the Recycle Bin ( <code>true</code> ) or not ( <code>false</code> ). <b>Field Properties:</b> Default on create, Filter, Group, Sort
IsDynamic	boolean	<code>true</code> if the channel gets dynamically created on subscribe if necessary, <code>false</code> otherwise. <b>Field Properties:</b> Default on create, Filter, Group, Sort
LastReferencedDate	date	The timestamp for when the current user last viewed a record related to this record. <b>Field Properties:</b> Filter, Sort
LastViewedDate	date	The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced ( <code>LastReferencedDate</code> ) and not viewed. <b>Field Properties:</b> Filter, Sort
Name	string	Required. Descriptive name of the StreamingChannel. Limit: 80 characters, alphanumeric and “_”, “/” characters only. Must start with “/u”. This value identifies the channel and must be unique. <b>Field Properties:</b> Create, Filter, Group, idLookup, Sort, Update <b>Label:</b> Streaming Channel Name
OwnerId	reference	The ID of the owner of the StreamingChannel. <b>Field Properties:</b> Create, Default on create, Filter, Group, Sort, Update <b>Label:</b> Owner Name

## Salesforce Surveys Object Model

---

Learn about how Salesforce Surveys objects relate to one another in Salesforce.

## Survey

Represents a survey.

### Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Fields

Field Name	Details
ActiveVersionID	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the survey version currently activated.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The description of the survey. This field isn't visible in the UI.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The survey's unique API name.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the current user last viewed a record related to the survey.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed the survey.</p>
LatestVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b> The ID of the most recent version of this survey.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the survey that appears in the UI.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who created the survey.</p>
SurveyType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Type of the survey.</p>
TotalVersionsCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of versions of the survey.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [SurveyFeed \(API version 42.0\)](#)

Feed tracking is available for the object.

### [SurveyOwnerSharingRule](#)

Sharing rules are available for the object.

### [SurveyShare](#)

Sharing is available for the object.

# SurveyEmailBranding

---

Represents the configuration settings for invitation emails sent to survey participants for a particular survey.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The body text of the invitation email.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique API name of the email branding configuration.</p>
FooterImageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the content asset that appears in the footer of the invitation email.</p>
FromEmailAddress	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The email address that appears in the "From" field when the invitation is sent to participants.</p>
HeaderImageId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the content asset that appears in the header of the invitation email.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language of the emails. Available languages include:</p> <ul style="list-style-type: none"> <li>• Chinese (Simplified)</li> <li>• Chinese (Traditional)</li> <li>• Danish</li> <li>• Dutch</li> <li>• English</li> <li>• Finnish</li> <li>• French</li> <li>• German</li> <li>• Italian</li> <li>• Japanese</li> <li>• Korean</li> <li>• Norwegian</li> <li>• Portuguese (Brazilian)</li> <li>• Russian</li> <li>• Spanish</li> <li>• Spanish (Mexican)</li> <li>• Swedish</li> <li>• Thai</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The label for these email configuration settings.</p>
Subject	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The subject of the invitation email.</p>

## SurveyEngagementContext

Represents the context based on which a survey invitation was sent or a survey response was received. This object is available in API version 49.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field	Details
ContextType	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Context type based on which the survey invitation was sent or the response was received.</p>
ContextValue	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Context based on which the survey invitation was sent or the response was received.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Name of the record.</p>

Field	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the record's owner.</p>
SurveyInvitationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the survey invitation.</p>
SurveyResponseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the survey response.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [SurveyEngagementContextShare](#)

Sharing is available for the object.

## SurveyInvitation

---

Represents the invitation sent to a participant to complete the survey.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
CommunityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the community that you want to send the survey to.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the contact who received the invitation. This field is available in API v49.0 and later.</p>
EmailBrandingId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the survey email branding object that's associated with this invitation.</p>
InvitationLink	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL to the survey that is sent to participants.</p>
InviteExpiryDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time that the survey invitation expires.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter</p>

Field Name	Details
	<p>, Group, Sort, Update</p> <p><b>Description</b> Determines whether this is the default survey invitation to use when the survey is sent to participants.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this survey invitation.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this survey invitation.</p>
LeadId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the lead who received the invitation. This field is available in API v49.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup Sort, Update</p> <p><b>Description</b> The name of the survey invitation that appears in the UI.</p>
OptionsAllowGuestUserResponse	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Determines whether participants who don't have a Salesforce account can complete the survey.</p>

Field Name	Details
OptionsAllowParticipantAccessTheirResponse	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Determines whether participants can access a copy of their responses after they complete the survey.</p>
OptionsCollectAnonymousResponse	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Determines whether participants can complete the survey anonymously.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who created the survey invitation.</p>
ParticipantId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the participant if the participant is a Salesforce contact, user, or lead.</p>
ResponseStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of a participant's response to the survey that's associated with the survey invitation. Possible values include:</p> <ul style="list-style-type: none"> <li>• NotStarted — For an invitation with a ParticipantID, it means that the recipient hasn't opened the survey. For an invitation without the ParticipantID, it means that none of the recipients have opened the survey.</li> <li>• Started — For an invitation with a ParticipantID, it means that the recipient opened the survey. For an invitation without the</li> </ul>

Field Name	Details
	<p><code>ParticipantID</code>, it means that the survey has been opened by at least one recipient.</p> <ul style="list-style-type: none"> <li>Paused — For an invitation with a <code>ParticipantID</code>, it means that the recipient has paused the survey. For an invitation without the <code>ParticipantID</code>, it means that the survey has been paused by any one of the recipients. Paused isn't available for invitations in which either <code>OptionsAllowParticipantAccessTheirResponse</code> or <code>OptionsCollectAnonymousResponse</code> is true.</li> <li>Completed — For an invitation with a <code>ParticipantID</code>, it means that the recipient has submitted the survey. For an invitation without the <code>ParticipantID</code>, it means that the invitation has been submitted by at least one recipient.</li> </ul>
SurveyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the survey that's sent in the invitation.</p>
UUId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A unique user ID that's added to a survey invitation generated for a contact, lead, or user.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the user who received the invitation. This field is available in API v49.0 and later.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [SurveyInvitationOwnerSharingRule](#)

Sharing rules are available for the object.

**SurveyInvitationShare**

Sharing is available for the object.

## SurveyPage

---

Represents a page, such as the title page or a question page, in a survey.

### Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique API name of this SurveyPage object.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the survey page that appears in the UI.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The version of the survey that the page belongs to.</p>

## SurveyQuestion

---

Represents a question in a survey.

## Supported Calls

`describeLayout()` `describeSObjects()` `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The API name of the SurveyQuestion. The API name must be unique within a particular version of the survey.</p>
IsDeprecated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the question was deleted from the survey.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Up to the first 250 characters of the label for the question.</p>
QuestionName	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The label for the question.</p>
QuestionType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of question. Possible values include:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• Boolean—This value is available in API v49.0 and later.</li> <li>• CSAT</li> <li>• Currency</li> <li>• Date</li> <li>• DateTime</li> <li>• Image</li> <li>• FreeText</li> <li>• MultipleChoice</li> <li>• MultiSelectPicklist</li> <li>• NPS</li> <li>• Number</li> <li>• Picklist</li> <li>• RadioButton</li> <li>• StackRank</li> <li>• Rating</li> <li>• ShortText—This value is available in API v49.0 and later.</li> <li>• Slider</li> <li>• Toggle</li> </ul>
SurveyPageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Lookup to the SurveyPage that contains the question.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the SurveyVersion that the question belongs to.</p>

## SurveyQuestionChoice

---

Represents an answer choice that a participant can select for a survey question.

## Supported Calls

`describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique API name of the SurveyQuestionChoice object.</p>
IsDeprecated	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter , Group, Sort</p> <p><b>Description</b> Indicates whether a question choice was deleted from the survey.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> A label for the question choice that appears in the UI.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the SurveyQuestion object that this choice belongs to.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The version of the survey that this question choice belongs to.</p>

# SurveyQuestionResponse

---

Represents a participant's answer to a specific question.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
ChoiceValue	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Response provided by a participant for the following question types:</p> <ul style="list-style-type: none"> <li>• Multiple choice</li> <li>• Picklist</li> <li>• Radio</li> <li>• Ranking</li> </ul>
Datatype	<p><b>Type</b></p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The data type of the question response. Possible values are:</p> <ul style="list-style-type: none"> <li>• Boolean This value is available in API v49.0 and later.</li> <li>• Date</li> <li>• Double</li> <li>• Int</li> <li>• Number</li> <li>• String</li> </ul>
DateTimeValue	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Response provided by a participant for a question of the type date time.</p>

Field	Details
DateValue	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Response provided by a participant for a question of the type date.</p>
InvitationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the SurveyInvitation that was sent to the survey participant.</p>
IsTrueOrFalse	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Response provided by a participant for a question type which has only two possible values: True and False.</p>
NumberValue	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Response provided by a participant for the following question types:</p> <ul style="list-style-type: none"><li>• Net Promoter Score (NPS)</li><li>• Rating</li><li>• Score</li><li>• Slider</li></ul>
QuestionChoiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of SurveyQuestionChoice that a participant chose in response to a question.</p>

Field	Details
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the SurveyQuestion that a participant provided an answer for.</p>
Rank	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Rank provided by a participant for an answer choice for the ranking question type.</p>
ResponseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the SurveyResponse that is the parent of this SurveyQuestionResponse.</p>
ResponseShortText	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Up to the first 250 characters of the response provided by a participant for a text type question.</p>
ResponseValue	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Response provided by a participant for a question.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the SurveyVersion that the response belongs to.</p>

# SurveyQuestionScore

---

Represents the aggregate of responses for the following question types: date, multiple choice, picklist, radio, ranking, rating, scoring, slider, and [Net Promoter Score® \(NPS®\)](#).

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
CumulativeScore	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of the responses provided by all the participants for a question of the following types: rating, scoring, and slider. For a question of the type ranking, sum of the weights provided by all the participants for each item.</p> <p> <b>Note:</b> This field is only applicable for the overall score type.</p>
DateResponse	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The date selected by one or more participants for a question of the type date.</p> <p> <b>Note:</b> This field is only applicable for the individual score type.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> For an overall score type record:</p> <ul style="list-style-type: none"> <li>Name of a question.</li> <li>Name of an item in a question of the type ranking.</li> </ul> <p>For an individual score type record:</p> <ul style="list-style-type: none"> <li>Name of an item in a question of the type ranking.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>Name of a question of the type date.</li> <li>Response provided by one or more participants for questions of the following types: picklist, multiple choice, rating, ranking, score, slider, NPS.</li> </ul>
QuestionChoiceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier of the answer choice selected by one or more participants. For an individual score type record, this field is applicable for questions of the following types: picklist, radio, multi choice, ranking and rating. For an overall score type record, this field is applicable for questions of the type ranking.</p>
QuestionDeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The API name of the question for which response is recorded. The API name must be unique within a particular version of the survey.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier of the question for which response is recorded.</p>
QuestionName	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Name of the question for which response is recorded.</p>
QuestionSkippedCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Number of participants who didn't respond to the question.</p>

Field	Details
	<p> <b>Note:</b> This field is only applicable for the overall score type.</p>
ResponseCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> For an overall score type record, number of participants who responded to the question. For an individual score type record, number of participants who selected a particular answer choice.</p>
ResponseValue	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Answer choice selected by one or more participants for a question of the following types: rating, slider, score, NPS. Rank provided by the participant for an item in a question of the type ranking.</p> <p> <b>Note:</b> This field is only applicable for the individual score type.</p>
Score	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> For an individual score type record, percentage of participants who selected a particular answer choice.</p> <p> <b>Note:</b> For questions of the type ranking, the percentage of participants who have provided the same rank to an item.</p> <p>For overall score type record:</p> <ul style="list-style-type: none"> <li>• Average score of questions of the following question types: rating, scoring, and slider.</li> <li>• Score of an NPS type question.</li> <li>• Average weight provided by all participants for each item in question of the type ranking.</li> <li>• Number of participants who responded to the question for the following question types: date, radio, multi choice, and picklist.</li> </ul>
ScoreType	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Type of the score calculated for a record. Possible values are:</p> <ul style="list-style-type: none"> <li>• Individual</li> <li>• Overall</li> </ul>
SurveyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Unique identifier of the survey that contains the question for which scores are calculated.</p>
SurveyInvitationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier of the survey invitation for which scores are calculated.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Unique identifier of the survey version for which scores are calculated.</p>

## SurveyResponse

---

Represents information about a participant's response to a survey, such as the status of the response, the participant's location, and when the survey was completed.

### Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

## Fields

Field Name	Details
CompletionDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the participant completed the survey.</p>
DataMapperExecutionStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Status of all the survey data maps after a response is received. This field is available in API v49.0 and later where Survey Advanced Features permission is enabled.</p> <p>Possible values are:</p> <ul style="list-style-type: none"><li>• Pending</li><li>• InProgress</li><li>• Success</li><li>• Error</li></ul>
InterviewGuid	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Nillable</p> <p><b>Description</b> An automatically-generated, unique ID for a saved survey response.</p>
InterviewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the FlowInterview object that's associated with this response.</p>
InvitationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field Name	Details
IpAddress	<p><b>Description</b> The ID of the SurveyInvitation object that's associated with this response.</p> <hr/> <p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The IP address of the device the participant used to take the survey.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The language that the participant used to complete the survey. Possible values are:</p> <ul style="list-style-type: none"> <li>• af—Afrikaans</li> <li>• ar—Arabic</li> <li>• ar_AE—Arabic (United Arab Emirates)</li> <li>• ar_BH—Arabic (Bahrain)</li> <li>• ar_DZ—Arabic (Algeria)</li> <li>• ar_EG—Arabic (Egypt)</li> <li>• ar_IQ—Arabic (Iraq)</li> <li>• ar_JO—Arabic (Jordan)</li> <li>• ar_KW—Arabic (Kuwait)</li> <li>• ar_LB—Arabic (Lebanon)</li> <li>• ar_LY—Arabic (Libya)</li> <li>• ar_MA—Arabic (Morocco)</li> <li>• ar_OM—Arabic (Oman)</li> <li>• ar_QA—Arabic (Qatar)</li> <li>• ar_SA—Arabic (Saudi Arabia)</li> <li>• ar_SD—Arabic (Sudan)</li> <li>• ar_SY—Arabic (Syria)</li> <li>• ar_TN—Arabic (Tunisia)</li> <li>• ar_YE—Arabic (Yemen)</li> <li>• bg—Bulgarian</li> <li>• bn—Bengali</li> <li>• bs—Bosnian</li> </ul>

LastReferencedDate

**Type**

dateTime

**Properties**

Filter, Nillable, Sort

Field Name	Details
	<p><b>Description</b> The date and time that another Salesforce object last referenced this SurveyResponse object.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that someone last viewed this SurveyResponse object.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The latitude of the participant's location.</p>
Location	<p><b>Type</b> location</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The latitude and longitude coordinates of the participant's location.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The longitude of the participant's location.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the participant.</p>
Status	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the survey. Possible values include:</p> <ul style="list-style-type: none"> <li>• NotStarted — The participant hasn't opened the survey.</li> <li>• Started — The participant has opened the survey.</li> <li>• Paused — The participant has paused the survey. Paused isn't available for invitations in which either <code>OptionsAllowParticipantAccessTheirResponse</code> or <code>OptionsCollectAnonymousResponse</code> is true.</li> <li>• Completed — The participant has completed the survey.</li> </ul>
SubmitterId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Salesforce user or contact who completed the survey.</p>
SurveyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the survey that the participant completed.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the version of the survey that the participant completed.</p>

## SurveySubject

---

Represents a relationship between a survey and another object, such as an account or a case.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
LastReferencedDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the SurveySubject record was last referenced by another object.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed the SurveySubject record.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the SurveySubject record.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Unique identifier of the SurveyInvitation object or SurveyResponse object that is associated with this survey-object relationship.</p>
SubjectEntityType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

**Field Name****Details****Description**

Object that the survey is associated with. Possible values include:

- *Account*
- *BusinessMilestone*
- *CareProgram*
- *Case*
- *Claim*
- *ClaimParticipant*
- *Contact*
- *Event*
- *InsurancePolicy*
- *InsurancePolicyParticipant*
- *Lead*
- *LiveChatTranscript* This value is available in API v49.0 and later.
- *Opportunity*
- *Order*
- *PersonalLifeEvent*
- *Producer*
- *Product2*
- *RetailStore*
- *ServiceAppointment*
- *Solution*
- *Task*
- *User*
- *Visit*
- *WorkOrder*
- Custom Objects

SubjectId

**Type**

reference

**Properties**

Create, Filter, Group, Sort, Update

**Description**

The ID of the object that's associated with the survey.

SurveyId

**Type**

reference

**Properties**

Filter, Group, Sort

Field Name	Details
	<p><b>Description</b> Unique identifier of the survey that is associated with the record that's represented by <code>SubjectId</code>.</p>
<code>SurveyInvitationId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier of the survey invitation that's associated with another object.</p>
<code>SurveyResponseId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier of the survey response that's associated with another object.</p>

## SurveyVersion

---

Represents a version of a survey.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

## Fields

Field Name	Details
<code>Description</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The description of this survey version.</p>
<code>LastReferencedDate</code>	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the current user last viewed a record related to this survey.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this survey.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the survey that appears in the UI.</p>
SurveyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the Survey object associated with this survey version.</p>
SurveyStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status of the survey. Possible values include:</p> <ul style="list-style-type: none"><li>• Active</li><li>• Draft</li><li>• Obsolete</li><li>• InvalidDraft</li></ul>
VersionNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p>

**Field Name****Details****Description**

The version number of the survey.

## SurveyVersionAddlInfo

---

Represents additional information about the a survey version. This information defines the default settings of a survey version. This object is available in API version 49.0 and later.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

**Field****Details**

EmailTemplateId

**Type**

reference

**Properties**

Filter, Group, Nillable, Sort

**Description**

ID of the email template that's used to send automated survey invitation.

InvitationSharingRole

**Type**

picklist

**Properties**

Filter, Group, Nillable, Restricted picklist, Sort

**Description**

Indicates the users with whom edit access to a survey invitation must be shared.

Possible values are:

- `InvitationRecordCreator`— Owner of the record that's associated with survey invitation
- `SurveyOwner`

Language

**Type**

picklist

**Properties**

Filter, Group, Nillable, Restricted picklist, Sort

**Description**

Language in which the survey was created.

Field	Details
	<ul style="list-style-type: none"><li>• <code>hi</code>—Hindi</li><li>• <code>hr</code>—Croatian</li><li>• <code>hu</code>—Hungarian</li><li>• <code>hy</code>—Armenian</li><li>• <code>in</code>—Indonesian</li><li>• <code>is</code>—Icelandic</li><li>• <code>it</code>—Italian</li><li>• <code>it_CH</code>—Italian (Switzerland)</li><li>• <code>iw</code>—Hebrew</li><li>• <code>ja</code>—Japanese</li><li>• <code>ka</code>—Georgian</li><li>• <code>kn</code>—Kannada</li><li>• <code>ko</code>—Korean</li><li>• <code>lb</code>—Luxembourgish</li><li>• <code>lt</code>—Lithuanian</li><li>• <code>lv</code>—Latvian</li><li>• <code>mi</code>—Te reo</li><li>• <code>mk</code>—Macedonian</li><li>• <code>ml</code>—Malayalam</li><li>• <code>mr</code>—Marathi</li><li>• <code>ms</code>—Malay</li><li>• <code>mt</code>—Maltese</li><li>• <code>my</code>—Burmese</li><li>• <code>nl_BE</code>—Dutch (Belgium)</li><li>• <code>nl_NL</code>—Dutch</li><li>• <code>no</code>—Norwegian</li><li>• <code>pl</code>—Polish</li><li>• <code>pt_BR</code>—Portuguese (Brazil)</li><li>• <code>pt_PT</code>—Portuguese (European)</li><li>• <code>rm</code>—Romansh</li><li>• <code>ro</code>—Romanian</li><li>• <code>ro_MD</code>—Romanian (Moldova)</li><li>• <code>ru</code>—Russian</li><li>• <code>sh</code>—Serbian (Latin)</li><li>• <code>sh_ME</code>—Montenegrin</li><li>• <code>sk</code>—Slovak</li><li>• <code>sl</code>—Slovene</li><li>• <code>sq</code>—Albanian</li></ul>

Field	Details
	<ul style="list-style-type: none"> <li>• sr—Serbian (Cyrillic)</li> <li>• sv—Swedish</li> <li>• sw—Swahili</li> <li>• ta—Tamil</li> <li>• te—Telugu</li> <li>• th—Thai</li> <li>• tl—Tagalog</li> <li>• tr—Turkish</li> <li>• uk—Ukrainian</li> <li>• ur—Urdu</li> <li>• vi—Vietnamese</li> <li>• xh—Xhosa</li> <li>• zh_CN—Chinese (Simplified)</li> <li>• zh_HK—Chinese (Hong Kong)</li> <li>• zh_SG—Chinese (Singapore)</li> <li>• zh_TW—Chinese (Traditional)</li> <li>• zu—Zulu</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Name of the record.</p>
SurveyQuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the survey question that embedded in the email template used to send automated survey invitations.</p>
SurveyVersionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the survey version. This field is unique within your organization</p>

# TabDefinition

---

Represents a custom tab. Returns only the tabs that the current user has access to. This object is available in API version 43.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `search()`

## Fields

Field Name	Details
<code>DurableId</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Unique identifier for the tab. Always retrieve this value before using it, because the value isn't guaranteed to stay the same from one release to the next. Simplify queries by using this field instead of making multiple queries.</p>
<code>IsAvailableInAloha</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the tab is available in Salesforce Classic.</p>
<code>IsAvailableInLightning</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the tab is available in Lightning Experience.</p>
<code>IsCustom</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the tab is a custom tab created by admins in the org.</p>

Field Name	Details
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The localized label corresponding to the <code>MasterLabel</code> field in the Tooling API object.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The developer name of the tab.</p>
SubjectName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name of the sObject corresponding to the tab.</p>
Url	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL that can be used to launch this tab.</p>

## TagDefinition

---

Defines the attributes of child Tag objects.

### Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

## Fields

Field	Detail
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Update</p> <p><b>Description</b> Identifies the tag word or phrase.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Nillable, Restricted picklist</p> <p><b>Description</b> Defines the visibility of a tag. Possible value are:</p> <ul style="list-style-type: none"> <li>• <b>Public:</b> The tag can be viewed and manipulated between all users in an organization.</li> <li>• <b>Personal:</b> The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

When you create a tag for a record, an association is created with to a corresponding TagDefinition:

- If the value in the tag's `Name` field is new, a new TagDefinition record is automatically created and becomes the parent of the tag.
- If the value in the tag's `Name` field already exists in a TagDefinition, that TagDefinition automatically becomes the parent of the tag.

Each TagDefinition record has a one-to-many relationship with its child tag records.

The following standard objects represent tags for records:

- AccountTag
- AssetTag
- CampaignTag
- CaseTag
- ContactTag
- ContractTag
- DocumentTag
- EventTag
- LeadTag
- NoteTag
- OpportunityTag
- SolutionTag
- TaskTag

Custom objects may also be tagged. Tags for custom objects are identified by a suffix of two underscores immediately followed by the word `tag`. For example, a custom object named `Meeting` has a corresponding tag named `Meeting__tag` in that organization's WSDL. `Meeting__tag` is only valid for `Meeting` objects.

`TagDefinition` is useful for mass operations on any tag record. For instance, if you want to rename existing tags, you can search for the appropriate `TagDefinition` object, update it, and the child tag's `Name` values are also changed. The following Java example replaces all `WC` tags with the phrase `West Coast`:

```
public void tagDefinitionSample() {
    String soqlQuery = "SELECT Id, Name FROM TagDefinition " +
        "WHERE Name = 'WC'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TagDefinition tagDef = (TagDefinition) qResult.getRecords()[0];
        tagDef.setName("West Coast");
        connection.update(new SObject[]{tagDef});
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

When a tag is deleted, its parent `TagDefinition` will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a `TagDefinition` sends it to the Recycle Bin, along with any associated tag entries.

## Task

Represents a business activity such as making a phone call or other to-do items. In the user interface, `Task` and `Event` records are collectively referred to as activities.

**Note:** Task fields related to calls are exclusive to Salesforce CRM Call Center. Also, `query()`, `delete()`, and `update()` aren't allowed with tasks related to more than one contact in API versions 23.0 and earlier.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Field Type
<code>AccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Sort, Filter, Nillable</p> <p><b>Description</b> Represents the ID of the related Account. The <code>AccountId</code> is determined as follows.</p>

Field	Field Type
	<p>If the value of <code>whatId</code> is any of the following objects, then Salesforce uses that object's <code>AccountId</code>.</p> <ul style="list-style-type: none"> <li>Account</li> <li>Opportunity</li> <li>Contract</li> <li>Custom object that is a child of Account</li> </ul> <p>If the value of the <code>whatId</code> field is any other object, and the value of the <code>whoId</code> field is a Contact object, then Salesforce uses that contact's <code>AccountId</code>. (If your organization uses Shared Activities, then Salesforce uses the <code>AccountId</code> of the primary contact.)</p> <p>Otherwise, Salesforce sets the value of the <code>AccountId</code> field to <code>null</code>.</p> <p>For information on IDs, see <a href="#">ID Field Type</a>.</p>
<code>ActivityDate</code>	<p><b>Type</b> date</p> <p><b>Properties</b> Group, Sort, Create, Filter, Nillable, Update</p> <p><b>Description</b> Represents the due date of the task. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences. Label is <b>Due Date</b>.</p> <p> <b>Note:</b> This field can't be set or updated for a recurring task (<code>IsRecurrence</code> is <code>true</code>).</p>
<code>CallDisposition</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.</p> <p>Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.</p>
<code>CallDurationInSeconds</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Duration of the call in seconds.</p>

Field	Field Type
	Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.
CallObject	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Name of a call center. Limit is 255 characters. Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.</p>
CallType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of call being answered: Inbound, Internal, or Outbound.</p>
ConnectionReceivedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field	Field Type
	<p><b>Description</b> Contains a text description of the task.</p>
IsArchived	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the event has been archived.</p>
IsClosed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the task has been completed (<code>true</code>) or not (<code>false</code>). Is only set indirectly via the <code>Status</code> picklist. Label is <b>Closed</b>.</p>
IsHighPriority	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates a high-priority task. This field is derived from the <code>Priority</code> field.</p>
IsRecurrence	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the task is scheduled to repeat itself (<code>true</code>) or only occurs once (<code>false</code>). This field is read-only on update, but not on create. If this field value is <code>true</code>, then <code>RecurrenceStartDateOnly</code>, <code>RecurrenceEndDateOnly</code>, <code>RecurrenceType</code>, and any recurrence fields associated with the given recurrence type must be populated. See <a href="#">Recurring Tasks</a>.</p>
IsReminderSet	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether a popup reminder has been set for the task (<code>true</code>) or not (<code>false</code>).</p>

Field	Field Type
IsVisibleInSelfService	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Update</p> <p><b>Description</b> Indicates whether a task associated with an object can be viewed in the Customer Portal (<code>true</code>) or not (<code>false</code>).</p> <p>If your organization has enabled Communities, tasks marked <code>IsVisibleInSelfService</code> are visible to any external user in the community, as long as the user has access to the record the task was created on.</p> <p>This field is available when Customer Portal or partner portal are enabled OR Communities is enabled and you have Customer Portal or partner portal licenses.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the User or Group who owns the record. Label is <b>Assigned To ID</b>. This field accepts Groups of type Queue only.</p> <p>In the user interface, Group IDs correspond with the queue's list view names. To create or update tasks assigned to Group, use v48.0 or later.</p>
Priority	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Group, Sort, Create, Filter, Update</p> <p><b>Description</b> Required. Indicates the importance or urgency of a task, such as high or low.</p>
RecurrenceActivityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Read-only. Not required on create. ID of the main record of the recurring task. Subsequent occurrences have the same value in this field.</p>
RecurrenceDayOfMonth	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p><b>Description</b> The day of the month in which the task repeats.</p>
RecurrenceDayOfWeekMask	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The day or days of the week on which the task repeats. This field contains a bitmask. The values are as follows:</p> <ul style="list-style-type: none"> <li>• Sunday = 1</li> <li>• Monday = 2</li> <li>• Tuesday = 4</li> <li>• Wednesday = 8</li> <li>• Thursday = 16</li> <li>• Friday = 32</li> <li>• Saturday = 64</li> </ul> <p>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.</p>
RecurrenceEndDateOnly	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last date on which the task repeats. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences.</p>
RecurrenceInstance	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The frequency of the recurring task. For example, "2nd" or "3rd."</p>
RecurrenceInterval	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p><b>Description</b> The interval between recurring tasks.</p>
RecurrenceMonthOfYear	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The month of the year in which the task repeats.</p>
RecurrenceRegeneratedType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Represents what triggers a repeating task to repeat. Add this field to a page layout together with the <code>RecurrenceInterval</code> field, which determines the number of days between the triggering date (due date or close date) and the due date of the next repeating task in the series.</p> <p>Label is <b>Repeat This Task</b>. This field has the following picklist values:</p> <ul style="list-style-type: none"> <li>• <b>None</b>: The task doesn't repeat.</li> <li>• <b>After due date</b>: The next repeating task will be due the specified number of days after the current task's due date.</li> <li>• <b>After the task is closed</b>: The next repeating task will be due the specified number of days after the current task is closed.</li> <li>• <b>(Task closed)</b>: This task, now closed, was opened as part of a repeating series.</li> </ul> <p> <b>Note</b>: When tasks in a series are set to repeat after their due date, Salesforce doesn't create recurrences that would have been due in the past. Instead, Salesforce keeps adding the interval until a repeated task has a due date in the future.</p> <p>For example, suppose that someone sets a task to repeat three days after it's due. But, that person doesn't complete the task (mark it Closed) until five days after it's due. Instead of creating a task that's already overdue, Salesforce gives the new task a due date of tomorrow. This due date is equivalent to 6 days after the due date; two intervals of three days each.</p> <p>If that person completes the repeating task (marks it Closed) before the due date, the next task is still due three days after the due date.</p>
RecurrenceStartDateOnly	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p><b>Description</b> The date when the recurring task begins. Must be a date and time before <code>RecurrenceEndDateOnly</code>.</p>
<code>RecurrenceTimeZoneSidKey</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The time zone associated with the recurring task. For example, "UTC-8:00" for Pacific Standard Time.</p>
<code>RecurrenceType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates how often the task repeats. For example, daily, weekly, or every nth month (where "nth" is defined in <code>RecurrenceInstance</code>).</p>
<code>ReminderDateTime</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Represents the time when the reminder is scheduled to fire, if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.</p>
<code>Status</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The status of the task, such as In Progress or Completed. Each predefined <code>Status</code> field implies a value for the <code>IsClosed</code> flag. To obtain picklist values, query the <code>TaskStatus</code> object.</p> <p> <b>Note:</b> This field can't be updated for recurring tasks (<code>IsRecurrence</code> is <code>true</code>).</p>
<code>Subject</code>	<p><b>Type</b> combobox</p>

Field	Field Type
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The subject line of the task, such as “Call” or “Send Quote.” Limit: 255 characters.</p>
TaskSubtype	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Provides standard subtypes to facilitate creating and searching for specific task subtypes. This field isn’t updateable. TaskSubtype values:</p> <ul style="list-style-type: none"> <li>• Task</li> <li>• Email</li> <li>• List Email</li> <li>• Cadence</li> <li>• Call</li> </ul> <p> <b>Note:</b> The Cadence subtype is an internal value used by High Velocity Sales, and can’t be set manually.</p>
TaskWhoIds	<p><b>Type</b> JunctionIdList</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> A string array of contact or lead IDs related to this task. This JunctionIdList field is linked to the TaskWhoRelations child relationship. TaskWhoIds is only available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary whoId if you don’t specify a primary whoId. If you set the EventWhoIds field to null, all entries in the list are deleted and the value of whoId is added as the first entry.</p> <p> <b>Warning:</b> Adding a JunctionIdList field name to the fieldsToNull property deletes all related junction records. This action can’t be undone.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> The type of task, such as Call or Meeting.</p>

Field	Field Type
WhatCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Available to organizations that have Shared Activities enabled. Count of related TaskRelations pertaining to WhatId. Count of the WhatId must be 1 or less.</p>
WhatId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The WhatId represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. WhatIds are polymorphic. Polymorphic means a WhatId is equivalent to the ID of a related object. The label is Related To ID.</p>
WhoCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Available to organizations that have Shared Activities enabled. Count of related TaskRelations pertaining to WhoId.</p>
WhoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is Name ID. Beginning in API version 37.0, if the contact or lead ID in the whoId field is not in the TaskWhoIds list, no error occurs and the ID is added to the TaskWhoIds as the primary whoId. If whoId is set to null, an arbitrary ID from the existing TaskWhoIds list is promoted to the primary position.</p>

## Usage

### Recurring Tasks

- Recurring tasks are available in API version 16.0 and later.
- After a task is created, it can't be changed from recurring to nonrecurring or vice versa.
- When a user creates a series of recurring tasks, Salesforce creates a main record and subsequent occurrences. For the main record, `IsRecurrence` is set to `true` and other fields that define the recurrence pattern are populated. The ID of the main record of the recurring task is saved in the subsequent occurrences, in the `RecurrenceActivityId` field.
- When you delete a recurring task series through the API, all open and closed task occurrences in the series are removed. However, when you delete a recurring task series through the user interface, only open tasks occurrences (`IsClosed` is `false`) in the series are removed.
- If `IsRecurrence` is `true`, then `RecurrenceStartDateOnly`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the following table) must be populated.
- When you change the `RecurrenceStartDateOnly` field or the recurrence pattern, all open tasks occurrences in the series are deleted and new open task occurrences are created based on the new recurrence pattern. The following fields determine the recurrence pattern: `RecurrenceType`, `RecurrenceTimeZoneSidKey`, `RecurrenceInterval`, `RecurrenceDayOfWeekMask`, `RecurrenceDayOfMonth`, `RecurrenceInstance`, and `RecurrenceMonthOfYear`.
- When you change the value of `RecurrenceEndDateOnly` to an earlier date (for example, from January 20th to January 10th), all open task occurrences in the series with the `ActivityDate` value greater than the new end date value are deleted. Other open and closed task occurrences in the series are not affected.
- When you change the value of `RecurrenceEndDateOnly` to a later date (for example, from January 10th to January 20th), new task occurrences are created up to the new end date. Existing open and closed tasks in the series are not affected.

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
RecursDaily	RecurrenceInterval	Every second day
RecursEveryWeekday	RecurrenceDayOfWeekMask	Every weekday - can't be Saturday or Sunday
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the twenty-sixth day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstance RecurrenceMonthOfYear	The first Saturday in every October

### JunctionIdList

The `JunctionIdList` field is now implemented in the `Event` and `Task` objects. With a single API call, it's easy to create many-to-many relationships between the `Event` or `Task` object with contacts, leads, or users.

To create a `Task` with related `Contacts` without `JunctionIdList`, you first have to create the task, then use the returned task ID to create the `TaskRelation` records. If the `TaskRelation` save call fails, error handling is your responsibility because the task has already been committed to the database.

```
public void createTasksOld(Contact[] contacts) {
    Task task = new Task();
    task.setSubject("New Task");
    SaveResult[] results = null;
    try {
        results = connection.create(new Task[] {
            task
        });
        if (results[0].isSuccess()) {
            TaskRelation[] relations = new TaskRelation[contacts.size()];
            for (int i = 0; i < contacts.length; i++) {
                relations[i] = new TaskRelation();
                relations[i].setTaskId(results[0].getID());
                relations[i].setRelationId(contacts[i].getID());
            }
            results = connection.create(relations);
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

To create a task using `JunctionIdList`, IDs are pulled from the related contacts and both the task and the `TaskRelation` records are created in one API call. If the `TaskRelation` fails, the task is rolled back because it's all done in a single API call.

```
public void createTaskNew(Contact[] contacts) {
    String[] contactIds = new String[contacts.size()];
    for (int i = 0; i < contacts.size(); i++) {
        contactIds[i] = contacts[i].getID();
    }
    Task task = new Task();
    task.setSubject("New Task");
    task.setTaskWhoIds(contactIds);
    SaveResult[] results = null;
    try {
        results = connection.create(new Task[] {
            task
        });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**TaskFeed (API version 20.0)**

Feed tracking is available for the object.

SEE ALSO:

[Object Basics](#)

## TaskPriority

---

Represents the importance or urgency of a Task, such as High, Normal, or Low.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

Customer and Partner Portal users can't access this object.

### Fields

Field	Details
<code>ApiName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
<code>IsDefault</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this is the default task priority value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value in the picklist can be the default value.</p>
<code>IsHighPriority</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether this task priority value represents a high priority Task (<code>true</code>) or not (<code>false</code>). Multiple task priority values can represent a high-priority Task.</p>
MasterLabel	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Master label for this task priority value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Nillable, Group, Sort</p> <p><b>Description</b></p> <p>Number used to sort this value in the task priority picklist. These numbers are not guaranteed to be sequential, as some previous task priority values might have been deleted.</p>

## Usage

This object represents a value in the task priority picklist. The task priority picklist provides additional information about the importance of a Task, such as whether a given priority value represents a high priority. Your client application can query on this object to retrieve the set of values in the task priority picklist, and then use that information while processing Task objects to determine more information about a given task. For example, the application could test whether a given Task is high priority based on its `Priority` value and the value of the `IsHighPriority` in the associated TaskPriority object.

[Object Basics](#)

## TaskRelation

Represents the relationship between a task and a lead, contacts, and other objects related to the task. If Shared Activities is enabled, this object doesn't support triggers, workflow, or data validation rules. This object is available in API version 24.0 and later.

TaskRelation is only available if you've enabled Shared Activities in your organization.

TaskRelation allows the following relationships:

- A task can be related to one lead or up to 50 contacts.
- A task can also be related to one account, asset, campaign, case, contract, opportunity, product, solution, or custom object.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `queryAll()`, `retrieve()`

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the Account ID of the relation. For information on IDs, see <a href="#">ID Field Type</a>.</p>
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a task has been deleted; label is <b>Deleted</b>. When a TaskRelation record is deleted, it isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when the parent object was deleted. Don't use the <code>IsDeleted</code> field to detect deleted records in SOQL queries or <code>queryAll()</code> calls on directly deleted relation records. Instead, use the call <code>getDeleted()</code>.</p>
IsWhat	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the relation is an Account, Opportunity, Campaign, Case, other standard object, or a custom object. Value is <code>false</code> if <code>RelationId</code> is a contact or lead and <code>true</code> otherwise.</p>
RelationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates the <code>whatId</code> or <code>whoId</code> in the relationship. For more information, see <a href="#">Task</a>.</p> <p>For information on IDs, see <a href="#">ID Field Type</a>.</p>
TaskId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Represents the ID of the associated Task.</p> <p>For information on IDs, see <a href="#">ID Field Type</a>.</p>

## Usage

### See contacts associated with a task

```
public void queryWhosOfTaskSample() {
    String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
from TaskRelations WHERE isWhat = false) FROM Task WHERE Id = '00T x0000005OKEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskRelation relation1 =
(TaskRelation)qResult.getRecords()[0].getTaskRelations().getRecords()[0];
    }catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

### SEE ALSO:

[Task](#)

[TaskWhoRelation](#)

## TaskStatus

Represents the status of a Task, such as Not Started, Completed, or Closed.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Customer Portal users can't access this object.

## Fields

Field	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
IsClosed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this task status value represents a closed Task (<code>true</code>) or not (<code>false</code>). Multiple task status values can represent a closed Task.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether this is the default task status value (<code>true</code>) or not (<code>false</code>) in the picklist.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Master label for this task status value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Number used to sort this value in the task status picklist. These numbers are not guaranteed to be sequential, as some previous task status values might have been deleted.</p>

## Usage

This object represents a value in the task status picklist. The task status picklist provides additional information about the status of a Task, such as whether a given status value represents an open or closed task. Your client application can query this object to retrieve the set of values in the task status picklist, and then use that information while processing Task records to determine more information about a given task. For example, the application could test whether a given task is open or closed based on the Task `STATUS` value and the value of the `IsClosed` property in the associated TaskStatus record.

SEE ALSO:

[Object Basics](#)

## TaskTag

Associates a word or short phrase with a Task.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
ItemId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter</p> <p><b>Description</b></p> <p>ID of the tagged item.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter</p>

Field Name	Details
	<p><b>Description</b></p> <p>Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>ID of the parent TagDefinition object that owns the tag.</p>
Type	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Restricted picklist</p> <p><b>Description</b></p> <p>Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> <li>• <code>Public</code>—The tag can be viewed and manipulated by all users in an organization.</li> <li>• <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.</li> </ul>

## Usage

TaskTag stores the relationship between its parent TagDefinition and the Task being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

## TaskWhoRelation

Represents the relationship between a task and a lead or contacts. This object is available in API version 29.0 and later.

This derived object is a filtered version of the [TaskRelation](#) on page 2511 object; that is, `IsParent` is `true` and `IsWhat` is `false`. It doesn't represent relationships to accounts, opportunities, or other objects.

TaskWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
RelationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the contacts or lead related to the task.</p>
TaskId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the task.</p>
Type	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates whether the person related to the task is a lead or contact.</p>

## Usage

### Apex example that queries contacts associated with a task

```
public void queryWhosOfTaskSample() {
    String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
from TaskWhoRelations) FROM Task WHERE Id = '00Tx0000005OKEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskWhoRelation relation1 =
(TaskWhoRelation)qResult.getRecords()[0].getTaskWhoRelations().getRecords()[0];
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

### SEE ALSO:

[TaskRelation](#)

# TenantSecret

---

This object stores an encrypted organization-specific key fragment that is used with the master secret to produce organization-specific data encryption keys. This object is available in API version 34.0 and later.

You can rotate tenant secrets of the `Data` type once every four hours in a sandbox org or every 24 hours in production orgs. You can rotate tenant secrets of the `SearchIndex` type once every seven days.

 **Note:** This information is about Shield Platform Encryption and not Classic Encryption.

## Supported Calls

`create()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the tenant secret.</p>
KeyDerivationMode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The key derivation mode applied to customer-supplied key material. Modes are:</p> <p><b>PBKDF2</b> The customer-supplied key material is used by the Shield KMS to create a derived data encryption key.</p> <p><b>NONE</b> The customer-supplied key material is used by the Shield KMS as the final data encryption key to directly encrypt and decrypt data.</p> <p>Available in API version 43.0 and later.</p>
RemoteKeyCertificate	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The name of the certificate whose public key is used to encrypt the <code>SecretValue</code> during a remote key callout.</p> <p>Available in API version 45.0 and later.</p>
<code>RemoteKeyIdentifier</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>A unique key identifier for key material fetched from a remote key service.</p> <p>Available in API version 45.0 and later.</p>
<code>RemoteKeyServiceID</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The named credential used to fetch remote key material from a remote key service.</p> <p>Available in API version 45.0 and later.</p>
<code>SecretValue</code>	<p><b>Type</b></p> <p>base64</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>The encrypted 256-bit secret value encoded in base64.</p>
<code>SecretValueCertificate</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The certificate needed to upload a customer-supplied tenant secret. Each certificate has a unique name.</p>
<code>SecretValueHash</code>	<p><b>Type</b></p> <p>base64</p> <p><b>Properties</b></p> <p>Create</p>

## Field Name

## Details

**Description**

The matching tenant secret hash for an uploaded customer-supplied tenant secret.

Source

**Type**

picklist

**Properties**

Create, Defaulted on create, Filter, Group, Restricted picklist, Sort

**Description**

The source of the encryption key material. Values are:

**HSM**

A Salesforce-generated tenant secret.

**Uploaded**

A customer-supplied tenant secret or data encryption key.

**Remote**

A tenant secret or data encryption key fetched from a key service outside of Salesforce. Available in API version 44.0 and later.

**Note:** Tenant secrets with a `Source` value of Remote are listed as Fetched on the Key Management page in Setup.

Available in API version 43.0 and later.

Status

**Type**

picklist

**Properties**

Filter, Group, Nillable, Restricted picklist, Sort, Update

**Description**

The status of the tenant secret. Values are:

**Active**

Can be used to encrypt and decrypt new or existing data.

**Archived**

Can't encrypt new data. Can be used to decrypt data previously encrypted with this key when it was active.

**Destroyed**

Can't encrypt or decrypt data. Data encrypted with this key when it was active can no longer be decrypted. Files and attachments encrypted with this key can no longer be downloaded.

You can update the `Status` field through the API in versions 44.0 or later.

Type

**Type**

picklist

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of tenant secret. The <code>Type</code> field is available in API version 39.0 and later. The following values appear in the <code>Type</code> picklist:</p> <ul style="list-style-type: none"> <li><code>Data</code>—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments but not search index files. Tenant secrets created in API version 34.0 and later default to the <code>Data</code> type.</li> <li><code>SearchIndex</code>—search index files (available in API version 39.0 and later).</li> <li><code>Analytics</code>—Einstein Analytics data (available in API version 39.0 and later).</li> <li><code>DeterministicData</code>—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments, but not search index files (available in API version 39.0 and later).</li> <li><code>EventBus</code>—Change Data Capture event data (available in API version 43.0 and later). Change Data Capture is part of a pilot.</li> </ul>
Version	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The version number of this secret. The version number is unique within your org.</p>

## Usage

Use this object to create or update an org-specific tenant secret or customer-supplied key material.

**Example 1:** Build an automated tenant secret creation and activation solution similar to the following.

1. Start by creating an Apex class to create the tenant secret. Specify the value of the tenant secret to encrypt data of a particular type.

```
global class CreateNewSecret implements Schedulable {
    global void execute(SchedulableContext SC) {
        TenantSecret secret = new TenantSecret ();
        secret.description = 'Created new secret from scheduled job';
        secret.type= 'SearchIndex';
        insert secret;
    }
}
```

 **Note:** `Type` is available in API version 39.0 and later. `Type` is optional; all tenant secrets default to the `Data` type.

2. Schedule the Apex class to run at the specified interval.

This Apex code only needs to be run a single time to schedule the job. This code runs the job every 90 days.

```
CreateNewSecret secret = new CreateNewSecret();
String schedule = '0 0 0 1 JAN,APR,JUL,OCT ?';
String jobID = system.schedule('Automated secret creation and activation', schedule,
secret);
```

3. Validate that the job is scheduled.
4. Validate that tenant secrets are created after the job is run.

**Example 2:** Upload a customer-supplied tenant secret or customer-supplied data encryption key.

1. Create a certificate that's compatible with customer-supplied key material. See [Generate a BYOK-Compatible Certificate](#) in Salesforce Help.
2. Then upload your matching key material and key material hash. Include the unique name of the compatible certificate. The key material is uploaded in encrypted form.

```
TenantSecret secret = new TenantSecret ();
secret.description = 'New uploaded secret';
secret.type= 'Data';
secret.SecretValue = ...
EncodingUtil.base64Decode('...');;
secret.SecretValueCertificate = ...;
secret.SecretValueHash = ...
EncodingUtil.base64Decode('...');
insert secret;
```

You can use this [script to generate a customer-supplied tenant secret](#) and tenant secret hash.

3. Validate that the key material is uploaded.

**Example 3:** Opt out of key derivation on a key-by-key basis when you upload key material. When you upload your key material, specify 'Source':Uploaded and 'KeyDerivationMode': 'NONE', and set non-null values for the SecretValueCertificate, SecretValue, and SecretValueHash.

**Example 4:** Import a tenant secret of the Data type.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = "<previously_exported_secret_as_a_String>";
update secret;
```

**Example 5:** Export a tenant secret by writing the secret.SecretValue to a file. Here's an example that uses a tenant secret of the SearchIndex type.

```
TenantSecret secret = [SELECT SecretValue FROM TenantSecret WHERE Type = 'TenantSecret'
AND Version = 2];
secret.SecretValue =...;
update secret;
```

**Example 6:** Destroy a tenant secret of the Data type.

 **Warning:** Your tenant secret is unique to your organization and to the specific data to which it applies. Once you destroy a tenant secret, related data is not accessible unless you previously exported the key and then import the key back into Salesforce.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = NULL;
```

```
secret.Status = Destroyed;
update secret;
```

**Example 7:** Change the `Status` of a tenant secret from `Archived` to `Destroyed`. Include the `SecretValue` and new tenant secret `Status`.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.Status = Destroyed;
update secret;
```

Cache-Only Key Service customers can change the `Status` of cache-only key tenant secrets. For example, reactivate a cache-only key by changing its `Status` from `Destroyed` to `Active`.

**Example 8:** Create a callout connection that fetches a cache-only key tenant secret from a key service outside of Salesforce.

1. Make sure that your org has at least one active `Data` in Salesforce key, either Salesforce-generated or customer-supplied. Then turn on `Allow Cache-Only Keys with BYOK` from the `Advanced Settings` page in `Setup`.
2. Create a certificate that's compatible with customer-supplied key material. See [Generate a BYOK-Compatible Certificate](#) in Salesforce Help.
3. [Create and assemble your key material.](#)
4. Create a named credential to serve as your authenticated callout mechanism. You can define your named credential through `Setup` or [directly with Apex](#). Specify a BYOK-compatible certificate and an `HTTPS` endpoint.
5. Configure the connection to your remote key service. This connection uses named credential and its associated certificate to fetch a specified cache-only key tenant secret.

```
remote_params = { 'Source': 'Remote',
  'RemoteKeyIdentifier': ...,
  'RemoteKeyServiceId': ...,
  'RemoteKeyCertificate': ...}

sf.TenantSecret.create(remote_params)
```

## Territory

Represents a flexible collection of accounts and users where the users have at least read access to the accounts, regardless of who owns the accounts. Only available if territory management has been enabled for your organization.

 **Note:** The original territory management feature is scheduled for retirement for all customers as of Summer '21. After the feature is retired, users can't access the original territory management feature and its underlying data. We encourage you to migrate to Enterprise Territory Management. We also strongly recommend that you keep a comprehensive backup of your territory data while you're still using the original territory management feature. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Spring '20 and later, only standard and partner users can access this object, and only users with the Manage Territories permission can edit this object.

### Fields

Field	Details
AccountAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Account access level granted to users assigned to this territory.</p>
CaseAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Group, Sort, Update</p> <p><b>Description</b> Case access level granted to users assigned to this territory.</p>
ContactAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A value that represents the type of access granted to the target Group, UserRole, or User for any associated contacts. The possible values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Read</li> <li>• Edit</li> </ul> <p> <b>Note:</b> When DefaultContactAccess is set to "Controlled by Parent," you can't create or update this field.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> A description of the territory that is 1,000 characters or less.</p>

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Territory Name</b> in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
ForecastUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Forecast Manager, who is the user to whom forecasts from this territory's child territories roll up.</p>
MayForecastManagerShare	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the forecast manager can manually share their own forecast.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> A name for the territory. Limit is 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
OpportunityAccessLevel	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Opportunity access level granted to users assigned to this territory.</p>
ParentTerritoryID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Territory immediately above this territory in the territory hierarchy. Label is <b>Parent Territory ID</b>.</p>
RestrictOppTransfer	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Update</p> <p><b>Description</b> Indicates whether the opportunities associated with this territory are kept within the bounds of this territory and this territory's children when account assignment rules are run (<code>true</code>), or if opportunities associated with this territory can be assigned to other nodes of the territory hierarchy when account assignment rules are run (<code>false</code>). Label is <b>Confine Opportunity Assignment</b>.</p>

## Usage

Use the Territory object to query your organization's territory hierarchy. Use it to obtain valid territory IDs when querying or modifying records associated with territories.

SEE ALSO:

- [AccountTerritoryAssignmentRule](#)
- [AccountTerritoryAssignmentRuleItem](#)
- [UserTerritory](#)

## Territory2

Represents a sales territory. Available only if Enterprise Territory Management has been enabled for your organization.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
<code>AccountAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Represents the default account record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> <li>• Read Only</li> <li>• Read/Write</li> <li>• Owner</li> </ul>
<code>CaseAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Represents the default case record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> <li>• Private</li> <li>• Read Only</li> <li>• Read/Write</li> </ul>
<code>ContactAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Represents the default contact record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> <li>• Private</li> <li>• Read Only</li> <li>• Read/Write</li> </ul>

Field Name	Details
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The description of the territory. The field label in the user interface is <code>Territory Description</code>.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Territory Name</code>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
ForecastUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Unique identifier of a territory's forecast manager. To select a <code>ForecastUserId</code>, select someone in the list of users assigned to the territory.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the territory. The field label in the user interface is <code>Territory Label</code>.</p>
OpportunityAccessLevel	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Represents the default opportunity record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> <li>• Private</li> <li>• Read Only</li> <li>• Read/Write</li> </ul>
ParentTerritory2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the territory's parent territory (if any). If the territory has no parent territory, this value is null.</p>
Territory2ModelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the territory model that the territory belongs to.</p>
Territory2TypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the territory type that the territory belongs to.</p>

## Territory2Model

Represents a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
ActivatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory model was activated.</p>
DeactivatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the territory model was archived.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The description of the territory model.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Territory Model Name</code>.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is</p>

Field Name	Details
	specified, performance may slow while Salesforce generates one for each record.
LastOppTerrAssignEndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read-only. The date when the opportunity territory assignment filter was last run. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33).</p>
LastRunRulesEndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the last rules run was completed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The territory model name. The field label in the user interface is <code>Label</code>.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The state of the territory model. Values are: <code>Planning</code>, <code>Activating</code>, <code>Activation Failed</code>, <code>Active</code>, <code>Archiving</code>, <code>Archiving Failed</code>, <code>Archived</code>, <code>Deleting</code>, and <code>Deletion Failed</code>.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [Territory2ModelFeed](#)

Feed tracking is available for the object.

**Territory2ModelHistory**

History is available for tracked fields of the object.

## Territory2ModelHistory

---

Represents the history of changes to the values in the fields on a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field whose value was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the changed field.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The previous value of the changed field.</p>

Field Name	Details
Territory2ModelId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the territory model whose history is tracked.</p>

## Usage

This object is automatically generated whenever any field value changes on a territory model record. Use this object to identify those changes.

## Territory2Type

Represents a category for territories (Territory2). Every Territory2 must have a Territory2Type. Available only if Enterprise Territory Management has been enabled for your organization.

## Supported Calls

`create()`, `delete()`, `describeSOjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object.

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The description of the territory type.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

**Field Name****Details****Description**

Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is `Territory Type Name`.

**Note:** When creating large sets of data, always specify a unique `DeveloperName` for each record. If no `DeveloperName` is specified, performance may slow while Salesforce generates one for each record.

Language

**Type**

picklist

**Properties**

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

**Description**

The language of the master label in the user interface.

MasterLabel

**Type**

string

**Properties**

Create, Filter, Group, Sort, Update

**Description**

Required The user interface label for the territory type.

Priority

**Type**

int

**Properties**

Create, Filter, Group, SortUpdate

**Description**

Required. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Lets you specify a priority for a territory type. For opportunity assignments, the filter examines all territories assigned to the account that the opportunity is assigned to. The account-assigned territory whose territory type priority is highest is then assigned to the opportunity. The `priority` field value on each territory type must be unique. Further, if there are multiple territories with the same territory type (and therefore the same priority) assigned to the account, no territory is assigned to the opportunity.

## TestSuiteMembership

---

Associates an Apex class with an ApexTestSuite. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

The `enableApexTestReqViewSetup` field on the `ApexSettings` metadata type controls the activation of the critical update “Require View Setup permission to access Apex test data”. In API version 49.0 and later, when the field is set to `true`, users must have the View Setup and Configuration permission to access this object.

## Fields

Field Name	Description
<code>ApexClassId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The Apex class whose tests are to be executed.</p>
<code>ApexTestSuiteId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The test suite to which the Apex class is assigned.</p>

## Usage

Insert a `TestSuiteMembership` object using an API call to associate an Apex class with an `ApexTestSuite` object. (`ApexTestSuite` and `TestSuiteMembership` aren't editable through Apex DML.) To remove the class from the test suite, delete the `TestSuiteMembership` object. If you delete an Apex test class or test suite, all `TestSuiteMembership` objects that contain that class or suite are deleted.

The following SOQL query returns the membership object that relates this Apex class to this test suite.

```
SELECT Id FROM TestSuiteMembership WHERE ApexClassId = '01pD0000000Fhy9IAC'
AND ApexTestSuiteId = '05FD00000004CDBMA2'
```

SEE ALSO:

[ApexTestSuite](#)

# ThirdPartyAccountLink

---

Represents the list of external users who authenticated using an Auth. Provider. This object is available in API version 32.0 and later.

A list of third-party account links is generated when users of an organization authenticate using an external Auth. Provider. Use this object to list and revoke a given user's social sign-on connections (such as Facebook®).

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field Name	Details
Handle	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The username in the third-party system.</p>
IsNotSsoUsable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Support for single sign-on.  If <i>true</i>, the link cannot be used for a single sign-on flow. It is only available OAuth access and refresh tokens.</p>
Provider	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The third-party account provider name.</p>
RemoteIdentifier	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique ID for the user in the third-party system.</p>

Field Name	Details
<code>SsoProvider</code>	<p><b>Type</b> <a href="#">AuthProvider</a> on page 367</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The foreign key to the AuthProvider of the third-party system.</p>
<code>SsoProviderId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID associated with the <code>SsoProvider</code> value.</p>
<code>SsoProviderName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The name associated with the AuthProvider of the third-party system, in case the user has no access to the provider foreign key (the <code>SsoProvider</code> value).</p>
<code>ThirdPartyAccountLinkKey</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A concatenated string including the organization ID, the <code>SsoProviderId</code> value, the <code>SsoProvider</code> value, and the <code>RemoteIdentifier</code> value.</p>
<code>UserId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The Salesforce user associated with this third-party account link.</p>

## Usage

Administrators (with the “Manage Users” permission) querying this object can see all the links for all users in the organization. Without the “Manage Users” permission, users can only retrieve their own links. A user might not have access to the `SsoProvider` value (the foreign key). In this case, use the `SsoProviderName` to render the name of the provider for the associated link.

Use the Apex method `Auth.AuthToken.revokeAccess()` to revoke a link.

To make the `ThirdPartyAccountLink` standard object writable for Salesforce admins, contact Salesforce Customer Support. With this feature, you can easily add or delete third-party account links using the API, but you can’t update existing account links.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don’t miss any records, issue a `COUNT()` query in a `SELECT` clause for `ThirdPartyAccountLink`. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `USERID`, to return subsets of less than 2500 records.

## ThreatDetectionFeedback

---

Represents feedback provided by a user about a Threat Detection event that occurred in your org. The feedback specifies whether the event was malicious, suspicious, not a threat, or unknown. Each `ThreatDetectionFeedback` object is associated with one of these Threat Detection storage events: `CredentialStuffingEventStore`, `ReportAnomalyEventStore`, or `SessionHijackingEventStore`. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `update()`, `upsert()`

## Fields

Field	Details
<code>LastReferencedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
<code>LastViewedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, it’s possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>

Field	Details
Response	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Describes the severity of the threat. Possible values are:</p> <ul style="list-style-type: none"><li>• Malicious</li><li>• Not a Threat</li><li>• Suspicious</li><li>• Unknown</li></ul>
ThreatDetectionEventId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Reference to the unique ID of one of these associated Threat Detection storage events:</p> <ul style="list-style-type: none"><li>• <a href="#">CredentialStuffingEventStore</a></li><li>• <a href="#">ReportAnomalyEventStore</a></li><li>• <a href="#">SessionHijackingEventStore</a></li></ul> <p>For example, 0fjRM000000005p.</p>
ThreatDetectionFeedbackNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Auto-generated number used as the unique name for this object.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The origin user's unique ID. For example, 00500000000123.</p>
Username	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The origin username in the format of <code>user@company.com</code> at the time the object was created.</p>

## Associated Object

This object has the following associated object. It's available in the same API version as this object.

### ThreatDetectionFeedbackFeed

Feed tracking is available for the object.

SEE ALSO:

[Salesforce Help: Threat Detection](#)

## TimeSheet

Represents a schedule of a service resource's time in field service. This object is available in API v47.0 and later.

Time sheets are composed of time sheet entries, which typically track individual tasks like travel or asset repair.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>

Field Name	Details
EndDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The last day the time sheet covers.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the time sheet.</p>
ServiceResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The service resource whose time is being tracked with the time sheet.</p>
StartDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The first day the time sheet covers.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the time sheet. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• New</li> <li>• Submitted</li> <li>• Approved</li> </ul>
TimeSheetEntryCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read Only) The number of related time sheet entries.</p>
TimeSheetNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> An auto-generated number identifying the time sheet.</p>
TotalDurationInHours	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in hours.</p>
TotalDurationInMinutes	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in minutes.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### TimeSheetFeed

Feed tracking is available for the object.

### TimeSheetHistory

History is available for tracked fields of the object.

### TimeSheetOwnerSharingRule

Sharing rules are available for the object.

### TimeSheetShare

Sharing is available for the object.

## TimeSheetEntry

Represents a span of time that a service resource spends on a field service task.

Time sheets are composed of time sheet entries. Time sheet entries typically track individual tasks like travel or asset repair.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
CurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p> <p>Time sheet entries inherit their time sheet's currency code. Updates to a time sheet's currency code aren't reflected in existing time sheet entries' currency code.</p>
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>Notes on how the time was spent. For example, "This service took longer than normal because the machine was jammed."</p>
EndTime	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The date and time the activity finished.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this record. StartTime	<p><b>Type</b></p> <p>dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time the activity began.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the time sheet entry. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• New</li> <li>• Submitted</li> <li>• Approved</li> </ul>
Subject	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Activity performed; for example, repair, lunch, or travel.</p>
TimeSheetEntryNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, Sort</p> <p><b>Description</b> An auto-generated number identifying the time sheet entry.</p>
TimeSheetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The time sheet associated with the time sheet entry.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The type of work performed. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• Direct</li> <li>• Indirect</li> </ul>
WorkOrderId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The work order related to the time sheet entry. Work orders are searchable by their content.</p>
WorkOrderLineItemId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The work order line item related to the time sheet entry. Work order line items are searchable by their content.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### TimeSheetEntryFeed

Feed tracking is available for the object.

### TimeSheetEntryHistory

History is available for tracked fields of the object.

## TimeSlot

Represents a period of time on a specified day of the week during which field service work can be performed in Field Service Lightning and Lightning Scheduler. Operating hours consist of one or more time slots. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
DayOfWeek	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The day of the week when the time slot takes place.</p>
EndTime	<p><b>Type</b> time</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The time when the time slot ends.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MaxAppointments	<p><b>Type</b> integer</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Maximum number of appointments for a single time slot. Available in API version 47.0 and later.</p>

Field Name	Details
OperatingHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The operating hours that the time slot belongs to. An operating hours' time slots appear in the Operating Hours related list.</p>
StartTime	<p><b>Type</b> time</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The time when the time slot starts.</p>
TimeSlotNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the time slot. The name is auto-populated to a day and time format—for example, <code>Monday 9:00 AM - 10:00 PM</code>—but you can manually update it if you wish.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of time slot. Possible values are <i>Normal</i> and <i>Extended</i>. You may choose to use <i>Extended</i> to represent overtime shifts.</p>
WorkTypeGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Work type group assigned to the time slot. Available in API version 47.0 and later.</p>

## Usage

Operating hours are composed of time slots, which indicate the hours of operation for a particular day. After you create operating hours, create time slots for each day. For example, if the operating hours should be 8 AM to 5 PM Monday through Friday, create five time slots, one per day. To reflect breaks such as lunch hours, create multiple time slots in a day: for example, *Monday 8:00 AM - 12:00 PM* and *Monday 1:00 PM - 5:00 PM*.

**Tip:** Time slots don't come with any built-in rules, but you can create Apex triggers that limit time slot settings in your org. For example, you may want to restrict the start and end times on time slots to half-hour increments, or to prohibit end times later than 8 PM.

## TimeSlotHistory

---

Represents the history of changes made to tracked fields on a time slot. This object is available in API version 38.0 and later.

## Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled in your organization, and field tracking for time slot fields must be configured.

## Fields

Field Name	Details
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The value of the field before it was changed.</p>
TimeSlotId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the time slot being tracked. The history is displayed on the detail page for this record.</p>

## Topic

Represents a topic on a Chatter post or record. This object is available in API version 28.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Fields

Field Name	Details
Description	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Description of the topic.</p>
ManagedTopicType	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Type of managed topic. Values are:</p> <ul style="list-style-type: none"> <li>• Content</li> <li>• Featured</li> <li>• Navigational</li> </ul> <p>This field is available in API version 44.0 and later.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p> <b>Note:</b> You can change only the spacing and capitalization of a topic name with the update property.</p> <p><b>Description</b> Name of the topic.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> Identifier of the community to which the topic belongs. This field is available only if Salesforce Communities is enabled in your organization.</p>
TalkingAbout	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Number of people talking about the topic over the last two months, based on factors such as topic additions and comments on posts with the topic.</p>

## Usage

Use this object to query a specific topic or to get a list of all topics, even those used solely in private groups and on records, and the number of people talking about them.

Use this object to create, edit, or delete topics. To create a topic, you must have the “Create Topics” permission. To edit a topic, you must have the “Edit Topics” permission. To delete a topic, you must have the “Delete Topics” or “Modify All Data” permission.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### TopicFeed (API version 29.0)

Feed tracking is available for the object.

## TopicAssignment

Represents the assignment of a topic to a specific feed item, record, or file. This object is available in API version 28.0 and later.

Administrators must enable topics for objects before users can add topics to records of that object type. Topics for most objects are available in API version 30.0 and later. Topics for ContentDocument are available in API version 37.0 and later.

## Supported Calls

`create()`, `describeSObjects()`, `delete()`, `getDeleted()`, `getUpdate()`, `query()`, `retrieve()`

## Fields

Field Name	Details
<code>EntityId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Identifier of the feed item, record, or file.</p>
<code>EntityKeyPrefix</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The first three digits of the <code>EntityID</code> field, which identify the object type (account, opportunity, etc). This read-only field is available in API version 32.0 and later.  Interface label is "Record Key Prefix," which appears only in reports.</p>
<code>EntityType</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The standard name for the object type (account, opportunity, etc). This read-only field is available in API version 33.0 and later.  Interface label is "Object Type," which appears only in reports.</p> <p> <b>Tip:</b> In most cases, you should use this field rather than <code>EntityKeyPrefix</code>, which exists primarily to support older reports.</p>
<code>NetworkId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>Identifier of the <a href="#">community</a> to which the TopicAssignment belongs. This field is available only if Salesforce Communities is enabled in your organization.</p>
TopicId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Identifier of the topic.</p>

## Usage

Use this object to query the assignments of topics to feed items, records, or files. To assign or remove topics, you must have the “Assign Topics” permission.

In SOQL `SELECT` syntax, this object supports nested semi-joins, allowing queries on Knowledge articles assigned to specific topics. For example:

```
SELECT parentId FROM KnowledgeArticleViewStat
  WHERE parentId in (SELECT KnowledgeArticleId FROM KnowledgeArticleVersion
  WHERE publishStatus = 'Online' AND language = 'en_US'
  AND Id in (select EntityId from TopicAssignment where TopicId ='0T0xx0000000xxx'))
```

No SOQL limit if logged-in user has “View All Data” permission. If not, do one of the following:

- Specify a `LIMIT` clause of 1,100 records or fewer.
- Filter on `Id` or `Entity` when using a `WHERE` clause with “=”.

SEE ALSO:

- [Topic](#)
- [FeedItem](#)

## TopicLocalization—Beta

Represents the translated version of a topic name. Topic localization applies only to navigational and featured topics in communities. This object is available in API version 33.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Users with the Translation Workbench enabled can view topic translations, but the “Customize Application,” “Manage Translation,” or “Manage Categories” permission is required to create or update them.

## Fields

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The combined language and locale ISO code, which controls the language for labels displayed in an application. (The values in this field are not related to the default locale selection.)</p> <p>This picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> <li>• Chinese (Simplified): zh_CN</li> <li>• Chinese (Traditional): zh_TW</li> <li>• Danish: da</li> <li>• Dutch: nl_NL</li> <li>• English: en_US</li> <li>• Finnish: fi</li> <li>• French: fr</li> <li>• German: de</li> <li>• Italian: it</li> <li>• Japanese: ja</li> <li>• Korean: ko</li> <li>• Norwegian: no</li> <li>• Portuguese (Brazil): pt_BR</li> <li>• Russian: ru</li> <li>• Spanish: es</li> <li>• Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.</li> <li>• Swedish: sv</li> <li>• Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.</li> </ul> <p>The following end-user only languages are available.</p> <ul style="list-style-type: none"> <li>• Arabic: ar</li> <li>• Bulgarian: bg</li> </ul>

Field Name	Details
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID that identifies the topic. After a <code>TopicLocalization</code> record is created, this ID can't be modified.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The translated text for the topic name. Label is <b>Topic Name Translation</b>.</p>

## TopicUserEvent

---

Represents an action (such as comment, post, like, or share) made by a user on a topic. This object is available in API version 42.0 and later.

## Supported Calls

`delete()`, `query()`, `retrieve()`

## Special Access Rules

Only users with the "Modify All Data" permission can view and delete these data.

## Fields

Field	Details
ActionEnum	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The action taken by a user on a topic. The possible values are:</p> <ul style="list-style-type: none"> <li>• LIKE</li> <li>• COMMENT</li> <li>• POST</li> <li>• ASSIGN</li> <li>• SHARE</li> <li>• FAVORITE</li> <li>• UNFAVORITE</li> <li>• AT_MENTION</li> <li>• BANG_MENTION</li> <li>• COMMENT_LIKE</li> <li>• USER_ENDORSEMENT</li> <li>• SKILL_PEER_ENDORSEMENT</li> <li>• SKILL_SELF_ENDORSEMENT</li> <li>• BEST_ANSWER</li> </ul>
NetworkID	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the network (community) where the action was performed.</p>
TopicId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Identifier of the topic.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Unique Salesforce user ID.</p>

## Usage

Use the TopicUserEvent object to delete topic-related activities by community users who would like all their topic-related activities to be removed from a community.

## TransactionSecurityPolicy

Represents a transaction security policy definition.

This object is available in API version 42.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
ActionConfig	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> Describes the action to take when the matching Transaction Security policy is triggered. Also indicates the type of notifications selected and the ID of the intended recipient. The recipient must be active and assigned the Modify All Data and View Setup user permissions. Multiple actions can be taken. The actions available depend on the <a href="#">Event Type</a> field.</p>

Field	Details
ApexPolicyId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Represents the Apex <code>TxnSecurity.PolicyCondition</code> or <code>TxnSecurity.EventCondition</code> interface for this policy.</p>
BlockMessage	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The custom message a user receives when their action is blocked by a policy. Used in Real-Time Event Monitoring only. Maximum of 1000 characters. This field appears as null when the default message option is selected and is available only when <code>EventName</code> is set to <code>ApiEvent</code>, <code>ListViewEvent</code>, or <code>ReportEvent</code>. Available in API version 49.0 and later.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The description entered for this policy.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The API, or program name, for this policy.</p>
EventName	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Used in Real-Time Event Monitoring only. Indicates the name of the event the policy monitors. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>ApiEvent</code>—Tracks these user-initiated read-only API calls: <code>query()</code>, <code>queryMore()</code>, and <code>count()</code>. Captures API requests through SOAP API, REST API,</li> </ul>

Field	Details
	<p>and Bulk API for the Enterprise and Partner WSDLs. Tooling API calls and API calls originating from a Salesforce mobile app aren't captured.</p> <ul style="list-style-type: none"> <li>• <b>CredentialStuffingEventStore</b>—Tracks when a user successfully logs into Salesforce during an identified credential stuffing attack. Credential stuffing refers to large-scale automated login requests using stolen user credentials. This value is available in API 49.0 and later.</li> <li>• <b>ListViewEvent</b>—Tracks when users access data with list views using Lightning Experience, Salesforce Classic, or the API. It doesn't track list views of Setup entities.</li> <li>• <b>LoginEvent</b>—LoginEvent tracks the login activity of users who log in to Salesforce.</li> <li>• <b>ReportAnomalyEventStore</b>—Tracks anomalies in how users run or export reports, including unsaved reports. This value is available in API 49.0 and later.</li> <li>• <b>ReportEvent</b>—Tracks when reports are run in your org.</li> <li>• <b>SessionHijackingEventStore</b>—Tracks when unauthorized users gain ownership of a Salesforce user's session with a stolen session identifier. To detect such an event, Salesforce evaluates how significantly a user's current browser fingerprint diverges from the previously known fingerprint using a probabilistically inferred significance of change. This value is available in API 49.0 and later.</li> </ul>
EventType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Used in Legacy Transaction Security only. Indicates the type of event the policy monitors. Valid values are:</p> <ul style="list-style-type: none"> <li>• <b>AccessResource</b>—Notifies you when the selected resource has been accessed.</li> <li>• <b>AuditTrail</b>—Reserved for future use.</li> <li>• <b>DataExport</b>—Notifies you when any API query is made, such as from the Data Loader API client, or when a Report export occurs.</li> <li>• <b>Entity</b>—Notifies you on use of an object type such as an authentication provider or chatter post.</li> <li>• <b>Login</b>—Notifies you when a user logs in.</li> </ul>
ExecutionUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Used in Legacy Transaction Security only. The ID of an active user who is assigned the Modify All Data and View Setup user permissions.</p>

Field	Details
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The policy's name.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values:</p> <ul style="list-style-type: none"> <li>• In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer.</li> <li>• In organizations that are not Developer Edition organizations, <code>NamespacePrefix</code> is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.</li> </ul>
ResourceName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Used in Legacy Transaction Security only. A resource used to narrow down the conditions under which the policy triggers. For example, with a <code>DataExport</code> event, you can select a resource <code>Lead</code> to specifically monitor export activity occurring on your <code>Lead</code> entities. The resources available depend on the <code>EventType</code> field.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates whether the policy is active. Valid values are:</p>

Field	Details
	<ul style="list-style-type: none"> <li>Disabled</li> <li>Enabled</li> </ul>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of validation that the policy uses. The valid values are:</p> <ul style="list-style-type: none"> <li>CustomApexPolicy— Created with Apex editor.</li> <li>CustomConditionBuilderPolicy— Created with Condition Builder</li> </ul>

## TwoFactorInfo

Stores a user's secret for two-factor operations. Use this object when customizing two-factor authentication in your organization. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

You need the "Manage Two-Factor Authentication in API" permission to create or update this object.

## Fields

Field Name	Details
SharedKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Group, Sort, Update</p> <p><b>Description</b> This field is never read-enabled, though it is write-enabled. A request for this value always returns null. The value must be a base32-encoded string of a 20-byte secret.</p>

Field Name	Details
	<p>You can use the Apex method <code>Auth.SessionManagement.getQrCode()</code> to get a value to write to this field.</p> <p> <b>Note:</b> If you write a secret to this field, in API version 37.0 and later the user gets an email notification that a new identity verification method was added to the user's account.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The two-factor method.</p> <ul style="list-style-type: none"> <li>• <code>TOTP</code>—The time-based one-time password.</li> </ul>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID for the user who's associated with the authentication secret.</p>

## TwoFactorMethodsInfo

Stores information about which identity verification methods a user has registered. This object is available in API version 37.0 and later.

### Supported Calls

`describeSObjects()`, `query()`

### Special Access Rules

You need the "Manage Two-Factor Authentication in API" permission to access this object.

### Fields

Field Name	Details
ExternalId	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A unique system-generated numerical identifier for the user.</p>
HasSalesforceAuthenticator	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has connected the Salesforce Authenticator mobile app. The user can verify identity by approving a notification sent to the app. If the user sets a trusted location in the app, Salesforce Authenticator verifies automatically when the user is in the trusted location.</p>
HasTempCode	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has a temporary verification code generated by a Salesforce admin or user with "Manage Two-Factor Authentication in User Interface" permission.</p>
HasTotp	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has connected an authenticator app that generates verification codes, also known as time-based one-time passwords (TOTP). The user can verify identity by entering a code generated by the app.</p>
HasU2F	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has registered a U2F security key. The user can verify identity by inserting the security key into a USB port to generate credentials.</p>

Field Name	Details
HasUserVerifiedEmailAddress	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has self-registered and verified an email address. This parameter is available in API version 43 and later.</p>
HasUserVerifiedMobileNumber	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has self-registered and verified a mobile phone number. Salesforce can text a verification code to the user at that number. This parameter is available in API version 43 and later.</p>
HasVerifiedMobileNumber	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the user has a mobile phone number that was added by an administrator or self-registered by the user. Salesforce can text a verification code to the user at that number.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the user who's associated with the identity verification methods.</p>

## TwoFactorTempCode

Stores information about a user's temporary identity verification code. This object is available in API version 37.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

You need the “Manage Two-Factor Authentication in API” permission to access this object.

### Fields

Field Name	Details
Expiration	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The date and time when the temporary verification code expires. The code expires in 1 to 24 hours after it’s generated. Salesforce admins and non-admin users with the “Manage Two-Factor Authentication in User Interface” permission set the expiration time when generating the code.</p>
Identifier	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique identifier for the temporary code. This is a required field that can take any value.</p>
TempCode	<p><b>Type</b> encryptedstring</p> <p><b>Description</b> A request for this value always returns <code>null</code>.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID for the user who’s associated with the temporary verification code.</p>

## UiFormulaCriterion

Represents a filter that helps define component visibility on a Lightning page. This object is available in API version 47.0 and later.

## Supported Calls

describeSObjects(), query(), retrieve()

## Fields

Field	Details
LeftHandSide	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Represents the field that the filter is based on. For example, <code>AMOUNT</code>.</p>
OperatorId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the filter operator. Valid values are:</p> <ul style="list-style-type: none"> <li>• <code>CONTAINS</code></li> <li>• <code>EQUAL</code></li> <li>• <code>GE</code>—greater than or equal</li> <li>• <code>GT</code>—greater than</li> <li>• <code>LE</code>—less than or equal</li> <li>• <code>LT</code>—less than</li> <li>• <code>NE</code>—not equal</li> </ul>
ParentKeyPrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the three-digit prefix of the parent ID.</p>
RightHandSide	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the value used to evaluate the component's visibility. For example, <code>1000000</code>.</p>

Field	Details
RuleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Represents the formula rule ID.</p>

## UiFormulaRule

Represents a set of one or more filters that define the conditions under which a component displays on a Lightning page. This object is available in API version 47.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Fields

Field	Details
AssociatedElementId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents a parent component that UiFormulaRule is associated with, such as PromptVersion.</p>
BooleanFilter	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the filter logic applied to UiFormulaRule. References the UI formula rule stored by UiFormulaCriterion based on the sortIndex, such as ((1 &amp;&amp; 3)    2).</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> Represents the API name of the UiFormulaRule.</p>
Formula	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Represents the formula source string of UiFormulaRule.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Represents the language of the UiFormulaRule.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Required. Represents the label of the UiFormulaRule.</p>
ParentKeyPrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Represents the three-digit prefix for AssociatedElementId.</p>

## UndecidedEventRelation

---

Represents event participants (invitees or attendees) with the status `Not Responded` for a given event. This object is available in API versions 29.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
EventId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the event.</p>
RelationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the ID of the invitee.</p>
RespondedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> This field is always null.</p>
Response	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates the content of the response field. Label is Comment.</p>
Type	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Indicates whether the invitee is a user, lead or contact, or resource.</p>

## Usage

### Query invitees who have not responded to an invitation to an event

```
SELECT eventId, type, response FROM UndecidedEventRelation WHERE
eventId='00UTD000000ZH5LA'
```

## User

---

Represents a user in your organization.

## Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

- To create or update a User record, you must have the “Manage Internal Users” permission. If the user is a Customer Portal user, you must have the “Manage Customer Users” permission. If the user is a partner portal user, you must have the “Manage External Users” permission.
- If [Communities](#) is enabled in your organization, to create or update external users for Customer Portal, partner portal, or Communities, you must also have the “Manage External Users” permission.
- Information in hidden fields in a user’s profile is not searchable by external users (with a portal profile) in a community. For example, if a user in a community has a hidden email address and an external user searches for it, the user record is not returned in the search results. Hidden field values are also not returned when external users perform searches on non-hidden fields. So if an external user searches for a user’s name (can’t be hidden), any hidden field values associated with the user record (for example, a hidden email address) are not returned in the search results.

Internal users from your organization who belong to the same community, however, can both search for and view hidden field values in search results.

- When requested by portal users, queries that look up to the User object, such as `owner.name` or `owner.email` might not return values when the portal user making the request doesn’t have Read access to the User record being queried.

The behavior depends on the number of domains associated with the lookup field. If the object can look up to more than one domain, `owner.name` returns a value, but other detail fields don’t. For example, Case owner can look up to the User or Queue objects. In this case, portal users can see only the value of `owner.name`. Other User detail fields, such as `owner.email` or `owner.phone` don’t return a value.

If the object can look up to only a single domain, such as Account owner, then no detail fields return values, including `owner.name`.

- To change ownership of a record by updating its `ownerId` field, you must have both the “Transfer Record” permission and Read access to the User record of the new record owner.
- To view the `NumberOfFailedLogins` field, you must have the “Manage User” permission.

## Fields

Field	Details
AboutMe	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Information about the user, such as areas of interest or skills. This field is available even if Chatter is disabled.</p>
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the Account associated with a Customer Portal user. This field is null for Salesforce users.</p>
Address (beta)	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
Alias	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The user's alias. For example, jsmith.</p>
BadgeText	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The community role, displayed on the user profile page just below the user name.</p>

Field	Details
BannerPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The URL for the user's banner photo. This field is available in API version 36.0 and later.</p>
CallCenterId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> If Salesforce CRM Call Center is enabled, represents the call center to which this user is assigned.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city associated with the user. Up to 40 characters allowed.</p>
CommunityNickname	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Name used to identify this user in the Community application, which includes the ideas and answers features.</p>
CompanyName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name of the user's company.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>ID of the Contact associated with this account. The contact must have a value in the <code>AccountId</code> field or an error occurs.</p>
Country	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The country associated with the user. Up to 80 characters allowed.</p>
CountryCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The ISO country code associated with the user.</p>
CurrentStatus	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Text that describes what the user is working on.</p> <p> <b>Note:</b> If you update this field, the API automatically adds a post of type <code>UserStatus</code> on the user's profile in Chatter.</p> <p>This field is deprecated in API version 25.0. To achieve similar behavior, post to the user directly by creating a <code>FeedItem</code> with the user's <code>ParentId</code>.</p>
DefaultCurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update</p> <p><b>Description</b></p> <p>The user's default currency setting for new records. For example, a user in France could have a <code>DefaultCurrencyIsoCode</code> set to Euros, and that would be their default currency in the application.</p> <p>Only applicable for organizations that use multiple currencies.</p>

Field	Details
DefaultDivision	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> This record's default division. Only applicable if divisions are enabled for your organization.</p>
DefaultGroupNotificationFrequency	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The default frequency for sending the user's Chatter group email notifications when the user joins groups. The valid values are:</p> <ul style="list-style-type: none"> <li>• P—Email on every post</li> <li>• D—Daily digests</li> <li>• W—Weekly digests</li> <li>• N—Never</li> </ul> <p>The default value is N. For Professional, Enterprise, Unlimited, and Developer Edition organizations that existed prior to API version 22.0, the default value remains D.</p> <p>This field is available in API version 21.0 and later.</p>
DelegatedApproverId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Id of the user who is a delegated approver for this user.</p>
Department	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The company department associated with the user.</p>
DigestFrequency	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The frequency at which the system sends the user's Chatter personal email digest. The valid values are:</p> <ul style="list-style-type: none"> <li>• D = Daily</li> <li>• W = Weekly</li> <li>• N = Never</li> </ul> <p>The default value is D.</p>
Division	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The division associated with this user, similar to Department and unrelated to <code>DefaultDivision</code>.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. The user's email address.</p>
EmailEncodingKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The email encoding for the user, such as <code>ISO-8859-1</code> or <code>UTF-8</code>.</p>
EmailPreferencesAutoBcc	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Determines whether the user receives copies of sent emails. This option applies only if compliance BCC emails are not enabled.</p>

Field	Details
EmployeeNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's employee number.</p>
Extension	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's phone extension number.</p>
Fax	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's fax number.</p>
FederationIdentifier	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> Indicates the value that must be listed in the <code>Subject</code> element of a Security Assertion Markup Language (SAML) <i>IDP certificate</i> to authenticate the user for a client application using single sign-on. This value must be specified if the <code>SAML User ID Type</code> is Assertion contains Federation ID from the User record. Otherwise, this field can't be edited.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's first name.</p>
ForecastEnabled	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the user is enabled as a forecast manager (<code>true</code>) or not (<code>false</code>). Forecast managers see forecast rollups from users below them in the forecast hierarchy.</p>
FullPhotoUrl	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The URL for the user's profile photo. This field is available even if Chatter is disabled.</p> <p>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.</p> <p>This field is available in API version 20.0 and later.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.</p>
IndividualId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the data privacy record associated with this user. This field is available if Data Protection and Privacy is enabled.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the user has access to log in (<code>true</code>) or not (<code>false</code>). You can modify a User's active status from the user interface or via the API.</p>
IsPartner	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter</p> <p><b>Description</b></p> <p>Indicates whether the user is a partner who has access to the partner portal (<code>true</code>) or not (<code>false</code>). This field is not available for release 9.0 and later. Instead, use <code>UserType</code> with the value <code>Partner</code> or <code>Power Partner</code>.</p>
IsPortalEnabled	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Indicates whether the user has access to Communities or portals (<code>true</code>) or not (<code>false</code>).</p> <p>This field is only available if one of the following conditions is true:</p> <ul style="list-style-type: none"> <li>• Communities are enabled in your organization and you have community or portal user licenses</li> <li>• Portals are enabled in your organization</li> </ul>
IsPortalSelfRegistered	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Indicates whether the user is a Customer Portal user who self-registered for your organization's Customer Portal (<code>true</code>) or not (<code>false</code>). This field is not available for release 9.0 and earlier.</p>
IsPrmSuperUser	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p>

## Field

## Details

**Description**

Available for partner portal users only. Indicates whether the user has super user access in the partner portal (`true`) or not (`false`).

This field is available in API version 24.0 and later.

**Note:** This field is not automatically enabled. Contact Salesforce to enable this field.

IsProfilePhotoActive

**Type**

boolean

**Properties**

Defaulted on create, Filter, Group, Sort

**Description**

Indicates whether a user has a profile photo (`true`) or not (`false`). This field is available in API version 36.0 and later.

JigsawImportLimitOverride

**Type**

int

**Properties**

Create, Filter, Group Nillable, Sort, Update

**Description**

The Data.com user's monthly addition limit. The value must be between zero and the organization's monthly addition limit. Label is **Data.com Monthly Addition Limit**. This field is available in API version 27.0 and later.

LanguageLocaleKey

**Type**

picklist

**Properties**

Create, Filter, Group, Restricted picklist, Sort, Update

**Description**

Required. The user's language, such as "French" or "Chinese (Traditional)." Label is **Language**.

**Note:** In API version 47.0 and later, when using the DescribeSObjectResult API to return PicklistEntry values from this picklist, the `active` value indicates whether the language is in the user's **Displayed Languages** (`true`) or the user's **Available Languages** (`false`). All other languages aren't in the returned `active` value array.

In API version 46.0 and earlier, the PicklistEntry `active` values indicate whether the language is in either the user's **Displayed Languages** or **Available Languages** lists (`true`) or not in either list (`false`).

Field	Details
LastLoginDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort, Nillable</p> <p><b>Description</b> The date and time when the user last successfully logged in. This value is updated if 60 seconds have elapsed since the user's last login.</p>
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The user's last name.</p>
LastReferencedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> date</p> <p><b>Properties</b> Filter, Nillable, Sort, Update</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Latitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -90 and 90 up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>

Field	Details
LocaleSidKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. This field is a restricted picklist field. The value of the field affects formatting and parsing of values, especially numeric values, in the user interface. It does not affect the API.</p> <p>The field values are named according to the language, and country if necessary, using two-letter ISO codes. The set of names is based on the ISO standard. You can also manually set a user's locale in the user interface, and then use that value for inserting or updating other users via the API.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
Manager	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> User lookup field used to select the user's manager. This field establishes a hierarchical relationship, preventing you from selecting a user that directly or indirectly reports to themselves.</p>
ManagerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The Id of the user who manages this user.</p>
MediumBannerPhotoUrl	<p><b>Type</b> url</p>

Field	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The URL for the medium-sized user profile banner photo.</p>
MiddleName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's middle name. Maximum size is 40 characters. Contact Salesforce Customer Support to enable this field.</p>
MobilePhone	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's mobile or cellular phone number.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Concatenation of <code>FirstName</code> and <code>LastName</code>. Limited to 121 characters.</p>
NumberOfFailedLogins	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of failed login attempts for the user's account. When the maximum number of failed login attempts is reached, the counter resets and the user's account is locked. If there's a successful login before the maximum number of failed login attempts is reached, the counter resets and the user's account remains unlocked.</p>
OfflineTrialExpirationDate	<p><b>Type</b> dateTime</p>

Field	Details
Phone	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time when the user's Connect Offline trial expires.</p>
PortalRole	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's phone number.</p>
PostalCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The role of the user in the Customer Portal (either Executive, Manager, User, or PersonAccount).  Prior to API version 16.0, you could set this field to null and the system automatically included a portal role. In API version 16.0 and above, when you set this field to null, a portal role is not automatically created. When this field is null and a <code>ContactId</code> is provided, the user is assigned to the User role.  The Update property is available in API version 43.0 and later.  The field is available if Customer Portal is enabled OR Communities is enabled and have available partner portal, Customer Portal, or High-Volume Portal User licenses.</p>
ProfileId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's postal or ZIP code. Label is <b>Zip/Postal Code</b>.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b> Required. ID of the user's Profile. Use this value to cache metadata based on profile. In earlier releases, this was <code>RoleId</code>.</p>
<code>ReceivesAdminInfoEmails</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the user receives email for administrators from Salesforce (<code>true</code>) or not (<code>false</code>).</p>
<code>ReceivesInfoEmails</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the user receives informational email from Salesforce (<code>true</code>) or not (<code>false</code>).</p>
<code>SenderEmail</code>	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The email address used as the From address when the user sends emails. This address is the same value shown in Setup on the My Email Settings page.</p>
<code>SenderName</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The name used as the email sender when the user sends emails. This name is the same value shown in Setup on the My Email Settings page.</p>
<code>Signature</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<b>Description</b> The signature text added to emails. This text is the same value shown in Setup on the My Email Settings page.
SmallBannerPhotoUrl	<b>Type</b> url <b>Properties</b> Filter, Nillable, Sort <b>Description</b> The URL for the small user profile banner photo.
SmallPhotoUrl	<b>Type</b> string <b>Properties</b> Filter, Nillable, Sort <b>Description</b> The URL for a thumbnail of the user's profile photo. This field is available even if Chatter is disabled.  The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.  This field is available in API version 20.0 and later.
State	<b>Type</b> string <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> The state associated with the User. Up to 80 characters allowed.
StateCode	<b>Type</b> picklist <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update <b>Description</b> The ISO state code associated with the user.
Street	<b>Type</b> textarea <b>Properties</b> Create, Filter, Group, Nillable, Sort, Update

Field	Details
	<p><b>Description</b> The street address associated with the User.</p>
Suffix	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's name suffix. Maximum size is 40 characters. Contact Salesforce Customer Support to enable this field.</p>
TimeZoneSidKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. This field is a restricted picklist field. A User time zone affects the offset used when displaying or entering times in the user interface. However, the API does not use a User time zone when querying or setting values.</p> <p>Values for this field are named using region and key city, according to ISO standards. You can also manually set one User time zone in the user interface, and then use that value for creating or updating other User records via the API.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user's business title, such as "Vice President."</p>
Username	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Contains the name that a user enters to log in to the API or the user interface. The value for this field must be in the form of an email address, using all lowercase characters. It must also be unique across all organizations. If you try to create or update a User with a duplicate value for this field, the operation is rejected.</p>

Field	Details
	<p>Each inserted User also counts as a license. Every organization has a maximum number of licenses. If you attempt to exceed the maximum number of licenses by inserting User records, the create is rejected.</p>
UserPermissionsCallCenterAutoLogin	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Required if Salesforce CRM Call Center is enabled. Indicates whether the user is enabled to use the auto login feature of the call center (<code>true</code>) or not (<code>false</code>).</p>

Field	Details
	<p><b>Description</b></p> <p>When <code>true</code>, redirects the user to the Lightning Experience interface. Label is <b>Switch to Lightning Experience</b>. This field is available in API version 35.0 and later.</p>
UserPreferencesNativeEmailClient	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Use this field to set a default email preference for the user's native email client. This field is available in API version 47.0 and later. The default value is <code>false</code>, corresponding to the Salesforce docked email composer.</p>
UserPreferencesOptOutOfTouch	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>This field is deprecated in API version 29.0. When <code>false</code>, the user automatically accesses the Salesforce Touch app when logging in to Salesforce from an iPad. If <code>true</code>, automatic access to the Salesforce Touch app is turned off and the user's iPad is directed to the full Salesforce site instead. The default value is <code>false</code>.</p> <p> <b>Note:</b> Salesforce Touch must be enabled before this field is visible.</p>
UserPreferencesPathAssistantCollapsed	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>When <code>true</code>, Sales Path appears collapsed or hidden to the user. This field is available in API version 35.0 and later.</p>
UserPreferencesProcessAssistantCollapsed	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p>

## Field

## Details

**Description**

When `true`, Sales Path appears collapsed or hidden to the user. This field is available in API versions 33.0 and 34.0 only. In API versions 35.0 and later, use `UserPreferencesPathAssistantCollapsed`.

---

`UserPreferencesReceiveNoNotificationsAsApprover`

**Type**

boolean

**Properties**

Create, Filter, Update

**Description**

Controls email notifications from the approval process for *approvers*.

- If `true`, emails are *disabled*.
- If `false`, emails are *enabled*.

The default value is `false`.

**Note:** The Receive Approval Request Emails setting in the UI controls this field and the `UserPreferencesReceiveNotificationsAsDelegatedApprover` field.

- Setting: **If I am an approver or delegated approver**

Result:

- `UserPreferencesReceiveNoNotificationsAsApprover = false`
- `UserPreferencesReceiveNotificationsAsDelegatedApprover = true`

- Setting: **Only if I am an approver**

Result:

- `UserPreferencesReceiveNoNotificationsAsApprover = false`
- `UserPreferencesReceiveNotificationsAsDelegatedApprover = false`

- Setting: **Only if I am a delegated approver**

Result:

- `UserPreferencesReceiveNoNotificationsAsApprover = true`
- `UserPreferencesReceiveNotificationsAsDelegatedApprover = true`

- Setting: **Never**

Result:

---

<p><code>UserPreferencesShowPostalCodeToExternalUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p>

## Field

## Details

**Description**

Indicates the visibility of the postal or ZIP code field in the user's contact information. Postal code is visible only to internal members of the user's organization when:

- This field is `false`. When `false`, this field returns the value `#N/A`.

Postal code is visible to external members in a community when:

- This field is `true`, or
- This field is `false` but `UserPreferencesShowPostalCodeToGuestUsers` is `true`, which overrides this field's value.

External users are users with Community, Customer Portal, or partner portal licenses.

The default value is `false`. This field is available in API version 26.0 and later.

---

`UserPreferencesShowPostalCodeToGuestUsers`

**Type**

boolean

**Properties**

Create, Filter, Update

**Description**

Indicates the visibility of the postal or ZIP code field in the user's contact information. When `true`, postal code is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowPostalCodeToExternalUsers`, making the user's postal code visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

---

`UserPreferencesShowProfilePicToGuestUsers`

**Type**

boolean

**Properties**

Create, Filter, Update

**Description**

Indicates the visibility of the user's profile photo. When `true`, the photo is visible to guest users in a community. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community.

---

Field	Details
	<p>When <code>false</code>, this field returns the stock photo. The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<code>UserPreferencesShowStateToExternalUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Indicates the visibility of the state field in the user's contact information. State is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul> <p>State is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowStateToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowStateToGuestUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Indicates the visibility of the state field in the user's contact information. When <code>true</code>, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowStateToExternalUsers</code>, making the user's state visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<code>UserPreferencesShowStreetAddressToExternalUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p>

## Field

## Details

Field	Details
	<p><b>Description</b></p> <p>Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is <code>false</code>. The address is visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowStreetAddressToGuestUsers</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Indicates the visibility of the street address field in the user's contact information. When <code>true</code>, the street address field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowStreetAddressToExternalUsers</code>, making the user's street address visible to guests.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 34.0 and later.</p>
<code>UserPreferencesShowTitleToExternalUsers</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Filter, Update</p> <p><b>Description</b></p> <p>Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul> <p>Title is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowTitleToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p>

Field	Details
	The default value is <code>true</code> . This field is available in API version 26.0 and later.
<code>UserPreferencesShowTitleToGuestUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Indicates the visibility of the business title field in the user's contact information. When <code>true</code>, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowTitleToExternalUsers</code>, making the user's title visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<code>UserPreferencesShowWorkPhoneToExternalUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is <code>false</code>. The number is visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowWorkPhoneToGuestUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Indicates the visibility of the work phone field in the user's contact information. When <code>true</code>, the work phone field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community.</p>

Field	Details
	<p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowWorkPhoneToExternalUsers</code>, making the user's work phone visible to guests.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 34.0 and later.</p>
<code>UserPreferencesSortFeedByComment</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> Specifies the data value used in sorting a user's feed. When <code>true</code>, the feed is sorted by most recent comment activity. When <code>false</code>, the feed is sorted by post date.</p>
<code>UserPreferencesSuppressEventSFXReminders</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> When <code>true</code>, event reminders don't appear. Corresponds to the <b>Show event reminders in Lightning Experience</b> checkbox on the Activity Reminders page in the user interface. This field is related to <code>UserPreference</code> and customizing activity reminders.</p>
<code>UserPreferencesSuppressTaskSFXReminders</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> When <code>true</code>, task reminders don't appear. Corresponds to the <b>Show task reminders in Lightning Experience</b> checkbox on the Activity Reminders page in the user interface. This field is related to <code>UserPreference</code> and customizing activity reminders.</p>
<code>UserPreferencesTaskRemindersCheckboxDefault</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> When <code>true</code>, a reminder popup is automatically set on the user's tasks. Corresponds to the <code>By default, set reminder on Tasks</code></p>

Field	Details
	<p><code>to...</code> checkbox on the Reminders page in the user interface. This field is related to <code>UserPreference</code> and customizing activity reminders.</p>
<p><code>UserPreferencesUserDebugModePref</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Update</p> <p><b>Description</b> When <code>true</code>, the Lightning Component framework executes in debug mode for the user. Corresponds to the <code>Debug Mode</code> checkbox on the Advanced User Details page of personal settings in the user interface.</p>
<p><code>UserRoleId</code></p>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the user's <code>UserRole</code>. Label is <b>Role ID</b>.</p>
<p><code>UserType</code></p>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Restricted picklist</p> <p><b>Description</b> The category of user license. Each <code>UserType</code> is associated with one or more <code>UserLicense</code> records. Each <code>UserLicense</code> is associated with one or more profiles. In API version 10.0 and later, valid values include:</p> <ul style="list-style-type: none"> <li>• Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is <b>Standard</b>.</li> <li>• PowerPartner: User whose access is limited because he or she is a partner and typically accesses the application through a partner portal or community. Label is <b>Partner</b>.</li> <li>• CSPLitePortal: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal or community. Label is <b>High Volume Portal</b>.</li> <li>• CustomerSuccess: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal User</b>.</li> <li>• PowerCustomerSuccess: user whose access is limited because he or she is an organization's customer and accesses the application through a Customer Portal. Label is <b>Customer Portal Manager</b>.</li> </ul>

Field	Details
	<p>Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.</p> <ul style="list-style-type: none"> <li>• CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is <b>Chatter Free</b>.</li> </ul>
WirelessEmail	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Wireless email address associated with this user. For use with Salesforce Wireless Edition. This field is available only if the Wireless and Email permissions are enabled for your organization.</p> <p> <b>Note:</b> As of November 2005, Salesforce Wireless Edition is no longer available for purchase. You can continue using Wireless Edition through the end of your existing contract term if you are one of the following:</p> <ul style="list-style-type: none"> <li>• A Professional Edition customer and purchased Wireless Edition prior to November 7, 2005.</li> <li>• An Enterprise Edition customer who has signed or renewed your Salesforce contract prior to November 7, 2005,</li> </ul>

## Usage

Use this object to query information about users and to provision and modify users in your organization. Unlike other objects, the records in the User table represent actual users—not data owned by users. Any user can query or describe User records.

For example, the following SOQL code finds users with a particular user role.

```
SELECT Id, Username
FROM User
WHERE UserRoleId='00ED0000000xicT'
```

Each portal user is associated with a portal account. A portal account can have a maximum of three portal roles (Executive, Manager, and User). You can select the default number of roles to be created from the user interface. The role hierarchy is maintained when you insert and delete portal roles, and roles are created bottom-up. Deleting the User role causes the Manager role to be renamed to User role. Deleting both the Executive and User roles causes the Manager role to be renamed to User role. Before deleting a role, you must assign users under that role to another role.

## Deactivate Users

You can't delete a user in the user interface or the API. You can deactivate a user in the user interface; and you can deactivate or disable a Customer Portal or partner portal user in the user interface or the API. Because users can never be deleted, we recommend that you exercise caution when creating them.

If you deactivate a user, any `EntitySubscription` where the user is associated with the `ParentId` or `SubscriberId` field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user `EntitySubscription` is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

## Passwords

For security reasons, you can't query User passwords via the API or the user interface. However, the API allows you to set and "reset" User passwords using the `setPassword()` and `resetPassword()` calls. The password lockout status and the ability to reset the User locked-out status is not available via the API. Check and reset the User password lockout status using the user interface.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### UserFeed (API version 18.0)

Feed tracking is available for the object.

### UserShare

Sharing is available for the object.

SEE ALSO:

[UserRole](#)

[UserLicense](#)

## UserAccountTeamMember

---

Represents a User on the default account team of another User.

See also `OpportunityTeamMember`, which represents a User on the opportunity team of an Opportunity

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal and Chatter Free users can't access this object.

## Fields

Field	Details
AccountAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> Required. For Account records that the user has added to his or her default account team, the level of access the account team member has. . The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for accounts.</p>
CaseAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> Required. Level of access that the account team member has to Case records related to the account. The possible values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Read</li> <li>• Edit</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for cases.</p>
ContactAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> Required. ForContact records related to the account, the level of access that the account team member has. The possible values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Read</li> <li>• Edit</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for contacts.</p>

Field	Details
	<p> <b>Note:</b> When <code>DefaultContactAccess</code> is set to <code>Controlled</code> by <code>Parent</code>, you can't create or update this field.</p>
<code>OpportunityAccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> Required. Level of access that the team member has to Opportunity records related to the account. The possible values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Read</li> <li>• Edit</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for opportunities.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Required. ID of the User who owns the default account team.</p>
<code>TeamMemberRole</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Role that the team member has on opportunities for which the user has added his or her default account team. The valid values are set by the organization's administrator in the Account Team Roles picklist. Label is <b>Team Role</b>.</p>
<code>UserId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> Required. ID of the User who is a member of the default account team. This field cannot be updated.</p>

## Usage

This object is available only in organizations that have enabled the account teams functionality, which can be done using the user interface.

If you attempt to create a record that matches an existing record, the create call updates any modified fields and returns the existing record.

You can set up a User record so the default account team includes the others who typically work with them on accounts.

## UserAppInfo

---

Stores the last Lightning app logged in to. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
<code>AppDefinitionId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the last Lightning app that the user logged in to. This field is available in API version 43.0 and later.</p>
<code>FormFactor</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The relative size of the app as displayed. Values are:</p> <ul style="list-style-type: none"> <li>• Small—suitable for a small device like a mobile phone</li> <li>• Medium—suitable for a tablet</li> <li>• Large—suitable for a large display device, like a monitor</li> </ul> <p>It's possible to have three versions of the app as the one last logged in to, where each version has a different form factor.</p>
<code>UserId</code>	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user that used this app.</p>

## UserAppMenuCustomization

Represents an individual user's settings for items in the app menu or App Launcher. This object is available in API version 35.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
ApplicationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The 15-character ID for the application associated with the menu item.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user for these specific settings.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p>

## Usage

See the AppMenuItem object for the organization-wide default settings. This object contains the fields representing any changes the user made to the menu.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### UserAppMenuCustomizationOwnerSharingRule

Sharing rules are available for the object.

### UserAppMenuCustomizationShare

Sharing is available for the object.

## UserAppMenuItem

---

Represents the organization-wide settings for items in the app menu or App Launcher that the requesting user has access to in Setup. This object is available in API version 35.0 and later.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `search()`

## Fields

Field Name	Details
AppMenuItemId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 15-character ID for the menu item.</p>
ApplicationId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 15-character ID for the application associated with the menu item.</p>
Description	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A description of this menu item.</p>
IconUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The icon for the menu item's application.</p>
InfoUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The URL for more information about the application.</p>
IsUsingAdminAuthorization	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the app is pre-authorized for certain users by the administrator.</p>
IsVisible	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> If <code>true</code>, the app is visible to the user.</p>
Label	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The app's name.</p>

Field Name	Details
LogoUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The logo for the menu item's application. The default is the initials of the Label value.</p>
MobileStartUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The location mobile users are directed to after they've authenticated. This is only used with connected apps.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The API name of the item.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p>
StartUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The location users are directed to after they've authenticated. For a connected app, this is the location specified by the StartUrl. Otherwise it's the application's default start page.</p>

Field Name	Details
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of application represented by this item. The types are:</p> <ul style="list-style-type: none"> <li>• ConnectedApplication</li> <li>• Network</li> <li>• ServiceProvider</li> <li>• TabSet</li> </ul>
UserSortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The index value that represents where the user set this item in the menu (or App Launcher). For example, an item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p> <p>This value is separate from sortOrder so you can create logic incorporating both values. For example, if you want the user-sorted items to appear first, followed by the organization order for the rest, use:</p> <pre>SELECT ApplicationId,SortOrder,UserSortOrder FROM AppMenuItem order by userSortOrder NULLS LAST, sortOrder NULLS LAST</pre>

## Usage

See the AppMenuItem object for the organization-wide default settings This object contains the fields the requesting user has permission to see.

## UserAuthCertificate

Represents a user authentication certificate in your org. A user certificate is a unique PEM-encoded X.509 digital certificate to authenticate individual users to your org. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

This object is only available in orgs configured with My Domain and with `Let users authenticate with a certificate` enabled in Identity Verification. Only users with the Manage Internal Users permission can access this object.

## Fields

Field	Details
CertificateChain	<p><b>Type</b> base64</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The uploaded PEM files can contain a single certificate or up to 10 certificates in a certificate chain. Uploaded PEM files cannot be larger than 1 MB.</p>
CertificateChainLength	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The auto-generated length of the certificate or certificate chain in the uploaded PEM file.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, Salesforce generates one for each record, which slows performance.</p>
ExpirationDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The expiration date of the uploaded certificate.</p>

Field	Details
Fingerprint	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The unique fingerprint of the uploaded certificate.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The language in which to display the certificate. Possible values are:</p> <ul style="list-style-type: none"> <li>• da (Danish)</li> <li>• de (German)</li> <li>• en_US (English)</li> <li>• es (Spanish)</li> <li>• es_MX (Spanish - Mexico)</li> <li>• fi (Finnish)</li> <li>• fr (French)</li> <li>• it (Italian)</li> <li>• ja (Japanese)</li> <li>• ko (Korean)</li> <li>• nl_NL (Dutch)</li> <li>• no (Norwegian)</li> <li>• pt_BR (Portuguese - Brazil)</li> <li>• ru (Russian)</li> <li>• sv (Swedish)</li> <li>• th (Thai)</li> <li>• zh_CN (Chinese - Simplified)</li> <li>• zh_TW (Chinese - Traditional)</li> </ul>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> A descriptive name for the certificate.</p>

Field	Details
SerialNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The serial number of the uploaded certificate.</p>
UserID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The user associated with the certificate.</p>

## UserConfigTransferButton

Represents the association between a Chat configuration and a live chat button. This association allows users associated with a specific configuration to transfer chats to a button queue.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field Name	Details
LiveChatButtonId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the live chat button that agents can transfer chats to.</p>
LiveChatUserConfigId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the <code>LiveChatButtonId</code>.</p>

## UserConfigTransferSkill

Represents the association between a Chat configuration and a skill. This association allows users associated with a specific configuration to transfer chats to agents who have that skill.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field Name	Details
<code>LiveChatUserConfigId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the <code>LiveChatButtonId</code>.</p>
<code>SkillId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the skill group that agents can transfer chats to.</p>

## UserCustomBadge

Represents a custom badge for a user. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
BadgeType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of badge. Valid values are:</p> <ul style="list-style-type: none"> <li>• Customer</li> <li>• Partner</li> <li>• Employee</li> </ul>
CustomText	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Custom text for the badge.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the community or org that the badge is in.</p>

## UserCustomBadgeLocalization

Represents the translated version of a custom badge for a user. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

### Special Access Rules

- Translation Workbench must be enabled for your org.
- Users with the “Customize Application” or “Manage Translation” permission can create or update UserCustomBadge translations.

## Fields

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The language the UserCustomBadge is translated into. This picklist contains these fully supported languages.</p> <ul style="list-style-type: none"> <li>• Chinese (Simplified): zh_CN</li> <li>• Chinese (Traditional): zh_TW</li> <li>• Danish: da</li> <li>• Dutch: nl_NL</li> <li>• English: en_US</li> <li>• Finnish: fi</li> <li>• French: fr</li> <li>• German: de</li> <li>• Italian: it</li> <li>• Japanese: ja</li> <li>• Korean: ko</li> <li>• Norwegian: no</li> <li>• Portuguese (Brazil): pt_BR</li> <li>• Russian: ru</li> <li>• Spanish: es</li> <li>• Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.</li> <li>• Swedish: sv</li> <li>• Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.</li> </ul>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b>namespacePrefix__componentName</b> notation. The namespace prefix can have one of the following values.</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the UserCustomBadge.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> The translated text for the UserCustomBadge. Label is <b>Translation Text</b>.</p>

## UserDevice

Represents information unique to a device. Available in API version 43.0 and later.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

You must have View Devices enabled to see devices.

### Fields

Field Name	Details
BrowserType	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The browser used for login.</p>
DeviceNativeUId	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Nillable, Sort</p> <p><b>Description</b> A unique string used to identify a mobile device.</p>
DeviceType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The device used to log in to Salesforce. The picklist options are:</p> <ul style="list-style-type: none"> <li>• Desktop</li> <li>• Tablet</li> <li>• iPad</li> <li>• iPhone</li> <li>• Phone</li> <li>• Unknown</li> </ul>
IsVerified	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Reserved for future use.</p>
LastLoginHistoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The most recent LoginHistory associated with the device.</p>
Name	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> This field is system-generated and cannot be changed.</p>
PlatformType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The operating system of the device. The picklist options are:</p> <ul style="list-style-type: none"><li>• iOS</li><li>• Android</li><li>• OSX</li><li>• Linux</li><li>• Phone</li><li>• Windows</li><li>• AppleApp</li><li>• Blackberry</li><li>• Other</li></ul>
PlatformVersion	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The version of the operating system running on the device.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The activity status of the device. The picklist options are:</p> <ul style="list-style-type: none"><li>• Active</li><li>• Revoked</li><li>• New</li></ul>
UserId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user.</p>
UserLastSeen	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time of the user's last access.</p>

## UserDeviceApplication

Represents information on applications installed on a device that is accessing Salesforce. Available in API version 43.0 and later.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Special Access Rules

You must have View Devices enabled to see devices.

### Fields

Field Name	Details
ApplicationType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The type of application used to log in to Salesforce.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p>

Field Name	Details
	<p><b>Description</b> This field is system-generated and cannot be changed.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The activity status of the device application. The picklist options are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Revoked</li> <li>• New</li> </ul>
UserDeviceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The unique identifier used to identify a device when tracking events. <code>UserDeviceId</code> is a generated value that's created when the mobile app is initially run after installation.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user.</p>

## UserEmailCalendarSync

---

Represents the user assignments of an Einstein Activity Capture configuration. This object is available in API version 49.0 and later.

### Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

## Fields

Field	Details
ConfigurationId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the Einstein Activity Capture configuration. The configuration is created in Salesforce Setup. After the configuration is created, the autogenerated ID is visible on the Configurations tab. From Setup, in the Quick Find box, enter <i>Einstein Activity Capture</i>, and then select <b>Settings</b>. Click the Configurations tab.</p>
UserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the user. Only Einstein Activity users can be added to a configuration.</p>

## Usage

Use UserEmailCalendarSync to add and remove users to an Einstein Activity Capture configuration.

This example adds two users to an Einstein Activity Capture configuration.

```
// Create a list of UserEmailCalendarSync records
List<UserEmailCalendarSync> usersToAdd = new ArrayList<>();

// Populate the UserEmailCalendarSync record with the ID of
// the user, and with the ID of the Activity Capture configuration you are adding them to
UserEmailCalendarSync user1 = new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxx',
    UserId = '005xxxxxxxxxxxxx');

UserEmailCalendarSync user2= new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxx',
    UserId = '005xxxxxxxxxxxxx');

// add the UserEmailCalendarSync users to your list
usersToAdd.add(user1);
usersToAdd.add(user2);

// Insert the list of UserEmailCalendarSync into the database
Database.SaveResult[] results = Database.insertImmediate(usersToAdd);
```

This example removes a user from an Einstein Activity Capture configuration.

To remove a user, call `UserEmailCalendarSync()`, passing in `null` for `ConfigurationId`.

```
UserEmailCalendarSync user2Remove= new
UserEmailCalendarSync(ConfigId = "", UserId = '005xxxxxxxxxxxxx');
Database.SaveResult results =Database.insertImmediate(user2Remove);
```

## UserEmailPreferredPerson

---

Represents a mapping for a user's preferred record for an email address when multiple records match an email field. This object is available in API version 44.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Fields

Field	Details
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. The unique email the mapping applies to. This field is unique for each user.</p>
Name	<p><b>Type</b> stringString</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Read-only. Auto-generated field.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The userId that owns the record. Each record is only accessible to the owner.</p>
PersonRecordId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Required. The recordId of a contact, lead, or user that represents the preferred record for the email address. Use cascade delete for contact and lead, and delete if the personId is a deactivated user record.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### UserEmailPreferredPersonShare

Sharing is available for the object.

## UserEmailPreferredPersonShare

Represents a sharing entry on a UserEmailPreferredPerson object. Sharing is not customizable for UserEmailPreferredPerson records. This object is available in API version 44.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. The level of access allowed. Values can be:</p> <ul style="list-style-type: none"> <li>All</li> <li>Edit</li> <li>Read</li> </ul>
ParentId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Sort,</p> <p><b>Description</b> Id of the parent record, if any.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort,</p> <p><b>Description</b> Required. Reason that the sharing entry exists. Valid values can include:</p> <ul style="list-style-type: none"> <li>• <code>Manual</code>—The user or group has access because a user with All access manually shared the channel program member record with them.</li> <li>• <code>Owner</code>—The user is the owner of the channel program record or is in a role above the channel program member record owner in the role hierarchy.</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort,</p> <p><b>Description</b> Required. ID of the user or group that has been given access to the <code>UserEmailPreferredPerson</code> record. The <code>UserOrGroupId</code> is polymorphic. The label is <code>User/Group Id</code>.</p>

## UserLicense

Represents a user license in your organization. A user license entitles a user to specific functionality and determines the profiles and permission sets available to the user.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field	Details
LicenseDefinitionKey	<p><b>Type</b> string</p>

## Field

## Details

**Properties**

Filter, Group, Sort

**Description**

A string that uniquely identifies a particular user license. Label is `License Def. ID`. Values are:

**AUL**: corresponds to the Salesforce Platform user license

**AUL1**: corresponds to the Salesforce Platform One user license

**AUL\_LIGHT** corresponds to the Salesforce Platform Light user license

**FDC\_ONE** corresponds to the Lightning Platform - One App user license

**FDC\_SUB** corresponds to the Lightning Platform App Subscription user license

**Overage\_Platform\_Portal\_User** corresponds to the Overage Authenticated Website user license

**PID\_STRATEGIC\_PRM**: corresponds to the Gold Partner user license

**PID\_CHATTER** corresponds to the Chatter Only user license

**PID\_CONTENT** corresponds to the Content Only user license

**PID\_Customer\_Portal\_Basic**: corresponds to the Customer Portal Manager Standard user license and the Customer Portal User license

**PID\_Customer\_Portal\_Standard**: corresponds to the Customer Portal Manager Custom user license

**PID\_FDC\_FREE** corresponds to the Lightning Platform Free user license

**PID\_IDEAS** corresponds to the Ideas Only user license

**PID\_Ideas\_Only\_Portal** corresponds to the Ideas Only Portal user license

**PID\_Ideas\_Only\_Site** corresponds to the Ideas Only Site user license

**PID\_KNOWLEDGE** corresponds to the Knowledge Only user license

**PID\_Customer\_Community** corresponds to the Customer Community license.

**PID\_Customer\_Community\_Login** corresponds to the Customer Community Login license.

**PID\_Partner\_Community** corresponds to the Partner Community license.

**PID\_Partner\_Community\_Login** corresponds to the Partner Community Login license.

**PID\_Limited\_Customer\_Portal\_Basic**: corresponds to the Limited Customer Portal Manager Standard user license

**PID\_Limited\_Customer\_Portal\_Standard**: corresponds to the Limited Customer Portal Manager Custom user license

**PID\_Overage\_Customer\_Portal\_Basic**: corresponds to the Overage Customer Portal Manager Standard user license

**PID\_Overage\_High Volume Customer Portal** corresponds to the Overage High Volume Customer Portal user license

**Platform\_Portal\_User**: corresponds to the Authenticated Website user license

Field	Details
	<p><b>POWER_PRM:</b> corresponds to the Partner user license</p> <p><b>POWER_SSP:</b> corresponds to the Customer Portal Manager user license</p> <p><b>SFDC:</b> corresponds to the Full CRM user license</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The user license label.  This field is available in API version 32.0 and later.</p>
MonthlyLoginsEntitlement	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The maximum number of customer or partner portal logins allowed per month. A <code>null</code> value in this field means the user license is charged according to the number of users rather than the number of logins.  This field is available in API version 20.0 and later.</p>
MonthlyLoginsUsed	<p><b>Type</b> int</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The number of successful logins for all users associated with a customer or partner portal user license. This field has a non-<code>null</code> value if <code>MonthlyLoginsEntitlement</code> has a non-<code>null</code> value.  This field is available in API version 20.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The internal name of the user license.</p> <p> <b>Note:</b> Your organization may also include custom user licenses.</p>

Field	Details
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The current status of the user license. Valid values for this field are <code>Active</code> and <code>Disabled</code>. This field is available in API version 32.0 and later.</p>
TotalLicenses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of user licenses in the organization. This field is available in API version 32.0 and later.</p>
UsedLicenses	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of user licenses that are assigned to active users in the organization. This field is available in API version 32.0 and later.</p>
UsedLicensesLastUpdated	<p><b>Type</b> dateTime</p> <p><b>Properties</b> aggregate, Filter, Sort</p> <p><b>Description</b> The timestamp of the query. If your license count exceeds your org's allotted threshold, the count timestamp reflects the previous day, otherwise the timestamp reflects the current day and time. This field is available in API version 41.0 and later.</p>

## Usage

Users with the "View Setup and Configuration" permission can use the UserLicense object to view the set of currently defined user licenses in your organization.

The UserLicense object is currently used by bulk user creation to determine the user license to which each profile and permission set belongs. For example, if you use the API to create portal users and you want to know which profile belongs to each portal user license, you can query this object for each profile and check the `LicenseDefinitionKey` to identify the associated user license.

[Profile](#)

## UserListView

---

Represents the customizations a user made to a list view. This object is available in API version 32.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Name	Details
LastViewedChart	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The last chart a user viewed.</p>
ListViewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the list view.</p>
SubjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The API name of the sObject for the user list view.</p>
UserId	<p><b>Type</b> reference</p>

Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user.</p>

## UserListViewCriterion

Represents the criterion for a user's customized list view. The criterion consists of the filters or sort order a user added to a list view for the Salesforce Mobile app. This object is available in API version 32.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Name	Details
ColumnName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the column in the user list view.</p>
Operation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The criteria to apply, such as "equals" or "starts with."</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The order in which the list view is evaluated compared to other UserListViewCriterion objects for the given UserListView.</p>

Name	Details
UserListViewId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user list view.</p>
Value	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The field values used to filter the list view. For example, a value of 94105 if the Field is <code>Billing Zip/Postal Code</code> shows only rows that have a billing ZIP code of 94105.</p>

## UserLogin

Represents the settings that affect a user's ability to log into an organization. To access this object, you need the `UserPermissions.ManageUsers` permission. This object is available in API version 29.0 and later.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
IsFrozen	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, the user account associated with this object is frozen.</p>
IsPasswordLocked	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>If <code>true</code>, the user account associated with this object is locked because of too many login failures. From the API, you can set this field to <code>false</code>, but not <code>true</code>.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>ID of the associated user account. This field can't be updated.</p>

## Usage

To query for all frozen users in your organization:

```
SELECT Id, UserId
FROM UserLogin
WHERE IsFrozen = true
```

## UserMembershipSharingRule

Represents the rules for sharing user records from a source group to a target group. A user record contains details about a user. Users who are members of the source group can be shared with members of the target group. The source and target groups can be based on roles, portal roles, public groups, or territories. This object is available in API version 26.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Sharing permission can edit this object.

## Fields

Field	Details
Description	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Rule Name</b> in the user interface.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>The ID representing the source group.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to <b>Label</b> on the user interface.</p>
UserAccessLevel	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>Edit</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID representing the target group being given access.</p>

## Usage

Use this object to manage sharing rules for user records. Source and target groups can include internal users, portal users, Chatter or Chatter External users.

## UserPackageLicense

Represents a license for an installed managed package, assigned to a specific user. This object is available in API version 31.0 and later.

## Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

## Fields

Field Name	Details
PackageLicenseId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The 18-character Globally Unique ID (GUID) that identifies the package license</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The User ID of the user licensed to use this package</p>

## Usage

Use this object, in conjunction with PackageLicense, to provide users access to a managed package installed in your organization.

## UserPermissionAccess

---

Represents the permissions accessibility for a current user. Available in API version 41.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field	Details
<code>LastCacheUpdate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The last modified date and time of either the user info or org info, whichever is later.</p>
<code>Permissions&lt;PermissionName&gt;</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> The name of the permission, such as <code>PermissionsActivateContract</code> or <code>PermissionsAuthorApex</code> and whether it's available to the user (<code>true</code>) or not (<code>false</code>).</p>

## Usage

API users without `PermissionsViewSetup` can use this object to check if their own sessions have access to a feature.

## UserPreference

---

Represents a functional preference for a specific user in your organization.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Customer Portal users can't access this object.

Only users with the View All Data or Manage Users permission can access UserPreference records of other users but all users can access their own UserPreference record.

**Note:** This behavior does not affect other types of user access such as Create or Edit.

## Fields

Field	Details
Preference	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The name of the user preference. Supported values are:</p> <ul style="list-style-type: none"> <li>• 57 (Event Reminder Default Lead Time)</li> <li>• 58 (Task Reminder Default Time)</li> <li>• 91 (Prevent Logs on Load)</li> <li>• 92 (Autocomplete Apex After Key Press)</li> <li>• 93 (Visualforce Viewstate Inspector)</li> <li>• 94 (Forecasting Displayed Type)</li> <li>• 96 (Editor Theme)</li> <li>• 97 (Editor Font Size)</li> <li>• 98 (Pinned Folders)</li> <li>• 99 (Enable Query Plan)</li> <li>• 100 (Enable New Open Dialog)</li> <li>• 101 (Email Transport Type)</li> <li>• 102 (Pinned Wave Folders)</li> <li>• 108 (Density)</li> </ul> <p>Event Reminder Default Lead Time and Task Reminder Default Time are related to these fields on the User object:</p> <ul style="list-style-type: none"> <li>• <code>UserPreferencesEventRemindersCheckboxDefault</code></li> <li>• <code>UserPreferencesTaskRemindersCheckboxDefault</code></li> <li>• <code>UserPreferencesSuppressEventSFXReminders</code></li> <li>• <code>UserPreferencesSuppressTaskSFXReminders</code></li> </ul> <p>Enable New Open Dialog is reserved for future use.</p> <p>When creating SOQL queries, <code>tolabel</code> is required to return accurate results. For example, <code>select Id, tolabel(Preference), Value, UserId from UserPreference.</code></p>

Field	Details
	108 (Density) is available in API v44.0 and later.
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user associated with this role. The corresponding field label is <b>User ID</b>. Admin users can create and edit preferences for other users. Standard users can delete their own preferences only. For a standard user, the value of the <code>UserId</code> field must be their own <code>UserId</code>.</p>
Value	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The value of the user preference. For <code>Event Reminder Default Lead Time</code>, the values are increasing intervals of time from 0 minutes to 2 days. For <code>Task Reminder Default Time</code>, the values are half-hours from 12:00 AM to 11:30 PM. To view the respective sets of values, access the Reminders in your personal settings in the online application.</p>

## Usage

Use this object to query the set of currently configured user preferences in your organization. In your client application, you can query the `User` object to obtain valid User IDs to access the `UserPreference` object.

All users can invoke the supported calls with this object. Standard users can invoke these calls, but only on their own preferences.

## UserProfile

Represents a Chatter user profile.

 **Note:** This object has been deprecated as of API version 32.0. Use the [User](#) object to query information about a user in API version 32.0 and later.

## Supported Calls

`describeLayout()`, `query()`, `retrieve()`

## Special Access Rules

- Information in hidden fields in a user's profile is not searchable by external users (with a portal profile) in a community. For example, if a user in a community has a hidden email address and an external user searches for it, the user record is not returned in the search results. Hidden field values are also not returned when external users perform searches on non-hidden fields. So if an external user searches for a user's name (can't be hidden), any hidden field values associated with the user record (for example, a hidden email address) are not returned in the search results.

Internal users from your organization who belong to the same community, however, can both search for and view hidden field values in search results.

- Any fields that have been restricted in visibility will be returned empty, whether or not they are, and will not be removed from the field listing.

## Fields

Field	Details
AboutMe	<p><b>Type</b> textarea</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Information about the user, such as areas of interest or skills.</p>
Address (beta)	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address. Read-only. See <a href="#">Address Compound Fields</a> for details on compound address fields.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The city associated with the user profile.</p>
CompanyName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The company associated with the user profile.</p>

Field	Details
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The country associated with the user profile.</p>
Email	<p><b>Type</b> email</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The email address associated with the user profile.</p>
Fax	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The fax number associated with the user profile.</p>
FirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user's first name.</p>
FullPhotoUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The URL for the user's profile photo if Chatter is enabled.  The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.</p>
IsActive	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the user has access to log in (<code>true</code>) or not (<code>false</code>). You can modify a User's active status from the user interface or via the API.</p>
IsBadged	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the user is visually badged (<code>true</code>) or not (<code>false</code>). Users of the same Chatter user type (internal, external) are badged. Different user types are not badged.</p>
LastName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The user's last name.</p>
Latitude (beta)	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <math>-90</math> and <math>90</math> up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>
Longitude (beta)	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <math>-180</math> and <math>180</math> up to 15 decimal places. For details on geolocation compound fields, see <a href="#">Compound Field Considerations and Limitations</a>.</p>

Field	Details
ManagerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user who manages this user.</p>
MobilePhone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user's mobile or cellular phone number.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> Concatenation of <code>FirstName</code> and <code>LastName</code>.</p>
Phone	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user's phone number.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user's postal or ZIP code. Label is <b>Zip/Postal Code</b>.</p>
SmallPhotoUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The URL for a thumbnail of the user's profile photo if Chatter is enabled.</p> <p>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo.</p>
State	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The state associated with the user profile.</p>
Street	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The street address associated with the user profile.</p>
Title	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The user's business title, such as "Vice President."</p>
UserPreferencesActivityRemindersPopup	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Filter</p> <p><b>Description</b></p> <p>When <code>true</code>, a reminder popup window automatically opens when an activity reminder is due. Corresponds to the <code>Trigger alert when reminder comes due</code> checkbox at the Reminders page in the personal settings in the user interface.</p>
UserPreferencesApexPagesDeveloperMode	<p><b>Type</b></p> <p>boolean</p>

Field	Details
	<p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, indicates that the user has enabled developer mode for editing Visualforce pages and controllers.</p>
UserPreferencesDisableAllFeedsEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email for all updates to Chatter feeds, based on the types of feed emails and digests the user has enabled.</p>
UserPreferencesDisableBookmarkEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone comments on a Chatter feed item after the user has bookmarked it.</p>
UserPreferencesDisableChangeCommentEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone comments on a change the user has made, such as an update to their profile.</p>
UserPreferencesDisableEndorsementEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the member automatically receives email every time someone endorses them for a topic.</p>

Field	Details
UserPreferencesDisableFeedbackEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives emails related to WDC feedback. This includes when someone requests or offers feedback, shares feedback with the user, or reminds the user to answer a feedback request.</p>
UserPreferencesDisableFileShareNotificationsForApi	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, email notifications are sent from the person who has shared a file to the users with whom the file has been shared.</p>
UserPreferencesDisableFollowersEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone starts following the user in Chatter.</p>
UserPreferencesDisableLaterCommentEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone comments on a feed item after the user has commented on the feed item.</p>
UserPreferencesDisableLikeEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone likes a post or comment the user has made.</p>

Field	Details
UserPreferencesDisableMentionsPostEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time the user is mentioned in posts.</p>
UserPreferencesDisableMessageEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email for Chatter messages sent to the user.</p>
UserPreferencesDisableProfilePostEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone posts to the user's profile.</p>
UserPreferencesDisableRewardEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives emails related to WDC rewards. This includes when someone someone gives a reward to the user.</p>
UserPreferencesDisableSharePostEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time the user's post is shared.</p>

Field	Details
UserPreferencesDisableWorkEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user receives emails related to WDC feedback, goals, and coaching. The user must also sign up for individual emails listed on the WDC email settings page. When <code>true</code>, the user will not receive any emails related to WDC feedback, goals, or coaching even if they are signed up for individual emails.</p>
UserPreferencesDisCommentAfterLikeEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone comments on a post the user has liked.</p>
UserPreferencesDisMentionsCommentEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time the user is mentioned in comments.</p>
UserPreferencesDisProfPostCommentEmail	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>false</code>, the user automatically receives email every time someone comments on posts on the user's profile.</p>
UserPreferencesEnableAutoSubForFeeds	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, the user automatically subscribes to feeds for any objects that the user creates.</p>

Field	Details
UserPreferencesEventRemindersCheckboxDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, a reminder popup is automatically set on the user's events. Corresponds to the <code>By default, set reminder on Events to...</code> checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>
UserPreferencesHideChatterOnboardingSplash	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, the initial Chatter onboarding prompts do not appear.</p>
UserPreferencesHideCSNDesktopTask	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Desktop.</p>
UserPreferencesHideCSNGetChatterMobileTask	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Mobile.</p>
UserPreferencesHideS1BrowserUI	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Controls the interface that the user sees when logging in to Salesforce from a supported mobile browser. If <code>false</code>, the user is automatically redirected to the Salesforce mobile web. If <code>true</code>, the user sees the</p>

Field	Details
	<p>full Salesforce site. The default value is <code>false</code>. Label is <b>Salesforce User</b>.</p> <p>This field is available in API version 29.0 or later.</p>
<code>UserPreferencesHideSecondChatterOnboardingSplash</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, the secondary Chatter onboarding prompts do not appear.</p>
<code>UserPreferencesReminderSoundOff</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, a sound automatically plays when an activity reminder is due. Corresponds to the <code>Play a reminder sound</code> checkbox on the Reminders page in the user interface.</p>
<code>UserPreferencesShowCityToExternalUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the city field in the user's contact information. City is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul> <p>City is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowCityToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>

Field	Details
UserPreferencesShowCityToGuestUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the city field in the user's contact information. When <code>true</code>, city is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value #N/A.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowCityToExternalUsers</code>, making the user's city visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
UserPreferencesShowCountryToExternalUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the country field in the user's contact information. Country is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value #N/A.</li> </ul> <p>Country is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowCountryToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowCountryToGuestUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p>

## Field

## Details

**Description**

Indicates the visibility of the country field in the user's contact information. When `true`, country is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowCountryToExternalUsers`, making the user's country visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

---

`UserPreferencesShowEmailToExternalUsers`

**Type**

boolean

**Properties**

Filter

**Description**

Indicates the visibility of the email address field in the user's contact information. Email address is visible only to internal members of the user's organization when this field is `false`. Email address is visible to external members in a community when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses.

When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

---

`UserPreferencesShowFaxToExternalUsers`

**Type**

boolean

**Properties**

Filter

**Description**

Indicates the visibility of the fax number field in the user's contact information. Fax number is visible only to internal members of the user's organization when this field is `false`. Fax number is visible to external members in a community when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses.

When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

---

`UserPreferencesShowManagerToExternalUsers`

**Type**

boolean

Field	Details
	<p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the manager field in the user's contact information. Manager is visible only to internal members of the user's organization when this field is <code>false</code>. Manager is visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowMobilePhoneToExternalUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the mobile or cellular phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is <code>false</code>. The number is visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowPostalCodeToExternalUsers	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the postal or ZIP code field in the user's contact information. Postal code is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul> <p>Postal code is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowPostalCodeToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p>

Field	Details
	<p>The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<p><code>UserPreferencesShowPostalCodeToGuestUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the postal or ZIP code field in the user's contact information. When <code>true</code>, postal code is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowPostalCodeToExternalUsers</code>, making the user's postal code visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<p><code>UserPreferencesShowProfilePicToGuestUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the user's profile photo. When <code>true</code>, the photo is visible to guest users in a community. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community.</p> <p>When <code>false</code>, this field returns the stock photo. The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<p><code>UserPreferencesShowStateToExternalUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the state field in the user's contact information. State is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>• This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul>

Field	Details
	<p>State is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>• This field is <code>true</code>, or</li> <li>• This field is <code>false</code> but <code>UserPreferencesShowStateToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<p><code>UserPreferencesShowStateToGuestUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the state field in the user's contact information. When <code>true</code>, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowStateToExternalUsers</code>, making the user's state visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<p><code>UserPreferencesShowStreetAddressToExternalUsers</code></p>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is <code>false</code>. The address is visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<p><code>UserPreferencesShowTitleToExternalUsers</code></p>	<p><b>Type</b> boolean</p>

## Field

## Details

Field	Details
	<p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> <li>This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>.</li> </ul> <p>Title is visible to external members in a community when:</p> <ul style="list-style-type: none"> <li>This field is <code>true</code>, or</li> <li>This field is <code>false</code> but <code>UserPreferencesShowTitleToGuestUsers</code> is <code>true</code>, which overrides this field's value.</li> </ul> <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>The default value is <code>true</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowTitleToGuestUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the business title field in the user's contact information. When <code>true</code>, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Communities, via the Guest User license associated with each site or community. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowTitleToExternalUsers</code>, making the user's title visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<code>UserPreferencesShowWorkPhoneToExternalUsers</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is <code>false</code>. The number is</p>

Field	Details
	<p>visible to external members in a community when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesTaskRemindersCheckboxDefault</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter</p> <p><b>Description</b> When <code>true</code>, a reminder popup is automatically set on the user's tasks. Corresponds to the <code>By default, set reminder on Tasks to...</code> checkbox on the Reminders page in the user interface. This field is related to <code>UserPreference</code> and customizing activity reminders.</p>

## Usage

Use this object to query Chatter—related information about the user. While the `User` object contains all the information about a user and is historically tied to user management, `UserProfile` is a read-only entity that contains the information that is relevant in a Chatter context.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [UserProfileFeed](#) (API version 18.0–26.0)

Feed tracking is available for the object.

## UserProvAccount

Represents information that links a Salesforce user account with an account in a third-party (target) system, such as Google, for users of connected apps with Salesforce user provisioning enabled. This object is available in API version 33.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field	Details
ConnectedAppId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The 15 character application ID.</p>
DeletedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time when the associated user account in the target system was deleted. This value is automatically updated during the provisioning and reconciling processes.</p>
ExternalEmail	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The email address as stored in the target system for the associated user account.</p>
ExternalFirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The first name as stored in the target system for the associated user account.</p>
ExternalLastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last name as stored in the target system for the associated user account.</p>
ExternalUserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>The unique identifier for the user as stored in the target system.</p>
ExternalUsername	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The username as stored in the target system for the associated user account.</p>
IsKnownLink	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Setting the <code>IsKnownLink</code> value to <code>true</code> implies the administrator or another user is managing the relationship between the Salesforce user account and the third-party user account, manually. This field helps Salesforce coordinate updates between the <code>UserProvAccountStaging</code> object and the <code>UserProvAccount</code> object while committing staged accounts. Typically, for a matching user account (the same <code>ExternalUserId</code> for both objects), Salesforce copies the values from the <code>UserProvAccountStaging</code> object to the <code>UserProvAccount</code> object.</p> <p>However, if Salesforce encounters a <code>UserProvAccountStaging</code> object with a matching <code>ExternalUserId</code> but different <code>LinkState</code> and <code>SalesforceUserId</code> values during this process, Salesforce checks the <code>UserProvAccount</code> <code>IsKnownLink</code> value. If the <code>IsKnownLink</code> value is <code>true</code>, Salesforce doesn't copy the <code>LinkState</code> and <code>SalesforceUserId</code> values from the <code>UserProvAccountStaging</code> object to the <code>UserProvAccount</code> object (all other values are copied).</p> <p>The default is <code>false</code>, meaning Salesforce manages the account relationship.</p>
LinkState	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The state of the current connection between the user account in the Salesforce organization and the associated user account in the target system. The valid values are:</p> <ul style="list-style-type: none"> <li>• <code>linked</code>— changes to the account in the Salesforce organization are queued to be updated for the associated user account in the target system.</li> <li>• <code>duplicate</code>— an associated account in the target system exists.</li> <li>• <code>orphaned</code>—no associated account exists in the target system.</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li><code>ignored</code>— changes to the account in the Salesforce organization have no effect on the associated user account in the target system.</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique name for this object.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update</p> <p><b>Description</b> The user ID of the owner of this object—typically a Salesforce administrator.</p>
SalesforceUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The user ID for the user account in the Salesforce organization that is associated with the user account in the target system.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The status of the account in the target system. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Deactivated</li> <li>Deleted</li> </ul>

## UserProvAccountStaging

Temporarily stores user account information while a user completes the User Provisioning Wizard. This information that is stored in the UserProvAccount object when you click the button to collect and analyze accounts on the target system.

User provisioning links a Salesforce user account with an account in a third-party (target) system. To configure user provisioning, you use a User Provisioning Wizard that guides you through the setup process. As you enter values about account details in the wizard, these values are stored in this object until you click the button to collect and analyze accounts on the target system. The general user provisioning configuration details are stored in the UserProvisioningConfig object.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
ConnectedAppId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The 15 character connected app ID.</p>
ExternalEmail	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The email address as stored in the target system for the associated user account.</p>
ExternalFirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The first name as stored in the target system for the associated user account.</p>
ExternalLastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last name as stored in the target system for the associated user account.</p>

Field Name	Details
ExternalUserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> The unique identifier for the user as stored in the target system.</p>
ExternalUsername	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The username as stored in the target system for the associated user account.</p>
LinkState	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The state of the current connection between the user account in the Salesforce organization and the associated user account in the target system. The valid values are:</p> <ul style="list-style-type: none"> <li>• <code>linked</code>— a user account matches one in the target system.</li> <li>• <code>duplicate</code>— an associated account in the target system exists.</li> <li>• <code>orphaned</code>—no associated account exists in the target system.</li> <li>• <code>ignored</code>— changes to the account in the Salesforce organization have no effect on the associated user account in the target system.</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique name for this object.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The user ID of the owner of this object—typically a Salesforce administrator.</p>
SalesforceUserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The user ID for the user account in the Salesforce organization that is associated with the user account in the target system.</p>
Status	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The status of the account in the target system. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Deactivated</li> <li>• Deleted</li> </ul>

## Usage

When committing fields from a `UserProvAccountStaging` to a `UserProvAccount` object, Salesforce looks up the `UserProvAccount` record where `UserProvAccountStaging.ExternalUserId = UserProvAccount.ExternalUserId`.

- If an `ExternalUserId` doesn't match an existing account, Salesforce creates a `UserProvAccount` record based on the `UserProvAccountStaging` record.
- If an `ExternalUserId` matches, then Salesforce checks the `UserProvAccount.isKnownLink` value, and does the following.
  - If `UserProvAccount.IsKnownLink = true`, Salesforce copies the `UserProvAccountStaging` values to the `UserProvAccount` object, except for the `ExternalUserId` and `LinkState` values.
  - If `UserProvAccount.IsKnownLink = false`, Salesforce copies all of the `UserProvAccountStaging` values to the `UserProvAccount` object.

## UserProvMockTarget

Represents an entity for testing user data before committing the data to a third-party system for user provisioning.

During the user provisioning process, user account information is sent to a third-party system to create, update or delete a user account on that system. While configuring user provisioning for your organization using a flow or Apex action, you can use this object to confirm

the associated flow or Apex code is sending the desired data. After confirming the correct fields and values, you can update the flow or Apex action to send the data to the target system.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
ExternalEmail	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The email address as stored in the target system for the associated user account.</p>
ExternalFirstName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The first name as stored in the target system for the associated user account.</p>
ExternalLastName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The last name as stored in the target system for the associated user account.</p>
ExternalUserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> The unique identifier for the user as stored in the target system.</p>
ExternalUsername	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The username as stored in the target system for the associated user account.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The unique name for this object.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The user ID of the owner of this object—typically a Salesforce administrator.</p>

## UserProvisioningConfig

Represents information for a flow to use during a user provisioning request process, such as the attributes for an update. This object is available in API version 34.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Fields

Field Name	Details
ApprovalRequired	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Denotes whether approvals are required for provisioning users for the associated connected app. If the value is null, no approval is required.</p>

Field Name	Details
ConnectedAppId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The 18-digit application ID for the connected app.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization.</p>
Enabled	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether user provisioning is enabled for the associated connected app (<code>true</code>) or not (<code>false</code>).</p>
EnabledOperations	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Lists the operations, as comma-separated values, that create a <code>UserProvisioningRequest</code> object for the associated connected app. Allowed values are:</p> <ul style="list-style-type: none"><li>• <code>Create</code></li><li>• <code>Update</code></li><li>• <code>EnableAndDisable</code> (activation and deactivation)</li><li>• <code>SuspendAndRestore</code> (freeze and unfreeze)</li></ul>

Field Name	Details
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.</p>
LastReconDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date and time when user accounts were last reconciled between Salesforce and the target system.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The master label for this object. This value is the internal label that doesn't get translated.</p>
NamedCredentialId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce ID of the named credential that's used for a request. The named credential identifies the third-party system and the third-party authentication settings.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15</p>

Field Name	Details
	<p>characters. You can refer to a component in a managed package by using the <b><code>namespacePrefix__componentName</code></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul>
Notes	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A utility field for administrators to add any additional information about the configuration. This field is for internal reference only, and is not used by any process.</p>
OnUpdateAttributes	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Lists the user attributes, as comma-separated values, that generate a <code>UserProvisioningRequest</code> object during an update.</p>
ReconFilter	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> When collecting and analyzing users on a third-party system, the plug-in uses this filter to limit the scope of the collection.</p>
UserAccountMapping	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Stores the attributes used to link the Salesforce user to the account on the third-party system, in JSON format.</p> <p>For example:</p> <pre> {"linkingSalesforceUserAttribute": "Username", "linkingTargetUserAttribute": "Email"} </pre>

## UserProvisioningLog

Represents messages generated during the process of provisioning users for third-party applications. This object is available in API version 33.0 and later.

Some messages for this object are generated automatically by Salesforce, and others are created by the developers of the user provisioning plugin. Developers can use this object to log messages from the flow associated with the user provisioning process or the Apex plugin that calls the target system. Administrators can use this object as a log of all user provisioning activity and as a troubleshooting tool if desired behavior is missing. This object is available as a custom report type.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
Details	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The value of this field depends on the log entry. For example, if the target system returns an error, the error message may be recorded in this field.</p>
ExternalUserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique identifier for the user in the target system.</p>

Field	Details
ExternalUsername	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The username set in the target system for the associated user account.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique name for this object.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce ID of the Group or User who owns this object.</p>
Status	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the user provisioning request. Based on the context of the log, it can contain different values, such as an HttpStatusCode.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce ID of the user making the request.</p>
UserProvisioningRequestId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>A unique identifier for the user provisioning request.</p>

## UserProvisioningRequest

Represents an individual provisioning request to create, update, or delete a single user account in a third-party service system (or another Salesforce organization). This object is available in API version 33.0 and later.

A UserProvisioningRequest (UPR) record is created for each provisioning action for each user, and for each connected app available to the user. For example, if a user has two connected apps, and a provisioning request is sent to two different services to create an account for the user, Salesforce creates two UPR objects. Provisioning actions include creating, updating, or deleting a user account.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
AppName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The unique name of the connected app associated with the service provider.</p>
ApprovalStatus	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The status of the approval for the current request. If the user provisioning setup for the connected app does not have an approval process enabled, the status is <code>Not Required</code>. If an approval process is enabled, supported values are:</p> <ul style="list-style-type: none"> <li>• <code>Required</code>— An approval process is enabled in the user provisioning setup for the associated connected app, but there is no response to the request yet.</li> <li>• <code>Not Required</code>— An approval process is not enabled in the user provisioning setup for the associated connected app.</li> <li>• <code>Approved</code></li> <li>• <code>Denied</code></li> </ul>

Field	Details
ConnectedAppId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The 18-digit application ID for the connected app.</p>
ExternalUserId	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique identifier for the user in the target system.</p>
ManagerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce ID of the user who manages the user specified in the <code>SalesforceUserId</code> field. If an approval process is configured for the user provisioning request, this value allows the manager to approve the request. Available in API version 34.0 and later.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The unique name for this object.</p>
Operation	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The Apex method called by the trigger associated with the provisioning request (typically a change to the User object). Supported values are:</p> <ul style="list-style-type: none"><li>• Create</li><li>• Read</li><li>• Update</li><li>• Deactivate</li></ul>

Field	Details
	<ul style="list-style-type: none"> <li>• Activate</li> <li>• Freeze</li> <li>• Unfreeze</li> <li>• Reconcile</li> <li>• Linking</li> </ul> <p>For example, when the User object field <code>isActive</code> is set to <code>false</code>, the UPR object <code>Operation</code> field value is set to <code>Deactivate</code>.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce ID of the Group or User who owns this object.</p>
ParentID	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> When a retry event is created, the failed UPR is cloned and resubmitted. This field contains a lookup to the failed UPR that was cloned to create the current record.</p>
Retry Count	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Number of retry attempts performed on a UPR. Retry Count enables custom business logic such as "Retry 5 times then stop and notify your admin."</p>
SalesforceUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce ID of the user making the request.</p>
ScheduleDate	<p><b>Type</b> dateTime</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> When to send this request to the service provider.</p> <p> <b>Note:</b> Scheduling is not implemented yet. Currently, provisioning changes are queued immediately to be sent to the service provider.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Status of this request. Supported values are:</p> <ul style="list-style-type: none"> <li>• New</li> <li>• Requested</li> <li>• Completed</li> <li>• Failed</li> <li>• Collecting</li> <li>• Collected</li> <li>• Analyzing</li> <li>• Analyzed</li> <li>• Committing</li> <li>• Retried</li> <li>• Manually Completed</li> </ul> <p>The State goes from <code>New</code> to <code>Requested</code> to <code>Completed</code> or <code>Failed</code>, unless a reconciliation process is occurring. For details about the reconciliation process <code>State</code> value changes, see <a href="#">Usage</a>.</p> <p>The State goes from <code>Failed</code> to <code>Retried</code> or <code>Manually Completed</code> when troubleshooting UPR failures. For details about handling failures, see <a href="#">State Values for Managing Provisioning Failures</a>.</p>
UserProvAccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID value of the associated UserProvAccount object.</p>
UserProvConfigId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID value of the associated UserProvisioningConfig object. Available in API version 34.0 and later.</p>

## Usage

The `State` value changes during a reconciliation process (`Operation = Reconcile`) to gather and compare users on the third-party system to Salesforce users. Typically, when a UPR entry is first created, it has a `State` value of `New`. When a collection process is triggered, the `State` transitions to `Collecting` until that process is finished and the `State` is `Collected`. When an analyze process is triggered, the `State` transitions to `Analyzing` until that process is finished and the `State` is `Analyzed`. If a process commits the request, the `State` then transitions to `Committing`, and the properties move from the `UserProvAccountStaging` object to the `UserProvAccount` object. When those properties are saved in the `UserProvAccount` object, the `State` transitions to `Completed`.

However, the `State` does not necessarily start at `New`. For example, `UserProvAccountStaging` entries can be inserted programmatically. If a process is initiated that triggers linking these rows to accounts on the third-party service, a UPR entry could start with the `Analyzing` `State`.

Also, the `State` cannot go backwards from an active task. For example, a successful `Analyzing` `State` must progress to `Analyzed`; unless the active process fails, and then the `State` must change to `Failed`. Certain `State` transitions cannot be made programmatically and must be triggered by Salesforce.

The following table shows the `State` transitions that can occur for each `State` value. Each row corresponds to a current `State` value and each column corresponds to a new `State` after a potential transition.

-  — the transition to this value is not allowed.
-  — the transition to this value is allowed.
-  — only Salesforce can transition the `State` to this value.

	New	Requested	Collecting	Collected	Analyzing	Analyzed	Committing	Completed	Failed	Retried	Manually Completed

Retried	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘
Manually Completed	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘

## State Values for Managing Provisioning Failures

The `state` value changes to `Failed` for several reasons, such as network outages, session timeouts, permissions issues, and record locks. The `Failed` state can transition to either `Retried` or `Manually Completed` to indicate what action was taken to address the failure. Actions can include correcting the root cause of the failure and requesting that the provisioning engine retry the UPR. Or, it can be completing the action against the target manually. Each UPR is an independent transaction and it's possible the retry causes a failure with a different root cause. So it's hard to distinguish failed events that you addressed from the ones that require more action.

If you tried to correct the cause of the failure and requested the provisioning engine to retry the UPR, you can mark the failed UPR `Retried`. Or, if the action against the target was completed manually, you can mark it `Manually Completed`.

When a retry event is created, the failed UPR is cloned, and resubmitted. The `ParentID` field contains a lookup to the failed UPR to use to clone the new UPR. The `Retry Count` field contains the number of retry attempts that were performed on a UPR. With the `Retry Count` field, you can add custom business logic like "Retry 5 times then stop and notify your admin."

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [UserProvisioningRequestOwnerSharingRule](#) (API version 34.0)

Sharing rules are available for the object.

### [UserProvisioningRequestShare](#) (API version 34.0)

Sharing is available for the object.

## UserRecordAccess

---

Represents a user's access to a set of records. This object is read only and is available in API version 24.0 and later.

## Supported Calls

`describeSObjects()`, `query()`

## Fields

Field	Details
HasAllAccess	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a user can share the record.</p>
HasDeleteAccess	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a user has delete access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasEditAccess	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a user has edit access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasTransferAccess	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a user has transfer access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasReadAccess	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether a user has read access to the record (<code>true</code>) or not (<code>false</code>).</p>
MaxAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates a user's maximum level of access to a record.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Read</li> <li>• Edit</li> <li>• Delete</li> <li>• Transfer</li> <li>• All</li> </ul>
RecordId	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>ID of the record.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group</p> <p><b>Description</b></p> <p>ID of the user.</p>

## Usage

Use this object to query a user's access to records. You can't create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

The following sample query returns the records, whether the queried user has read and transfer access to each record, and the user's maximum access level to each record.

```
SELECT RecordId, HasReadAccess, HasTransferAccess, MaxAccessLevel
FROM UserRecordAccess
WHERE UserId = [single ID]
AND RecordId = [single ID] //or Record IN [list of IDs]
```

The following query returns the records to which a queried user has read access.

```
SELECT RecordId
FROM UserRecordAccess
WHERE UserId = [single ID]
AND RecordId = [single ID] //or Record IN [list of IDs]
AND HasReadAccess = true
```

Using API version 30.0 and later, `UserRecordAccess` is a foreign key on the records. You can't filter by or provide the `UserId` or `RecordId` fields when using this object as a lookup or foreign key. The previous sample queries can be run as:

```
SELECT Id, Name, UserRecordAccess.HasReadAccess, UserRecordAccess.HasTransferAccess,
       UserRecordAccess.MaxAccessLevel
FROM Account
```

```
SELECT Id, Name, UserRecordAccess.HasReadAccess
FROM Account
```

SOQL restrictions:

- When the running user is querying a user's access to a set of records, records that the running user does not have read access to are filtered out of the results.
- When filtering by `UserId` and `RecordId` only, you must use `SELECT RecordId` and optionally one or more of the access level fields: `HasReadAccess`, `HasEditAccess`, `HasDeleteAccess`, `HasTransferAccess`, and `HasAllAccess`. You may include `MaxAccessLevel`.
- When filtering by `UserId`, `RecordId`, and an access level field, you must use `SELECT RecordId` only.

## UserRole

---

Represents a user role in your organization.

 **Note:** This object was called "Role" in previous versions of the API documentation.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only users with the View Roles and Role Hierarchy permission can access this object, and only users with the Manage Roles permission can edit this object.

## Fields

Field	Details
<code>CaseAccessForAccountOwner</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The case access level for the account owner.</p>

Field	Details
ContactAccessForAccountOwner	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The contact access level for the account owner.</p> <p> <b>Note:</b> When DefaultContactAccess is set to Controlled by Parent, you can't create or update this field.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to <b>Role Name</b> in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
ForecastUserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the forecast manager associated with this role. Label is <b>User ID</b>.</p>
IsPartner	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether the user role is a partner who has access to the partner portal (<code>true</code>) or not (<code>false</code>). This field is not available for release 9.0 and later. Instead, use <code>PortalType</code> with the value <code>Partner</code>.</p>
<code>MayForecastManagerShare</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b></p> <p>Indicates whether the forecast manager can manually share their own forecast.</p>
<code>Name</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. Name of the role. Corresponds to <b>Label</b> on the user interface.</p>
<code>OpportunityAccessForAccountOwner</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>Required. The opportunity access level for the account owner. Note that you can't set a user role with an opportunity access less than that specified in organization-wide defaults.</p>
<code>ParentRoleId</code>	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the parent role.</p>
<code>PortalRole</code>	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Nillable</p> <p><b>Description</b></p> <p>The portal role: Executive, Manager, User, or PersonAccount.</p>

Field	Details
PortalType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> This value indicates the type of portal for the role:</p> <ul style="list-style-type: none"> <li>• None: Salesforce application role.</li> <li>• CustomerPortal: Customer portal role.</li> <li>• Partner: partner portal role. The field <code>IsPartner</code> used in release 8.0 will map to this value.</li> </ul> <p>This field replaces <code>IsPartner</code> beginning with release 9.0.</p>
RollupDescription	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Description of the forecast rollup. Label is <b>Description</b>.</p>

## Usage

Use this object to query the set of currently configured user roles in your organization. Use it in your client application to obtain valid UserRole IDs to use when querying or modifying a User record.

Users with the View Roles and Role Hierarchy permission can query or describe this object. If your client application logs in with the “Manage Users” permission, it can query, create, update, or delete UserRole records.

 **Note:** You can't update any field for a portal role.

For example, the following code finds all roles that are not assigned to any users.

```
SELECT Id, Name, DeveloperName
FROM UserRole
WHERE Id NOT IN (SELECT UserRoleId
                 FROM User
                 WHERE UserRoleId != '0000000000000000')
```

SEE ALSO:

[Object Basics](#)

## UserServicePresence

Represents a presence user's real-time presence status. This object is available in API version 32.0 and later.

## Supported Calls

`delete()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`

## Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

## Fields

Field	Details
ConfiguredCapacity	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The user's total configured capacity.</p>
IsAway	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the user's status is <i>Away</i>.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> An automatically generated ID number that identifies the record.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the owner of the <code>UserServicePresence</code> entity. For external routing, allows the entity to be used in the Streaming API to listen to events whenever a <code>UserServicePresence</code> record is created, modified, or deleted.</p>
ServicePresenceStatusId	<p><b>Type</b> reference</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the presence status that's associated with the presence user that's specified by the <code>UserId</code>.</p>
<code>UserId</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the Omni-Channel user.</p>

## Usage

Apex triggers aren't supported with `UserServicePresence`.

Sharing rules aren't supported with `UserServicePresence` even if the `OwnerId` field is enabled.

In API version 41.0 or later, `UserServicePresence` records can be deleted programmatically. The "Customize Application" permission is required.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [UserServicePresenceOwnerSharingRule](#)

Sharing rules are available for the object.

### [UserServicePresenceShare](#)

Sharing is available for the object.

## UserShare

Represents a sharing entry on a user record. This object is available in API version 26.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

As of Summer '20 and later, only standard users or users with the Customize Application permission can access this object.

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Read-only. Indicates whether the User has access to log in (<code>true</code>) or not (<code>false</code>). You can modify a User's active status from the user interface or via the API.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists. You can only write to this field when its value is either omitted or set to <code>Manual</code> (default).  You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.  Possible values include:</p> <ul style="list-style-type: none"> <li>• <code>Manual</code>—The User or Group has access to the user record because a User with "All" access manually shared the User with them.</li> <li>• <code>Rule</code>—The User or Group has access to the user record via a User sharing rule.</li> </ul>
UserAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the User or Group has to the specified user. The specified user is denoted by the <code>UserId</code>. The possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Read</code></li> <li>• <code>Edit</code></li> </ul> <p>This field must be set to an access level that is at least equal to the organization's default <code>UserAccessLevel</code>.  <code>UserAccessLevel</code> can be updated only if <code>RowCause</code> is set to <code>Manual Sharing</code>.</p>

Field	Details
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the User being shared.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the User or Group that has been given access to the User. This field can't be updated.</p>

## Usage

This object allows you to determine which users and groups can view or edit User records owned by other users.

## UserTeamMember

Represents a single User on the default opportunity team of another User.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

- This object is available only in organizations that have enabled the team selling functionality.
- Customer Portal users can't access this object.

## Fields

Field	Details
OpportunityAccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Restricted picklist, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Required. Level of access that the team member has to opportunities for which the user has added his or her default opportunity team. The possible values are:</p> <ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for opportunities.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter</p> <p><b>Description</b></p> <p>Required. ID of the User who owns the default opportunity team. This field can't be updated.</p>
TeamMemberRole	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Update</p> <p><b>Description</b></p> <p>Role that the team member has on opportunities for which the User has added his or her default opportunity team. The valid values are set by the organization's administrator in the Opportunity Team Roles picklist. Label is <b>Team Role</b>.</p>
UserId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter</p> <p><b>Description</b></p> <p>Required. ID of the User who is a member of the default opportunity team. This field can't be updated.</p>

## Usage

If you attempt to create a record that matches an existing record, the create request updates any modified fields and returns the existing record.

Users can set up their default opportunity team to include other users that typically work with them on opportunities.

SEE ALSO:

[OpportunityTeamMember](#)

# UserTerritory

---

Represents a User who has been assigned to a Territory.

 **Note:** The original territory management feature is scheduled for retirement for all customers as of Summer '21. After the feature is retired, users can't access the original territory management feature and its underlying data. We encourage you to migrate to Enterprise Territory Management. We also strongly recommend that you keep a comprehensive backup of your territory data while you're still using the original territory management feature. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

- Only available if territory management has been enabled for your organization.
- As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Territories permission can edit this object.

## Fields

Field	Details
<code>IsActive</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the user is active in the given territory (<code>true</code>), or inactive in the given territory (<code>false</code>):</p> <ul style="list-style-type: none"> <li>• Users who are active in a territory are explicitly assigned to the territory and can have open opportunities, closed opportunities, or no opportunities associated with that territory.</li> <li>• Users who are inactive in a territory are not explicitly assigned to the territory, but own an open or closed opportunity that is associated with the territory. For example, a user may have been transferred out of a territory, but still own opportunities in his or her old territory.</li> </ul> <p>Until a user is deleted from a territory (not simply removed from the territory), the record is not returned in a <code>getDeleted()</code> call.</p>
<code>IsDeleted</code>	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
TerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the Territory to which the user has been assigned. This field is required when creating a record in API version 20.0 and later.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter</p> <p><b>Description</b> ID of the user. This field is required when creating a record.</p>

## Usage

If a user is inactive in a territory, and the opportunities they own that are associated with the territory are all closed, the user is not returned in the Territories related list on the User page in Setup. Regardless of whether the user is inactive or the opportunities are closed, the user is returned in the Quotas related list.

SEE ALSO:

[Territory](#)

[AccountTerritoryAssignmentRule](#)

[AccountTerritoryAssignmentRuleItem](#)

## UserTerritory2Association

Represents an association (by assignment) between a territory and a user record. Available only if Enterprise Territory Management has been enabled for your organization.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

## Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

## Fields

Field Name	Details
<code>IsActive</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the user is active (<code>true</code>) or inactive (<code>false</code>) in the given territory.</p>
<code>RoleInTerritory2</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The role of the user in a territory. Possible values are: Owner, Administrator, Sales Rep. Label is <code>Role in Territory</code>.</p>
<code>Territory2Id</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the territory that the user is assigned to.</p>
<code>UserId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who is assigned to the territory.</p>

# UserWorkList

---

Represents a list of work items in the My Feed tab for High Velocity Sales users.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
<code>IsActive</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Whether the work list is active or not.</p>
<code>ListType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of list, such as a call or email.</p>
<code>Name</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the work list.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the list.</p>

## UserWorkListItem

---

Represents an individual work item in the My Feed tab for High Velocity Sales users.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field	Details
PriorityOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The order of the item in the list.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the related record.</p>
UserWorkListId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the related work list.</p>

## VerificationHistory

---

Represents the past six months of your org users' attempts to verify their identity. This object is available in API version 36.0 and later.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Only users with Manage Users permission can access this object.

### Fields

Field Name	Details
Activity	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The action the user attempted that requires identity verification. The label is User Activity. Available values are:</p> <ul style="list-style-type: none"> <li>• AccessReports—The user attempted to access reports or dashboards.</li> <li>• Apex—The user attempted to access a Salesforce resource with a verification Apex method.</li> <li>• ChangeEmail—The user attempted to change an email address.</li> <li>• ConnectToopher—The user attempted to connect Salesforce Authenticator.</li> <li>• ConnectTotp—The user attempted to connect a one-time password generator.</li> <li>• ConnectU2F—The user attempted to register a U2F security key.</li> <li>• ConnectedApp—The user attempted to access a connected app.</li> <li>• EnableLL—The user attempted to enroll in Lightning Login.</li> <li>• ExportPrintReports—The user attempted to export or print reports or dashboards.</li> <li>• ExtraVerification—Reserved for future use.</li> <li>• ListView—The user attempted to access a list view.</li> <li>• Login—The user attempted to log in.</li> <li>• Registration—Reserved for future use.</li> <li>• TempCode—The user attempted to generate a temporary verification code.</li> </ul>
EventGroup	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the verification attempt. Verification can involve several attempts and use different verification methods. For example, in a user's session, a user enters an invalid verification code (first attempt). The user then enters the correct code and successfully verifies identity (second attempt). Both attempts are part of a single verification and, therefore, have the same ID. The label is Verification Attempt.</p>

Field Name	Details
LoginGeoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful identity verification attempt. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) can vary.</p>
LoginHistoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID for the record of the user's successful or unsuccessful login attempt.</p>
Policy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The identity verification security policy or setting. The label is Triggered By. Available values are:</p> <ul style="list-style-type: none"> <li>• CustomApex—Identity verification made by a verification Apex method.</li> <li>• DeviceActivation—Identity verification required for users logging in from an unrecognized device or new IP address. This verification is part of Salesforce's risk-based authentication.</li> <li>• EnableLightningLogin—Identity verification required for users enrolling in Lightning Login. This verification is triggered when the user attempts to enroll. Users are eligible to enroll if they have the Lightning Login User user permission and the org has enabled Allow Lightning Login in Session Settings.</li> <li>• ExtraVerification—Reserved for future use.</li> <li>• HighAssurance—High assurance session required for resource access. This verification is triggered when the user tries to access a resource, such as a connected app, report, or dashboard that requires a high-assurance session level.</li> <li>• LightningLogin—Identity verification required for internal users logging in via Lightning Login. This verification is triggered when the enrolled user attempts to log in. Users are eligible to log in if they have the Lightning Login User user permission and have successfully enrolled in Lightning Login. Also, from Session Settings in Setup, Allow Lightning Login must be enabled.</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• PageAccess—Identity verification required for users attempting to perform an action, such as changing an email address or adding a two-factor authentication method.</li> <li>• PasswordlessLogin—Identity verification required for external users attempting to log in to a community that is set up for passwordless login. The admin controls which registered verification methods can be used, for example, email, SMS, Salesforce Authenticator, or TOTP.</li> <li>• ProfilePolicy—Session security level required at login. This verification is triggered by the Session security level required at login setting on the user’s profile.</li> <li>• TwoFactorAuthentication—Two-factor authentication required at login. This verification is triggered by the Two-Factor Authentication for User Interface Logins user permission assigned to a custom profile. Or the user permission is included in a permission set that is assigned to a user.</li> </ul>
Remarks	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The text the user sees on the page or in Salesforce Authenticator when prompted to verify identity. For example, if identity verification is required for a user’s login, the user sees “You’re trying to Log In to Salesforce.” In this case, the Remarks value is “Log In to Salesforce.” But if the Activity value is Apex, the Remarks value is a custom description passed by an Apex method. If the user is verifying identity using Salesforce Authenticator, the custom description also appears in the app. If the custom description isn’t specified, the value is the name of the Apex method. The label is Activity Message.</p>
ResourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> If the Activity value is ConnectedApp, the ResourceId value is the ID of the connected app. The label is Connected App ID.</p>
SourceIp	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The IP address of the machine from which the user attempted the action that requires identity verification. For example, the IP address of the machine from</p>

Field Name	Details
	<p>where the user tried to log in or access reports. If it's a non-login action that required verification, the IP address can be different from the address from where the user logged in. This address can be an IPv4 or IPv6 address.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The status of the identity verification attempt. Available values are:</p> <ul style="list-style-type: none"> <li>• AutomatedSuccess—Salesforce Authenticator approved the request for access because the request came from a trusted location. After users enable location services in Salesforce Authenticator, they can designate trusted locations. When a user trusts a location for a particular activity, such as logging in from a recognized device, that activity is approved from the trusted location for as long as the location is trusted.</li> <li>• Denied—The user denied the approval request in the authenticator app, such as Salesforce Authenticator.</li> <li>• FailedGeneralError—An error caused by something other than an invalid verification code, too many verification attempts, or authenticator app connectivity.</li> <li>• FailedInvalidCode—The user entered an invalid verification code.</li> <li>• FailedInvalidPassword—The user entered an invalid password.</li> <li>• FailedPasswordLockout—The user attempted to enter a password too many times.</li> <li>• FailedTooManyAttempts—The user attempted to verify identity too many times. For example, the user entered an invalid verification code repeatedly.</li> <li>• Initiated—Salesforce initiated identity verification but hasn't yet challenged the user.</li> <li>• InProgress—Salesforce challenged the user to verify identity and is waiting for the user to respond or for Salesforce Authenticator to send an automated response.</li> <li>• RecoverableError—Salesforce can't reach the authenticator app to verify identity, but it continues to retry.</li> <li>• ReportedDenied—The user denied the approval request in the authenticator app, such as Salesforce Authenticator, and also flagged the approval request to report to an administrator.</li> <li>• Succeeded—The user's identity was verified.</li> </ul>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b> ID of the user verifying identity.</p>
VerificationMethod	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The method by which the user attempted to verify identity in the verification event. The label is Method. Available values are:</p> <ul style="list-style-type: none"> <li>• Email—Salesforce sent an email with a verification code to the address associated with the user’s account.</li> <li>• EnableLL—Salesforce Authenticator sent a notification to the user’s mobile device to enroll in Lightning Login. This value is available in API version 38.0 and later.</li> <li>• LL—Salesforce Authenticator sent a notification to the user’s mobile device to approve login via Lightning Login. This value is available in API version 38.0 and later.</li> <li>• SalesforceAuthenticator—Salesforce Authenticator sent a notification to the user’s mobile device to verify account activity.</li> <li>• Sms—Salesforce sent a text message with a verification code to the user’s mobile device. SMS messaging requires a Salesforce add-on license for Identity Verification Credits.</li> <li>• TempCode—A Salesforce admin or a user with the Manage Two-Factor Authentication in User Interface permission generated a temporary verification code for the user. This value is available in API version 37.0 and later.</li> <li>• Totp—An authenticator app generated a time-based, one-time password (TOTP) on the user’s mobile device.</li> <li>• U2F—A U2F security key generated required credentials for the user. This value is available in API version 38.0 and later.</li> </ul>
VerificationTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The date and time of the identity verification attempt, for example, 7/19/2025, 3:19:13 PM PDT. The time zone is based on GMT. The label is Time.</p>

## Usage

Here are two examples of the types of API queries you can perform.

Query	String
Show verification history for a user's login record	<pre>SELECT Activity, EventGroup, Policy, Remarks, Status, UserId, VerificationMethod, VerificationTime FROM VerificationHistory WHERE LoginHistoryId = '0YaD000#####'</pre>
Get detailed geographic location information for a user's verification attempt	<pre>SELECT City, CountryIso, Latitude, Longitude, PostalCode FROM LoginGeo WHERE LoginGeoId = '0LE#####'</pre>

## VisualforceAccessMetrics

Represents summary statistics for Visualforce pages.

### Supported Calls

`count()`, `query()`, `retrieve()`

### Special Access Rules

As of Spring '20 and later, to access VisualforceAccessMetrics, users must have the Customize Application permission.

## Fields

Field	Details
ApexPageId	<p><b>Type</b> reference</p> <p><b>Properties</b> Aggregate, Filter, Group, Sort</p> <p><b>Description</b> The ID of the Visualforce page.</p>
ProfileId	<p><b>Type</b> reference</p> <p><b>Properties</b> Aggregate, Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who viewed the Visualforce page.</p>

Field	Details
DailyPageViewCount	<p><b>Type</b> integer</p> <p><b>Properties</b> Aggregate, Filter, Group, Sort</p> <p><b>Description</b> The number of views received by the specified Visualforce page.</p>
MetricsDate	<p><b>Type</b> date</p> <p><b>Properties</b> Aggregate, Filter, Group, Sort</p> <p><b>Description</b> The date the metrics are queried.</p>
LogDate	<p><b>Type</b> date</p> <p><b>Properties</b> Aggregate, Filter, Group, Sort</p> <p><b>Description</b> The most recent page access date.</p>

## Usage

Use this object to query information on the Visualforce pages in your org.

```
SELECT ApexPageId, DailyPageViewCount, Id, ProfileId, MetricsDate, LogDate FROM VisualforceAccessMetrics
```

## VoiceCall

Represents a Lightning Dialer phone call.

## Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

## Fields

Field Name	Details
ActivityId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the related activity.</p>
CallConnectDateTime	<p><b>Type</b> datetime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time and date when the call was connected.</p>
CallDisposition	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The status of a phone call, such as whether a phone call is in progress, busy, or failed.</p>
CallDurationInSeconds	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The total call duration in seconds.</p>
CallEndDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Sort</p> <p><b>Description</b> The time when a call ends.</p>
CallerIdType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The number displayed for outbound calls. The possible values are:</p> <ul style="list-style-type: none"> <li>• VendorLine</li> <li>• CompanyNumber</li> <li>• LocalPresence</li> <li>• CustomCallerId</li> </ul>
CallRecordingId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The ID of the related call recording.</p>
CallStartDateTime	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Sort</p> <p><b>Description</b></p> <p>The time when a call starts.</p>
CallType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>Whether a call is internal, inbound, outbound, part of a call bridge, or a transfer.</p>
ConferenceKey	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The related conference key. This field's only available if call monitoring is enabled.</p>
CurrencyCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The currency used to bill the call.</p>

Field Name	Details
FromPhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The phone number of the user who initiated the call.</p>
IsRecorded	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Whether a call is recorded (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed a record that is related to this VoiceCall.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this VoiceCall. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MediaProviderId	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related media provider.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The ID of the user who owns the phone number.</p>
Price	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The cost of the phone call.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the related record.</p>
ToPhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The recipient of the phone call.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Dialer user.</p>
VendorCallKey	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, idLookup, Sort</p> <p><b>Description</b> The ID of the child leg of the call that's provided by the Dialer vendor.</p>
VendorParentCallKey	<p><b>Type</b> string</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the parent leg of the call that's provided by the Dialer vendor.</p>
VendorType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Whether the vendor is Twilio, a custom vendor, or a contact center.</p>
VoiceVendorLineId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the associated Dialer vendor line.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### VoiceCallOwnerSharingRule

Sharing rules are available for the object.

### VoiceCallShare

Sharing is available for the object.

## VoiceCallList

Represents a prioritized list of numbers to call.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Whether the call list is active or not.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the call list.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the call list owner.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### VoiceCallListOwnerSharingRule

Sharing rules are available for the object.

### VoiceCallListShare

Sharing is available for the object.

## VoiceCallListItem

Represents a single phone number in a prioritized call list.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`,  
`retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
CallListId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the related call list.</p>
Ordinal	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The order of the item in the overall call list.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the related record.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Whether the call list item is not called, called, or skipped.</p>

## VoiceCallQualityFeedback

Represents feedback given by a Lightning Dialer user about the quality of a VoiceCall.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
FeedbackText	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The detailed feedback about a call left by a user.</p>
FeedbackType	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The feedback category (Call could not connect, Audio lagged, etc.) selected by a user.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user leaving the feedback.</p>
VoiceCallId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the related VoiceCall.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [VoiceCallQualityFeedbackOwnerSharingRule](#)

Sharing rules are available for the object.

### [VoiceCallQualityFeedbackShare](#)

Sharing is available for the object.

# VoiceCallRecording

---

Represents a Lightning Dialer call recording. Call recordings are saved as files in Salesforce.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
DurationInSeconds	<b>Type</b> int <b>Properties</b> Filter, Group, Sort <b>Description</b> The total call duration in seconds.
IntelligenceScore	<b>Type</b> int <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The intelligence score of the recording.
IsConsented	<b>Type</b> boolean <b>Properties</b> Create, Filter, Group, Sort, Update <b>Description</b> Whether the call recording was indicated as consented or not.
MediaContentId	<b>Type</b> reference <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> The ID of the related media content, a ContentDocument. The record counts toward your org's file storage quota.
Name	<b>Type</b> string

Field Name	Details
	<p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the call recording file.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the owner of the call recording.</p>
UploadDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time and date that the recording was uploaded.</p>
VoiceCallId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the related phone call.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [VoiceCallRecordingOwnerSharingRule](#)

Sharing rules are available for the object.

### [VoiceCallRecordingShare](#)

Sharing is available for the object.

## VoiceCoaching

Represents a call that is using call monitoring.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the manager monitoring the call.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the call list owner.</p>
TraineeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort, Unique</p> <p><b>Description</b> The ID of the call list owner.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [VoiceCoachingOwnerSharingRule](#)

Sharing rules are available for the object.

### [VoiceCoachingShare](#)

Sharing is available for the object.

## VoiceLocalPresenceNumber

Represents a phone number with the same area code as the person who's being called.

## Supported Calls

`query()`, `retrieve()`

## Fields

Field Name	Details
CountryCode	<b>Type</b> string <b>Properties</b> Filter, Group, idLookup, Sort <b>Description</b> The country code of the phone number.
LastUsedDate	<b>Type</b> dateTime <b>Properties</b> Filter, Nillable, Sort <b>Description</b> The date the phone number was last used.
PhoneNumber	<b>Type</b> phone <b>Properties</b> Filter, Group, Sort <b>Description</b> The local presence phone number.
Prefix	<b>Type</b> reference <b>Properties</b> Filter, Group, Sort <b>Description</b> The area code of the phone number.

## VoiceMailContent

---

Represents a voicemail message left by a caller to the context user.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field Name	Details
DurationInSeconds	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The duration of the voicemail message in seconds.</p>
FirstHeardDateTime	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time and date when the user first listened to the voicemail message.</p>
MediaContentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the related media content, a ContentDocument. The record counts toward your org's file storage quota.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the voicemail message.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner of the voicemail message.</p>
VoiceCallId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The ID of the related Dialer call.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### VoiceMailContentOwnerSharingRule

Sharing rules are available for the object.

### VoiceMailContentShare

Sharing is available for the object.

## VoiceMailGreeting

Represents a custom greeting message that plays upon reaching a user's voicemail. This object is available in API version 41.0 and later.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
<code>DurationInSeconds</code>	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The duration of the voicemail greeting message in seconds.</p>
<code>IsDefault</code>	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Whether the greeting is the user's default greeting (<code>true</code>) or not (<code>false</code>).</p>
<code>MediaContentId</code>	<p><b>Type</b></p> <p>reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the related content document.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the voicemail greeting message.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the voicemail greeting message owner.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [VoiceMailGreetingOwnerSharingRule](#)

Sharing rules are available for the object.

### [VoiceMailGreetingShare](#)

Sharing is available for the object.

## VoiceMailMessage

Represents a prerecorded voicemail message.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
DurationInSeconds	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The duration of a prerecorded voicemail message in seconds.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Specifies whether the message is the context user's default voicemail drop message.</p>
MediaContentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the file.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the prerecorded voicemail message.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The owner of the prerecorded voicemail message.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**VoiceMailMessageOwnerSharingRule**

Sharing rules are available for the object.

**VoiceMailMessageShare**

Sharing is available for the object.

## VoiceUserLine

---

Represents a user's forwarding phone number.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
<code>IsCustomCallerId</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the number is a custom caller ID (<code>true</code>) or not (<code>false</code>).</p>
<code>IsVerified</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Reserved for future use.</p>
<code>Name</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> The name of the phone number.</p>
<code>OwnerId</code>	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user who owns the phone number.</p>
PhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The user's phone number.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the user using the phone number.</p>
VendorVerifiedCallerIdKey	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p><b>Description</b> The ID for a custom phone number provided by the Lightning Dialer service provider.</p>
VoiceVendorInfoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the related Lightning Dialer service provider.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [VoiceUserLineOwnerSharingRule](#)

Sharing rules are available for the object.

**VoiceUserLineShare**

Sharing is available for the object.

## VoiceUserPreferences

---

Represents the number the user displays when making outbound calls. This object is available in API version 41.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Fields

Field Name	Details
CallerIdType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The number displayed for outbound calls. The possible values are:</p> <ul style="list-style-type: none"> <li>• VendorLine</li> <li>• CompanyNumber</li> <li>• LocalPresence</li> <li>• CustomCallerId</li> </ul>
DeskPhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A separate phone number users can utilize as part of a call bridge.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the phone number owner.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### VoiceUserPreferencesOwnerSharingRule

Sharing rules are available for the object.

### VoiceUserPreferencesShare

Sharing is available for the object.

## VoiceVendorInfo

---

Represents information about the Lightning Dialer provider's vendor.

## Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Fields

Field Name	Details
CorporateNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The standard number that users can choose to display when making outgoing calls.</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Specifies whether the vendor is active or not.</p>
LocalPresenceDefaultNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The default routing number that's available for incoming local presence calls.</p>

Field Name	Details
VendorAccountKey	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The account key of the vendor.</p>
VendorProviderName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The name of the vendor.</p>
VendorType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The type of vendor.</p>

## VoiceVendorLine

---

Represents a user's phone number reserved with the vendor.

### Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

### Fields

Field Name	Details
CallUsageInSecondsLastMonth	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> An org's total call usage last month in seconds.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the user who owns the phone number.</p>
PhoneNumber	<p><b>Type</b> phone</p> <p><b>Properties</b> Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The unique vendor phone number.</p>
ShouldRecord	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Reserved for future use.</p>
Status	<p><b>Type</b> boolean</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether the number is currently active or released.</p>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user using the phone number.</p>
VoiceVendorInfoId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The ID of the Dialer vendor.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### VoiceVendorLineOwnerSharingRule

Sharing rules are available for the object.

### VoiceVendorLineShare

Sharing is available for the object.

## Vote

---

Represents a vote that a user has made on an Idea or a Reply.

**Note:** In API version 16.0 and earlier, SOQL queries on the Vote object only return votes for the Idea object. Starting in API version 17.0, SOQL queries return votes for both Idea and Reply.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

Field	Details
IsDeleted	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter</p> <p><b>Description</b> Indicates whether the object has been moved to the Recycle Bin (true) or not (false). Label is <b>Deleted</b>.</p>
LastModifiedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user most recently associated with this vote.</p>
LastModifiedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Defaulted on create, Filter, Sort</p>

Field	Details
	<p><b>Description</b> The datetime when this vote was last modified.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Sort, Create, Filter</p> <p><b>Description</b> ID of the Idea or Reply associated with this vote.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Group, Sort, Create, Filter, Restricted picklist, Update</p> <p><b>Description</b> Picklist that indicates the type of vote. The value <code>Up</code> indicates that the vote is a user's positive endorsement of the associated idea or reply. The value <code>Down</code> indicates that the vote is a user's negative endorsement of the associated idea or reply.</p>

 **Note:** If you are importing Vote data into Salesforce and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

## Usage

In version 12.0 and later, use this object to track the votes that users made on ideas. For more information on ideas, see “Understand and Work with Ideas” in the Salesforce online help.

In version 17.0 and later, you must filter using the following syntax when querying this object in a SOQL query: `ParentId = single ID`, `Parent.Type = single type`, `Id = single ID`, or `Id IN (list of IDs)`. See [Comparison Operators in the Salesforce SOQL and SOSL Reference Guide](#) for a sample query.

A SOQL query must filter using one of the following Parent or Id clauses.

- `ParentId = [single ID]`
- `Parent.Type = [single type]`
- `Id = [single ID]`
- `Id IN = [list of IDs]`

## WaveAutoInstallRequest

---

Provides access the concrete object that represents an Analytics auto install request. The auto install request tracks the progress of Analytics applications created from Analytics templates by the automated process user. This object is available in API version 38.0 and later.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

Einstein Analytics must be enabled in your org. A user must have the Auto Install permission enabled.

### Fields

Field	Details
Configuration	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable</p> <p><b>Description</b> Analytics application configuration for the auto install request.</p>
FailedReason	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> If the Analytics application fails to complete successfully, this value is the reason why the failure occurred. Values can be <code>OrganizationIncompatible</code>, <code>RetriesExhausted</code>, <code>RequestCancelled</code>, <code>AppCreateFailure</code>, <code>AppUpdateFailure</code>, <code>AppConstructionFailure</code>, <code>WaveDisabled</code>, <code>CancelFailed</code>, <code>DeleteFailed</code>, <code>DependencyFailure</code>, <code>DependencyCancelled</code>, <code>FailedToEnqueue</code>, and <code>FailedOther</code></p>
FolderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the Analytics application created by the auto install request.</p>

Field	Details
IsLocked	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if the auto install request is locked or not.</p>
MayEdit	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates if the auto install request can be edited or not</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the auto install request, provided at creation by the user.</p>
RequestLog	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A log of the auto install progress and completion results.</p>
RequestStatus	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of the auto install request. Values can be <i>New</i>, <i>Enqueued</i>, <i>Cancelled</i>, <i>In Progress</i>, <i>AppInProgress</i>, <i>Failed</i>, and <i>Success</i>.</p>
RequestType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>The type of auto install request. Values can be <code>WaveEnable</code>, <code>OrgCompatibilityCheck</code>, <code>WaveAppCreate</code>, <code>WaveAppUpdate</code>, <code>WaveAppDelete</code>, and <code>StartDataflow</code>.</p>
<code>TemplateApiName</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The API name of the Analytics template to create the Analytics app from.</p>
<code>TemplateVersion</code>	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The version of the Analytics template to create the Analytics app from.</p>

## Usage

Use this object to query and create auto install requests for Analytics applications in your org. This object is useful to troubleshoot issues with templated applications that are created by the automated process user.

## WebCart

Represents an online shopping cart in a store built with B2B Commerce on Lightning, with total amounts for products, shipping and handling, and taxes. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The WebCart object is available only if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the account that owns this WebCart.</p>
BillingAddress	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The address to which to bill this webCart.</p>
BillingCity	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city of the billing address.</p>
BillingCountry	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country of the billing address.</p>
BillingGeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The accuracy rating of the geocode for the billing address. Possible values are:</p> <ul style="list-style-type: none"> <li>• Address</li> <li>• Block</li> <li>• City</li> <li>• County</li> <li>• ExtendedZip</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>NearAddress</li> <li>Neighborhood</li> <li>State</li> <li>Street</li> <li>Unknown</li> <li>Zip</li> </ul>
BillingLatitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The latitude of the geocode for the billing address.</p>
BillingLongitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The longitude of the geocode for the billing address.</p>
BillingPostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code for the billing address.</p>
BillingState	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state of the billing address.</p>
BillingStreet	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street of the billing address. Enter up to 255 characters.</p>

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are:</p> <ul style="list-style-type: none"> <li>• EUR—Euro</li> <li>• USD—U.S. Dollar</li> </ul>
GrandTotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Sum of all cart items' TotalAmount, or WebCart TotalAmount plus WebCart TotalTaxAmount.</p>
IsRepricingNeeded	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Whether the cart has changed since the last repricing. The default value is false.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort,</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastRepricingDate	<p><b>Type</b> datetime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date when the last repricing was done.</p>
Name	<p><b>Type</b> string</p>

Field	Details
	<p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of this webCart record. Name can be up to 255 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the owner of this webCart.</p>
PaymentGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the webCart payment group.</p>
PaymentMethodId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The method of payment for this webCart.</p>
PoNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The purchase order number. Enter up to 80 characters.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The status of this webCart. Possible values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Checkout</li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• Closed</li> <li>• Processing</li> <li>• </li> </ul>
TotalAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all cart items' TotalPrice, or TotalProductAmount plus TotalChargeAmount.</p>
TotalChargeAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all cart items' TotalPrice for cart items of the type Charge.</p>
TotalChargeTaxAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all the cart items' TotalTaxAmount for cart items of the type Charge.</p>
TotalListAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> Sum of all the cart items' TotalListPrice.</p>
TotalProductAmount	<p><b>Type</b> currency</p> <p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all the cart items' TotalPrice for cart items of the type Product.</p>
TotalProductCount	<p><b>Type</b> double</p>

Field	Details
	<p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> A count of all the products in the <code>WebCart</code>.</p>
<code>TotalProductTaxAmount</code>	<p><b>Type</b> currency</p> <p><b>Properties</b> Defaulted on create, Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all the cart items' <code>TotalTaxAmount</code> for the <code>CartItem</code> type <code>Product</code>.</p>
<code>TotalTaxAmount</code>	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The sum of all cart items' <code>TotalTaxAmount</code>, or <code>TotalProductTaxAmount</code> plus <code>TotalDeliveryTaxAmount</code>.</p>
<code>Type</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The <code>WebCart</code> type. Default value is <code>Cart</code>. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Cart</code></li> </ul>
<code>UniqueProductCount</code>	<p><b>Type</b> int</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The count of unique product SKUs in the <code>WebCart</code>.</p>
<code>WebStoreId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The store ID related to this <code>WebCart</code>.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WebCartHistory](#) on page 2745

History is available for tracked fields of the object.

### [WebCartOwnerSharingRule](#) on page 2882

Sharing rules are available for the object.

### [WebCartShare](#) on page 2887

Sharing is available for the object.

## WebCartHistory

---

WebCartHistory represents the history of changes to the values in the fields of the `WebCart` object.

For specific version information, see the documentation for `WebCart`.

## Supported Calls

`describeSObjects()`, `query`, `replicate`, `retrieve()`

## Special Access Rules

For specific special access rules, if any, see the documentation for `WebCart`.

## Fields

Field Name	Details
<code>DataType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
<code>Field</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Name of the field that was changed.</p>
<code>NewValue</code>	<p><b>Type</b> anyType</p>

Field Name	Details
	<p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> New value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Old value of the field that was changed.</p>
WebCartId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The unique ID of the webCart.</p>

## WebLink

---

Represents a custom link to a URL or Scontrol.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

### Special Access Rules

- To create a custom link, the client application must be logged in with the “Customize Application” permission.
- Customer Portal users can’t access this object.

### Fields

Field Name	Details
Availability	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the custom link. Limit is 1,000 characters.</p>
DisplayType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Type of display: button, link, or mass-action button.</p>
EncodingKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. Encoding of parameters on the URL link.</p>
HasMenubar	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the popup window shows a menu bar (<code>true</code>) or not (<code>false</code>).</p>
HasScrollbars	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the popup window shows scroll bars (<code>true</code>) or not (<code>false</code>).</p>
HasToolbar	<p><b>Type</b> boolean</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the popup window shows browser toolbars (<code>true</code>) or not (<code>false</code>). Toolbars normally contain navigation buttons like Back, Forward, and Print.</p>
Height	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Height of the popup in pixels.</p>
IsProtected	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the object is protected (<code>true</code>) or not (<code>false</code>). Protected components that have been installed in other organizations can't be linked to or referenced by components created in the subscriber organization. A developer can easily delete a protected component contained in a managed package in a future release of the package without worrying about failing installations. However, once a component is marked as unprotected and is released globally, the developer can't delete it.</p>
IsResizable	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether users are allowed to resize the popup window (<code>true</code>) or not (<code>false</code>).</p>
LinkType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Required. Type of link (S-control or URL).</p>

Field Name	Details
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Master label for the link. Limit is 240 characters. This display value is the internal label that is not translated.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name to display on page.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> <li>• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</li> <li>• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.</li> </ul> <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
OpenType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Required. How the custom link opens when clicked in a browser—NewWindow, Sidebar, or NoSidebar.</p>
PageOrObjectType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Required. For standard objects, the name of the page on which to display the custom link. For custom objects, the name of the object.</p>
Position	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Location on the screen where the popup should open—TopLeft, FullScreen, or None.</p>
RequireRowSelection	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the custom link requires a row selection (<code>true</code>) or not (<code>false</code>).</p>
ScontrolId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> ID of the custom s-control object (Scontrol) to link to. Can include fields as tokens within the custom s-control object. Label is <b>Custom S-Control ID</b>.</p>
ShowsLocation	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates whether the popup window shows the browser's address bar containing the URL (<code>true</code>) or not (<code>false</code>).</p>
ShowsStatus	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Show the status bar at the bottom of the browser.</p>
Url	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>Required. URL of the page to link to. Can include fields as tokens within the URL. Limit: 1,024 KB.</p>
Width	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Width of the popup in pixels.</p>

## Usage

Use this object to programmatically manage custom links, which allow client applications to integrate data with external URLs, an organization's intranet, or other back-end office systems. A custom link can point to:

- An external URL, such as `www.google.com` or your company's intranet.
- A custom s-control, such as a Java applet or Active-X control.

Custom links can include fields as tokens within the URL or custom s-control.

SEE ALSO:

[Scontrol](#)

## WebLinkLocalization

---

Represents the translated value of the field label for a custom link to a URL or s-control when the Translation Workbench is enabled for your organization.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

### Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

### Fields

Field	Details
LanguageLocaleKey	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Nillable, Restricted picklist</p> <p><b>Description</b> This field is available in API version 16.0 and earlier. It is the same as the <code>Language</code> field.</p>
Language	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application. This picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> <li>• Chinese (Simplified): <code>zh_CN</code></li> <li>• Chinese (Traditional): <code>zh_TW</code></li> <li>• Danish: <code>da</code></li> <li>• Dutch: <code>n1_NL</code></li> <li>• English: <code>en_US</code></li> <li>• Finnish: <code>fi</code></li> </ul>

**Field****Details**

- French: `fr`
- German: `de`
- Italian: `it`
- Japanese: `ja`
- Korean: `ko`
- Norwegian: `no`
- Portuguese (Brazil): `pt_BR`
- Russian: `ru`
- Spanish: `es`
- Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: `sv`
- Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.

The following end-user only languages are available.

- Arabic: `ar`

## WebStore

Represents a B2B Commerce store. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the B2B Commerce license to create a store.

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Type of store that can be created. The default value is <code>B2B</code>.</p>

# WebStoreCatalog

---

Represents the collection of products associated with a store. This object is available in API version 49.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

## Fields

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Possible values are:</p> <ul style="list-style-type: none"> <li>• GBP— British Pound</li> <li>• USD— U.S. Dollar</li> </ul> <p>The default value is USD.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Name of the catalog.</p>
ProductCatalogId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the catalog, containing products.</p>
SalesStoreId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the store that the catalog is associated with. This field is unique within your org.</p>

## WebStorePricebook

---

Represents a store price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Special Access Rules

This object is available only if the B2B Commerce on Lightning Experience license is enabled.

### Fields

Field	Details
IsActive	<p><b>Type</b> boolean</p>

Field	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Determines whether the WebStorePricebook is active (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the store price book record.</p>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the price book assigned to the store.</p>
WebStoreId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the store assigned to the price book.</p>

## Usage

Use the `WebStorePricebook` object to assign price books to a store. When you assign a price book to a web store, any buyer who has access to the store can price products from the assigned price books. When a store or buyer has multiple price book assignments, including prices to the same product, the price is determined by the pricing strategy of the store.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WebStorePricebookFeed](#)

Feed tracking is available for this object.

## Wishlist (Beta)

---

Represents a buyer-created list of `WishlistItem` on page 2766s in a store built with B2B Commerce on Lightning. Available in API version 49.0 and later.

 **Note:** As a beta feature, Wishlist is a preview and isn't part of the "Services" under your master subscription agreement with Salesforce. Use lists at your sole discretion, and make your purchase decisions only on the basis of generally available products and features. Salesforce doesn't guarantee general availability of lists within any particular time frame or at all, and we can discontinue it at any time. This feature is for evaluation purposes only, not for production use. It's offered as is and isn't supported, and Salesforce has no liability for any harm or damage arising out of or in connection with it. All restrictions, Salesforce reservation of rights, obligations concerning the Services, and terms for related Non-Salesforce Applications and Content apply equally to your use of lists. You can provide feedback and suggestions for lists in the IdeaExchange/X group in the [Trailblazer Community B2B Wish List Beta Feedback](#).

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The `Wishlist` object is available only if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
<code>AccountId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the account that owns the <code>Wishlist</code>.</p>

Field	Details
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are:</p> <ul style="list-style-type: none"> <li>• EUR—Euro</li> <li>• USD—U.S. Dollar</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of this <code>wishlist</code> record. <code>Name</code> can be up to 255 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the user or group that owns the <code>wishlist</code>.</p>
WebStoreId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the <code>WebStore</code> related to this <code>wishlist</code>.</p>
WishlistProductCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The count of <code>wishlistItems</code> on this <code>wishlist</code>.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**WishlistOwnerSharingRule** on page 2882

Sharing rules are available for the object.

**WishlistShare** on page 2887

Sharing is available for the object.

SEE ALSO:

[WishlistItem \(Beta\)](#)

## WishlistItem (Beta)

---

Represents an item on a `Wishlist` in a store built with B2B Commerce on Lightning. Available in API version 49.0 and later.

 **Note:** As a beta feature, `WishlistItem` is a preview and isn't part of the "Services" under your master subscription agreement with Salesforce. Use lists at your sole discretion, and make your purchase decisions only on the basis of generally available products and features. Salesforce doesn't guarantee general availability of lists within any particular time frame or at all, and we can discontinue it at any time. This feature is for evaluation purposes only, not for production use. It's offered as is and isn't supported, and Salesforce has no liability for any harm or damage arising out of or in connection with it. All restrictions, Salesforce reservation of rights, obligations concerning the Services, and terms for related Non-Salesforce Applications and Content apply equally to your use of lists. You can provide feedback and suggestions for lists in the IdeaExchange/X group in the [Trailblazer Community B2B Wish List Beta Feedback](#).

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

The `WishlistItem` object is available only if the B2B Commerce on Lightning Experience license is enabled.

## Fields

Field	Details
<code>CurrencyIsoCode</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The ISO code for the currency that's specified on the buyer's account. Default value is <code>USD</code>. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>EUR</code>—Euro</li> <li>• <code>USD</code>—U.S. Dollar</li> </ul>

Field	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Name Field, Sort, Update</p> <p><b>Description</b> The name of this <code>wishlistItem</code> record. Name can be up to 255 characters.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the product represented by the <code>wishlistItem</code>.</p>
WishlistId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the parent <code>wishlist</code> of this <code>wishlistItem</code>.</p>

SEE ALSO:

[Wishlist \(Beta\)](#)

## WorkAccess

---

Used to grant or restrict user access to give badge definitions. Each badge definition record must have one `WorkAccess` record.

### Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

### Additional Considerations and Related Objects

`WorkAccess` is not available through Schema Builder and is not customizable. A `WorkAccess` record is **required** for users to **Give** `BadgeDefinitions`. If a `WorkAccess` record is not created, `BadgeDefinitions` will not be available to users.

The sharing of `WorkAccess` records is through `WorkAccessShare`. For each `WorkBadgeDefinition` record, you must create both a `WorkAccess` record (per `WorkBadgeDefinition`) and `WorkAccessShare` records for sharing to users or groups.

## Fields

Field Name	Details
AccessType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Define the type of Access given to user ("Give").</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce unique ID for owner of Access record.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce unique ID for BadgeDefinition record associated with this Access record.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkAccessOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkAccessShare](#)

Sharing is available for the object.

## WorkAccessShare

Used to control Givers of WorkBadgeDefinition records.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Additional Considerations and Related Objects

Related to [WorkAccess Object](#). WorkAccess is the parent of WorkAccessShare.

### Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> CRUD Access Level (picklist values: Read Only, Read/Write, Owner).</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID for WorkAccess record.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Owner or Manual sharing.  You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> User or Group ID for WorkAccess.</p>

# WorkBadge

---

Represents information about who the badge was given to and which badge was given. A WorkBadge record is created for each recipient of a WorkBadgeDefinition.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks. There can be multiple WorkBadge records tied to a single WorkThanks record.

## Fields

Field Name	Details
DefinitionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. Salesforce unique ID for the given WorkBadgeDefinition record given.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The description of the WorkBadgeDefinition.</p>
GiverId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the badge giver. Can't be the same as RecipientId.</p>
ImageUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The URL of the badge image.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed a record that is related to this WorkBadge.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this WorkBadge. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Message	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The message accompanying the thanks badge.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the <a href="#">community</a> that this WorkBadge is associated with. This field is available only if Salesforce Communities is enabled in your organization.</p>
RecipientId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Required. Salesforce unique ID for User who is the Recipient of Badge. Can't be the same as <code>GiverId</code></p>

Field Name	Details
RewardId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce unique ID for Reward given with badge (if Reward Badge)</p>
SourceId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Salesforce unique ID for Thanks record referenced to this badge.</p>

## WorkBadgeDefinition

Represents the attributes of a badge including the badge name, description, and image. Each WorkBadge record must have a lookup to a WorkBadgeDefinition since badge attributes (like badge name) are derived from the WorkBadgeDefinition object.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Additional Considerations and Related Objects

WorkBadgeDefinition has a field called `ImageUrl` that references a DocumentID. This is a required field for creating a Badge.

To grant "giver" access to a WorkBadgeDefinition, you must also create the [WorkAccess](#) (and the related WorkAccessShare records).

Each WorkBadgeDefinition has an `ImageUrl` field that must be populated with a DocumentID of the Document record containing the badge image.

### Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Required. Limit: 4000 characters. The description of the badge and what it means to receive this badge.</p>
GivenBadgeCount	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The number of badges given per user or across all users.</p> <p> <b>Note:</b> This field can't be added in a list view or referenced in a formula field.</p>
ImageUrl	<p><b>Type</b></p> <p>url</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Required. This is the badge image that will be displayed in the UI. Use DocumentID or ImageURL.</p>
IsActive	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Represents whether a WorkBadgeDefinition is active and available in the UI and API.</p>
IsCompanyWide	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Represents a special class of badges known as Company Badges. Company badges are visible to the entire company and visible in specific list view filters.</p> <p> <b>Note:</b> If this field is selected, everyone within the user's network will be able to give the badge automatically. If this field is not selected, people with sharing must be added to the badge's access list in order to give the badge.</p>

Field Name	Details
IsLimitPerUser	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the badge limit is per user (<code>true</code>) or across all users (<code>false</code>). The default value is <code>false</code>.</p>
IsRewardBadge	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the badge is a reward badge (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed a record that is related to this WorkBadgeDefinition.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this WorkBadgeDefinition. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
LimitNumber	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The badge limit per user or across all users.</p>
LimitStartDate	<p><b>Type</b> date</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The start date of the badge limit. The date can be reset to the current date.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Required. Name of the Badge. <b>Label:</b> Badge Title.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the <a href="#">community</a> that this WorkBadgeDefinition is associated with. This field is available only if Salesforce Communities is enabled in your organization.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce User ID for User who is the Owner of the WorkBadgeDefinition record (usually the creator of the record)</p>
RewardFundId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce unique ID for the WorkRewardFund that is associated with this WorkBadgeDefinition. WorkBadgeDefinition records with a RewardFundID indicate a Reward Badge.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**WorkBadgeDefinitionFeed**

Feed tracking is available for the object.

**WorkBadgeDefinitionHistory**

History is available for tracked fields of the object.

**WorkBadgeDefinitionOwnerSharingRule**

Sharing rules are available for the object.

**WorkBadgeDefinitionShare**

Sharing is available for the object.

## WorkCoaching

---

Represents a single coaching relationship between two users. One of the users is defined as the coach and the other is defined as a coachee. WorkCoaching is feed-enabled so there is a private feed available to the coach and coachee.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
CoachId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> [Required] The coach in this 1:1 coaching relationship.</p>
CoachedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> [Required] The user being coached in this 1:1 coaching relationship.</p>
IsInactive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Indicates whether the coaching relationship is <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed a record that is related to this coaching relationship.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this coaching relationship. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> [Required] The record's name. Max length is 255 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the contact who owns the WorkCoaching record.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### WorkCoachingFeed

Feed tracking is available for the object.

**WorkCoachingHistory**

History is available for tracked fields of the object.

**WorkCoachingOwnerSharingRule**

Sharing rules are available for the object.

**WorkCoachingShare**

Sharing is available for the object.

## WorkFeedback

---

Represents the answer to a question that a person was asked via a feedback request. Also used to store offered feedback without linking it to a particular question.

### Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Additional Considerations and Related Objects

- Ownership is transferred to the requester on submit for certain types (ad-hoc feedback).
- The record is read-only after the request that it's linked to is set to Submitted.
- You can't link a feedback object to a request unless you are the recipient.
- The question that the feedback is linked to must be part of the same question set that the request is linked to.

### Fields

Field Name	Details
Feedback	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Contains either the free-form text of the answer, or the choice selected by the user. Max length is 65536.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The name of the WorkFeedback record.</p>

Field Name	Details
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the WorkFeedback record.</p>
QuestionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The question this answer applies to. When this feedback is linked to a request of an unsolicited type, the question ID is null.</p>
RequestId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The ID of the request this response belongs to, in case of offered feedback.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkFeedbackHistory](#)

History is available for tracked fields of the object.

### [WorkFeedbackOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkFeedbackShare](#)

Sharing is available for the object.

## WorkFeedbackQuestion

Represents a free-form text type or multiple choice question within a set of questions.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
Choices	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> New-line separated list of valid choices for multiple choice questions. Maximum length is 1000 characters.</p>
Detail	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> Detailed instructions on how to answer the question.</p>
IsConfidentialAnswer	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Answers to questions marked confidential will not be shared with the subject of the review. This field applies only to performance summaries.</p>
IsOptional	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If this option is selected, the question is optional and isn't required to be answered. This field applies only to performance summaries.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> A short description of the question, which can be used as a header for reports and Calibration.</p>

Field Name	Details
Number	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The order of the question that is displayed within the question set, such as question number three in a question set that has five questions.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the WorkFeedbackQuestion.</p>
QuestionSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The question set this question is a part of.</p>
Text	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Update</p> <p><b>Description</b> The body of the question. Max length is 16384 characters.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Allows for either a free-form text answer or a multiple choice question defined by new-line separate choices in the 'Choices' field. Valid picklist values are:</p> <ul style="list-style-type: none"> <li>• MultipleChoice</li> <li>• FreeText</li> <li>• Rating</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### WorkFeedbackQuestionHistory

History is available for tracked fields of the object.

### WorkFeedbackQuestionOwnerSharingRule

Sharing rules are available for the object.

### WorkFeedbackQuestionShare

Sharing is available for the object.

## WorkFeedbackQuestionSet

---

Represents a set of questions being asked. The question set is used to link all the individual requests where different recipients were asked the same set of questions on the same subject.

In the WDC performance application, a question set defines the type of summaries and their due dates that will accompany the deployment of a specific performance summary cycle.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
DueDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date that this specific question set is expected to be submitted by the recipient. This field applies only to performance summaries.</p>
FeedbackType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The description of the collection of questions that are written in context to the type of recipient answering them, relative to the subject of the summary. This field applies only to performance summaries.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the question set. Maximum length is 225 characters.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the WorkFeedbackQuestionSet.</p>
PerformanceCycleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> If a question set is associated to a performance summary cycle, then that cycle ID is referenced in this field. This field applies only to performance summaries.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkFeedbackQuestionSetHistory](#)

History is available for tracked fields of the object.

### [WorkFeedbackQuestionSetOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkFeedbackQuestionSetShare](#)

Sharing is available for the object.

## WorkFeedbackRequest

Represents a single feedback request on a subject or topic (question) to a single recipient in the feedback application. In the case of offered feedback, WorkFeedbackRequest represents feedback that is offered about a subject. In the performance application, WorkFeedbackRequest represents a request for feedback on a set of questions from a question set, on a subject—for the recipient to complete and submit.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Additional Considerations and Related Objects

- After a request's state is changed to Submitted, fields can't be changed, except for LastSharedDate and IsUnreadByOwner.
- If LastRemindDate is updated, a reminder notification will be sent to the request's recipient (only possible when request is in Draft state).
- When a new request is created, a notification is sent to the recipient.
- When a recipient of a request submits their feedback (Draft->Submitted), a notification will be sent to requester (except for offered feedback).
- Requester cannot modify the subject of the question set after a request is created.
- For offered feedback (to user, to manager, or both), the person who is offering feedback is both the creator of WorkFeedbackRequest as well as the recipient.

## Fields

Field Name	Details
AdHocFeedback	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The content of the feedback.</p>
AdHocQuestion	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort</p> <p><b>Description</b> The content of the feedback question.</p>
Description	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The description of the WorkFeedbackRequest.</p>
FeedbackRequestState	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The current state of the feedback request. Allowed picklist values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Submitted</li> <li>• Declined</li> </ul>
FeedbackType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Specifies the type of request. Picklist values that are used for performance summaries:</p> <ul style="list-style-type: none"> <li>• Unspecified</li> <li>• Peer Summary</li> <li>• Self Summary</li> <li>• Manager Summary</li> <li>• Skip Level Summary</li> </ul> <p>Picklist values that are used for feedback:</p> <ul style="list-style-type: none"> <li>• Personal</li> <li>• Unsolicited to User</li> <li>• Unsolicited to Manager</li> <li>• Unsolicited to User and Manager</li> <li>• On Topic</li> </ul> <p>The type of the feedback determines the sharing and visibility rules that are applied to answers.</p>
IsDeployed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, the feedback is part of a deployed performance summary cycle.</p>
IsShareWithSubject	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> If <code>true</code>, the feedback is shared with the summary subject.</p>
<code>IsUnreadByOwner</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, the submitted request has not been seen by the requester.</p>
<code>IsUnsolicited</code>	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> If <code>true</code>, the feedback request is unsolicited feedback offered to another user.</p>
<code>LastReferencedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed a record that is related to this WorkFeedbackRequest.</p>
<code>LastRemindDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The last time a reminder was sent to the recipient of this draft request.</p>
<code>LastSharedDate</code>	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The last time this request was shared with another user or group.</p>
<code>LastViewedDate</code>	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this WorkFeedbackRequest. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the WorkFeedbackRequest.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the owner of the WorkFeedbackRequest.</p>
PerformanceCycleId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Used by performance summaries to link to a summary cycle. This field applies only to performance summaries.</p>
QuestionSetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Question set associated with the current request.</p>
RecipientId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> User asked to provide feedback on the subject.</p>

Field Name	Details
RelatedObjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> Specifies a record in the system that this feedback request is related to. Used by ad-hoc feedback to gather feedback in the context of an opportunity or WDC goal.</p> <p>Used by performance summaries to link to a summary cycle.</p>
SharingScope	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The users that see the feedback. <code>SharingScope</code> can have the following values:</p> <ul style="list-style-type: none"> <li>• Nobody</li> <li>• Subject</li> <li>• Manager</li> <li>• SubjectAndManager</li> </ul>
SubjectId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the user that this request (or offer) is about.</p>
SubmitFeedbackToId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the person this performance summary feedback request (and its respective answers) is shared with. It's also the ID of the person who owns the requested subject's manager summary request. This field applies only to performance summaries.</p>
SubmittedDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The last time (in case it was reopened by admin) this request was submitted by the recipient. This field applies only to performance summaries.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkFeedbackRequestFeed](#)

Feed tracking is available for the object.

### [WorkFeedbackRequestHistory](#)

History is available for tracked fields of the object.

### [WorkFeedbackRequestOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkFeedbackRequestShare](#)

Sharing is available for the object.

## WorkGoal

Represents the components of a goal, such as its description and associated metrics. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

[WorkGoalCollaborator](#), [WorkGoalLink](#), [WorkGoalFeed](#)

## Fields

Field Name	Details
ActualValue	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> The actual value of the WorkGoal metric. Applicable only to WorkGoal objects of Type: Metric.</p>
ActualValueExternalUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Contains a URL that references WDC data synchronization for the actual value of a metric. Applicable only to WorkGoal objects of Type: Metric.</p>
CompletionDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The completion date of the goal.</p> <p> <b>Note:</b> Field-level security limits access to only administrators and owners by default, and only they can complete a goal.</p>
Description	<p><b>Type</b> textarea (max length 4000)</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the goal.</p>
DueDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date the WorkGoal object is due (optional). Applicable only to WorkGoal objects of Type: Metric.</p>
FlaggedAs	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

**Field Name****Details****Description**

The progress of the WorkGoal object. Applicable only to WorkGoal objects of `Type: Metric`.

Possible values:

- On Track: Progress on the metric is on track.
- Behind: Progress on the metric is behind schedule.
- Postponed: The metric is postponed.
- Critical: Progress on the metric is critical.

ImageUrl

**Type**

url

**Properties**

Create, Filter, Group, Nillable, Sort, Update

**Description**

The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to WorkGoal objects of `Type: Goal`.

InitialValue

**Type**

double

**Properties**

Create, Filter, Nillable, Sort, Update

**Description**

The initial value of the WorkGoal metric. Applicable only to WorkGoal objects of `Type: Metric` and `MetricType: Progress` or `Percent`.

IsKeyCompanyGoal

**Type**

boolean

**Properties**

Create, Defaulted on create, Filter, Group, Sort, Update

**Description**

Used to indicate if the goal is a key company goal. Used for the Company Goal Showcase. Applicable only to WorkGoal objects of `Type: Goal`.

LastReferencedDate

**Type**

dateTime

**Properties**

Filter, Nillable, Sort

**Description**

The time stamp that indicates when the current user last viewed a record that is related to this goal.

Field Name	Details
LastSyncDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The time stamp that indicates when the actual value was last synced with the associated metrics report.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time stamp that indicates when the current user last viewed this goal.</p>
MetricType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of metric that is represented. (See values in the following list). Applies only to WorkGoal objects of <code>Type: Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>• Progress: ActualValue / TargetValue as a percentage</li> <li>• Percent: the metric as a percentage only</li> <li>• YesNo: the completed / not completed metric as a milestone</li> <li>• Absolute: Deprecated</li> </ul>
MetricTypeDataSource	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Specifies how the metric (ActualValue and CurrentValue) is updated. Applies only to WorkGoal objects of <code>Type: Goal</code> and <code>Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>• Manual: indicates that the actual and target value of the metric is updated manually by the user</li> <li>• Rollup: indicates that the actual and target value of a goal is rolled up automatically by WDC Goals</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <b>DataSyncActualOnly</b>: indicates that the actual value of the metric is linked to a Salesforce report</li> </ul>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> The name of the WorkGoal object. (Maximum length is 255.)</p>
OverallStatus	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The overall calculated status of the WorkGoal based on <code>FlaggedAs</code> and <code>CompletionDate</code>.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> ID of the user who owns the WorkGoal.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Specifies the structural parent of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of <code>Type Metric</code>, which has a parent of WorkGoal of <code>Type Goal</code>.</p> <p> <b>Note:</b> The root and the parent must be set to the parent goal for any child metrics.</p>
Progress	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read Only. The overall progress of the WorkGoal.</p>

Field Name	Details
RootId	<p><b>Type</b> reference to a WorkGoal object</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Specifies the structural root of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of <code>Type Metric</code>, which has a root of WorkGoal of <code>Type Goal</code>.</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The state of the WorkGoal object. Applies only to WorkGoal objects of <code>Type: Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>• Draft: the draft state for the WorkGoal</li> <li>• Published: published state for the WorkGoal</li> <li>• Archived: archived state for the WorkGoal (for example, goals that no longer apply)</li> </ul>
TargetValue	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The target value of the WorkGoal. Applies only to WorkGoal objects of <code>Type: Metric</code>.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The type of the WorkGoal object, used to differentiate between the components of a goal. (This field is used to represent components of a goal such as its description and associated metrics.)</p> <p>Possible values:</p> <ul style="list-style-type: none"> <li>• Goal: a goal</li> <li>• Metric: a metric (typically associated with goals)</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>Objective: an objective</li> <li>KeyResult: a key result (typically associated with objectives)</li> <li>V2Mom: a V2MOM (pilot feature)</li> <li>Vision: a vision (pilot feature — typically associated with V2MOM)</li> <li>Value: a value (pilot feature - typically associated with V2MOM)</li> <li>Method: a method (pilot feature - typically associated with V2MOM)</li> <li>Obstacle: an obstacle (pilot feature - typically associated with V2MOM)</li> <li>Measure: a measure (pilot feature - typically associated with a method)</li> </ul> <p> <b>Note:</b> Administrators can rename goals and metrics to objectives and key results, respectively. If this preference is enabled, use the <code>Type</code> <code>Objective</code> or <code>KeyResult</code>. Otherwise, use the default <code>Type</code> <code>Goal</code> or <code>KeyResult</code>.</p>
Weight	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The weight of the goal or metric. The sum of the weights should equal 100%.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### WorkGoalFeed (API version 35.0)

Feed tracking is available for the object.

### WorkGoalHistory

History is available for tracked fields of the object.

### WorkGoalOwnerSharingRule

Sharing rules are available for the object.

### WorkGoalShare

Sharing is available for the object.

## WorkGoalCollaborator

Represents collaborators on a WorkGoal object. This doesn't include WorkGoal followers, which is handled by Chatter Feed Follow functionality. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
InvitationDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The date that a user was invited to become a collaborator (nill if the user was not invited).</p>
State	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Indicates the state of the collaborating user. Whether the user has not responded, joined, or declined collaboration. The possible values are:</p> <ul style="list-style-type: none"> <li>• PendingResponse: a user who was invited to collaborate but hasn't joined or declined</li> <li>• Joined: a user who is collaborating on a goal (joined/commit)</li> <li>• Declined: a user who declined to collaborate on a goal</li> </ul>
UserId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The collaborating user.</p>
WorkGoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The WorkGoal object that this collaborator is a part of.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkGoalCollaboratorHistory](#)

History is available for tracked fields of the object.

# WorkGoalCollaboratorHistory

---

Represents the history of changes to the values in the fields in a WorkGoalCollaborator object. Access is read-only.

**Note:** This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals in API version 35.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
<code>DataType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
<code>Field</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Name of the standard or custom field.</p>
<code>NewValue</code>	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> New value of the modified field.</p>
<code>OldValue</code>	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Previous value of the modified field.</p>

Field Name	Details
WorkGoalCollaboratorId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the WorkGoalCollaborator object that is associated with this history entry.</p>

## WorkGoalHistory

Represents the history of changes to the values in the fields of a WorkGoal. Access is read-only. This object has been deprecated as of API version 35.0. Use the GoalHistory object to query historical information for WDC goals.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Fields

Field Name	Details
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> Any Type</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> Any Type</p> <p><b>Properties</b> Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The latest value of the field before it was changed.</p>
WorkGoalId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Filter, Group, Sort</p> <p><b>Description</b></p> <p>ID of the Goal. Label is Goal ID.</p>

## WorkGoalLink

Represents the relationship between two goals (many to many relationship). This object has been deprecated as of API version 35.0. Use the [GoalLink](#) object to query information about the relationship between two WDC goals.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
IsActive	<p><b>Type</b></p> <p>boolean</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Whether the WorkGoalLink is active (<code>true</code>) or not (<code>false</code>)</p>
LinkType	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The type of link</p>
Name	<p><b>Type</b></p> <p>string</p>

Field Name	Details
	<p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> The auto-generated name of the goal link</p>
SourceGoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the source WorkGoal object</p>
TargetGoalId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The ID of the target WorkGoal object</p>

## WorkGoalShare

Represents a sharing entry on a WorkGoal object. This object has been deprecated as of API version 35.0. Use the GoalShare object to query information about sharing for WDC goals.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The user's or group's level of access to the goal. The possible values are:</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Read</li> <li>• Edit</li> <li>• All: This value is not valid when you create, update, or delete records</li> </ul> <p>This field must be set to an access level that is higher than the organization's default access level for goals.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the WorkGoal object that is associated with this sharing entry.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Reason that this sharing entry exists. Read-only. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Valid values include:</p> <ul style="list-style-type: none"> <li>• Owner: User is the owner of the WorkGoal or is in a user role above the WorkGoal owner in the role hierarchy.</li> <li>• Manual: User or group has access, because a user with "All" access manually shared the WorkGoal with the user or group.</li> <li>• Rule: User or group has access via a WorkGoal sharing rule.</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user or group that was given access to the goal. This field can't be updated.</p>

## WorkOrder

Represents field service work to be performed for a customer. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Work orders or Field Service Lightning must be enabled.

## Fields

Field Name	Details
AccountId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The account associated with the work order.</p>
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address where the work order is completed.</p>
AssetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The asset associated with the work order.</p>
BusinessHoursId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The business hours associated with the work order.</p>
CaseId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The case associated with the work order.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city where the work order is completed. Maximum length is 40 characters.</p>
ContactId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The contact associated with the work order.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country where the work order is completed. Maximum length is 80 characters.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the work order. Try to include the steps needed to change the work order's status to Completed.</p>

Field Name	Details
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The weighted average of the discounts on all line items in the work order. It can be any positive number up to 100.</p>
Duration	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The estimated time required to complete the work order. Specify the duration unit in the <code>Duration Type</code> field.</p> <p> <b>Note:</b> Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the <code>Duration</code> field on work orders with a custom roll-up summary field.</p>
DurationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The unit of the duration: Minutes or Hours.</p>
EndDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the work order is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the <code>EndDate</code> to 365 days after the <code>StartDate</code>.</p>
EntitlementId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The entitlement associated with the work order.</p>

Field Name	Details
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> Accuracy level of the geocode for the address. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
GrandTotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The total price of the work order with tax added.</p>
IsClosed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Group, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Indicates whether the work order is closed (<code>true</code>) or open (<code>false</code>).</p> <p> <b>Tip:</b> Use this field to report on closed versus open work orders.</p>
IsGeneratedFromMaintenancePlan	<p><b>Type</b> boolean</p> <p><b>Properties</b> Group, Defaulted on create, Filter, Sort</p> <p><b>Description</b> (Read Only) Indicates that the work order was generated from a maintenance plan (<code>true</code>), rather than manually created (<code>false</code>).</p> <p> <b>Note:</b> This option is deselected for work orders that were generated from maintenance plans before Summer '18.</p>
IsStopped	<p><b>Type</b> boolean</p> <p><b>Properties</b> Group, Defaulted on create, Create, Filter, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>Indicates whether a milestone is paused (<code>true</code>) or counting down (<code>false</code>). This field is available only if <b>Enable stopped time and actual elapsed time</b> is selected on the Entitlement Settings page.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date when the work order was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date when the work order was last viewed.</p>
Latitude	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Used with Longitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between <math>-90</math> and <math>90</math> with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
LineItemCount	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>The number of work order line items in the work order. Its label in the user interface is <code>Line Items</code>.</p>
LocationId	<p><b>Type</b></p> <p>reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The location associated with the work order. For example, a work site.</p>
Longitude	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Used with Latitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between -180 and 180 with up to 15 decimal places. See <a href="#">Compound Field Considerations and Limitations</a> for details on geolocation compound fields.</p> <p> <b>Note:</b> This field is available in the API only.</p>
MaintenancePlanId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The maintenance plan associated with the work order. When the work order is auto-generated from a maintenance plan, this field automatically lists the related plan.</p>
MilestoneStatus	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> Indicates the status of a milestone. This field is visible if an entitlement process is applied to a work order.</p>
MinimumCrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The minimum crew size allowed for a crew assigned to the work order.  If you're not using the Field Service Lightning managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the</p>

Field Name	Details
	scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order's minimum crew size requirement.
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The work order's assigned owner.</p>
ParentWorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work order's parent work order, if it has one.</p> <p> <b>Tip:</b> Create a custom report to view a work order's child work orders.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code where the work order is completed. Maximum length is 20 characters.</p>
Pricebook2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The price book associated with the work order. Adding a price book to the work order lets you assign different price book entries to the work order's line items. This is only available if Product2 is enabled.</p>
Priority	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The priority of the work order. The picklist includes the following values, which can be customized:</p>

Field Name	Details
	<ul style="list-style-type: none"> <li>• Low</li> <li>• Medium</li> <li>• High</li> <li>• Critical</li> </ul>
RecommendedCrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The recommended number of people on the service crew assigned to the work order. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.</p>
ReturnOrder	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The return order associated with the work order.</p>
ReturnOrderLineItem	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The return order line item associated with the work order.</p>
RootWorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The top-level work order in a work order hierarchy. Depending on where a work order lies in the hierarchy, its root could be the same as its parent.</p> <p> <b>Note:</b> View a work order's child work order in the Child Work Orders related list.</p>
ServiceAppointmentCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b> The number of service appointments on the work order.</p>
ServiceContractId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service contract associated with the work order.</p>
ServiceReportLanguage	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update, Restricted picklist</p> <p><b>Description</b> The language used for all service reports and service report previews created for the work order, its service appointments, and its work order line items and their service appointments. If the field is blank, service reports are generated in the default language in Salesforce of the person creating the report.</p> <p>To appear as an option in the ServiceReportLanguage field, a language must be set up in Translation Workbench or be one of Salesforce's 18 <a href="#">fully supported languages</a>. Rich text fields and service report section names aren't translated.</p>
ServiceReportTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service report template that the work order uses. If you don't specify a service report template on a work order, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the work order uses the default service report template.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service territory where the work order is taking place.</p>
SlaExitDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The time that the work order exits the entitlement process.</p>
SlaStartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Update, Sort</p> <p><b>Description</b> The time that the work order enters the entitlement process. You can update or reset the time if you have "Edit" permission on work orders.</p>
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date when the work order goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state where the work order is completed. Maximum length is 80 characters.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the work order. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• <i>New</i>—Work order was created, but there hasn't yet been any activity.</li> <li>• <i>In Progress</i>—Work has begun.</li> <li>• <i>On Hold</i>—Work is paused.</li> <li>• <i>Completed</i>—Work is complete.</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <i>Cannot Complete</i>—Work could not be completed.</li> <li>• <i>Closed</i>—All work and associated activity is complete.</li> <li>• <i>Canceled</i>—Work is canceled, typically before any work began.</li> </ul> <p>Changing a work order's status does not affect the status of its work order line items or associated service appointments.</p>
StatusCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The category that each <code>Status</code> value falls into. The <code>Status Category</code> field has eight default values: seven values which are identical to the default <code>Status</code> values, and a <code>None</code> value for statuses without a status category.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, you may decide that it belongs in the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see <a href="#">How are Status Categories Used?</a></p>
StopStartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Indicates when the milestone was paused. The label in the user interface is <code>Stopped Since</code>.</p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name where the work order is completed.</p>
Subject	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The subject of the work order. Try to describe the nature and purpose of the job to be completed. For example, "Annual On-Site Well Maintenance." Maximum length is 255 characters.</p>

Field Name	Details
Subtotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The total of the work order line items' subtotals before discounts and taxes are applied.</p>
SuggestedMaintenanceDate	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The suggested date that the work order is completed. When the work order is auto-generated from a maintenance plan, this field is automatically populated based on the maintenance plan's settings.</p>
Tax	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The total tax on the work order. You can enter a number with or without the currency symbol and use up to two decimal places. For example, in a work order whose total price is \$100, enter \$10 to apply a 10% tax.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The total of the work order line items' prices. This value has discounts applied but not tax.</p>
WorkOrderNumber	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> An eight-digit, auto-generated number that identifies the work order.</p>

Field Name	Details
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work type associated with the work order. When a work type is selected, the work order automatically inherits the work type's <code>Duration</code>, <code>DurationType</code>, and required skills.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### WorkOrderFeed

Feed tracking is available for the object.

### WorkOrderHistory

History is available for tracked fields of the object.

### WorkOrderOwnerSharingRule

Sharing rules are available for the object.

### WorkOrderShare

Sharing is available for the object.

## WorkOrderHistory

Represents the history of changes made to tracked fields on a work order. This object is available in API version 36.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Work orders or Field Service Lightning must be enabled in your organization, and field tracking for work order fields must be configured.

## Fields

Field Name	Details
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The value of the field before it was changed.</p>
WorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the work order being tracked. The history is displayed on the detail page for this record.</p>

## WorkOrderLineItem

Represents a subtask on a work order in field service. This object is available in API version 36.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Work orders or Field Service Lightning must be enabled.

## Fields

Field Name	Details
Address	<p><b>Type</b> address</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> The compound form of the address where the line item is completed.</p>
AssetId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The asset associated with the work order line item. The asset is not automatically inherited from the parent work order.</p>
City	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The city where the line item is completed. Maximum length is 40 characters.</p>
Country	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The country where the line item is completed. Maximum length is 80 characters.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the work order line item. Try to describe the steps needed to mark the line item Completed.</p>
Discount	<p><b>Type</b> percent</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The percent discount to apply to the line item. You can enter a number with or without the percent symbol, and you can use up to two decimal places.</p>
Duration	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The estimated time required to complete the line item. Specify the duration unit in the <code>Duration Type</code> field.</p> <p> <b>Note:</b> Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the Duration field on work orders with a custom roll-up summary field.</p>
DurationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The unit of the duration: Minutes or Hours.</p>
EndDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date on which the line item is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the EndDate to 365 days after the StartDate.</p>
GeocodeAccuracy	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> <b>Note:</b> This field is available in the API only.</p>
IsClosed	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the line item has been closed. Changing the line item's status to <code>Closed</code> causes this checkbox to be selected in the user interface (sets <code>IsClosed</code> to <code>true</code>).</p> <p> <b>Tip:</b> Use this field to report on closed versus open work order line items.</p>
IsGeneratedFromMaintenancePlan	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Identifies whether the work order line item is generated from a maintenance plan.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The date when the line item was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
<code>LastViewedDate</code>	<p><b>Type</b></p> <p><code>dateTime</code></p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date when the line item was last viewed.</p>
<code>Latitude</code>	<p><b>Type</b></p> <p><code>double</code></p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Used with <code>Longitude</code> to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
<code>LineItemNumber</code>	<p><b>Type</b></p> <p><code>string</code></p> <p><b>Properties</b></p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b></p> <p>An auto-generated number that identifies the work order line item. Each work order's line items start at 1.</p>
<code>ListPrice</code>	<p><b>Type</b></p> <p><code>currency</code></p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The price of the line item (product) as listed in its corresponding price book entry. If a price book entry isn't specified, the list price defaults to zero.</p>
<code>Location</code>	<p><b>Type</b></p> <p><code>reference</code></p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>A location associated with the work order line item. For example, a work site.</p>
Longitude	<p><b>Type</b></p> <p>double</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>Used with <code>Latitude</code> to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.</p> <p> <b>Note:</b> This field is available in the API only.</p>
MaintenancePlanId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The maintenance plan associated with the work order line item.</p>
MinimumCrewSize	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The minimum crew size allowed for a crew assigned to the line item.</p> <p>If you're not using the Field Service Lightning managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order line item's minimum crew size requirement.</p>
OrderId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The order associated with the line item. For example, you may need to order replacement parts before you can complete the line item.</p>

Field Name	Details
ParentWorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The line item's parent work order line item, if it has one.</p> <p> <b>Tip:</b> Create a custom report to view a line item's child line items.</p>
PostalCode	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The postal code where the line item is completed. Maximum length is 20 characters.</p>
PricebookEntryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The price book entry (product) associated with the line item. The label in the user interface is <code>Product</code>. This field's lookup search only returns products that are included in the work order's price book.</p>
Product2Id	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> (Read only) The product associated with the price book entry. This field is not available in the user interface. For best results, use the <code>PricebookEntryId</code> field in any custom code or layouts.</p>
Quantity	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Number of units of the line item included in the associated work order.</p>

Field Name	Details
RecommendedCrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The recommended number of people on the service crew assigned to the line item. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.</p>
ReturnOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The return order associated with the work order line item.</p>
ReturnOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The return order line item associated with the work order line item.</p>
RootWorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> (Read only) The top-level line item in a work order line item hierarchy. Depending on where a line item lies in the hierarchy, its root could be the same as its parent.</p> <p> <b>Note:</b> View a line item's child line items in the Child Work Order Line Items related list.</p>
ServiceAppointmentCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The number of service appointments on the work order line item.</p>
ServiceReportTemplateId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service report template that the line item uses. If you don't specify a service report template on a work order line item, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the line item uses the default service report template.</p>
ServiceTerritoryId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service territory where the line item is completed.</p>
StartDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> The date on which the line item goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.</p>
State	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The state where the line item is completed. Maximum length is 80 characters.</p>
Status	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The status of the line item. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> <li>• <b>New</b>—Line item was created, but there hasn't yet been any activity.</li> <li>• <b>In Progress</b>—Work has begun.</li> <li>• <b>On Hold</b>—Work is paused.</li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>Completed—Work is complete.</li> <li>Cannot Complete—Work could not be completed.</li> <li>Closed—All work and associated activity is complete.</li> <li>Canceled—Work is canceled, typically before any work began.</li> </ul>
StatusCategory	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The category that each <code>Status</code> value falls into. The <code>Status Category</code> field has eight default values: seven values which are identical to the default <code>Status</code> values, and a <code>None</code> value for statuses without a status category.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, you may decide that it belongs in the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see <a href="#">How are Status Categories Used?</a></p>
Street	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The street number and name where the line item is completed.</p>
Subject	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> A word or phrase describing the line item.</p>
Subtotal	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> (Read only) The line item's unit price multiplied by the quantity.</p>
SuggestedMaintenanceDate	<p><b>Type</b> dateTime</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Date when maintenance work is planned.</p>
TotalPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> Read only. The line item's subtotal with discounts applied.</p>
UnitPrice	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Initially, the unit price for a work order line item is the line item's list price from the price book, but you can change it.</p>
WorkOrderId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The line item's parent work order. Because work order line items must be associated with a work order, this is a required field.</p>
WorkTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The work type associated with the line item. When a work type is selected, the line item automatically inherits the work type's Duration, Duration Type, and required skills.</p>

## Usage

A work order line item is a child record of a work order. It represents a specific subtask on a work order.

For example, suppose a customer purchased a truck from you. The truck is represented as an asset in your Salesforce org. After some time, the truck needs both headlight bulbs replaced. Here's one way that you can use work orders and work order line items to track the repair.

1. Create a work order named "Replace Headlight Bulbs" from the asset record detail page.
2. Add three work order line items to the work order: "Replace Left Headlight Bulb," "Replace Right Headlight Bulb," and "Test Headlights."
3. Assign the work order to a technician via a queue.
4. As the technician completes each line item, he or she marks the item `Completed`.
5. When all the line items are complete, the technician marks the work order `Completed`.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkOrderLineItemFeed](#)

Feed tracking is available for the object.

### [WorkOrderLineItemHistory](#)

History is available for tracked fields of the object.

## WorkOrderLineItemHistory

---

Represents the history of changes made to tracked fields on a work order line item. This object is available in API version 36.0 and later.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

Work orders or Field Service Lightning must be enabled in your organization, and field tracking for work order line item fields must be configured.

## Fields

Field Name	Details
<code>DataType</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
<code>Field</code>	<p><b>Type</b> picklist</p>

Field Name	Details
	<p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> The name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The new value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The value of the field before it was changed.</p>
WorkOrderLineItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the work order line item being tracked. The history is displayed on the detail page for this record.</p>

## WorkOrderLineItemStatus

---

Represents a possible status of a work order line item in field service.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

### Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The API name of the status value.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates that the status value is the default status on work orders. Only one status value can be the default.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The label for the picklist value that appears in the UI.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.</p>

## Usage

The Status field on work order line items comes with the following values:

- New—Line item was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderLineItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order line item status record, and vice versa.

 **Note:** Work order line items also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

## WorkOrderShare

---

Represents a sharing entry on a work order. This object is available in API version 36.0 and later.

## Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

Work orders or Field Service Lightning must be enabled in your organization. Community users can't access this object.

## Fields

Field Name	Details
AccessLevel	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Level of access that the user or group has to the work order. The possible values are:</p> <ul style="list-style-type: none"> <li>• <i>Read</i></li> <li>• <i>Edit</i></li> </ul>

Field Name	Details
	<ul style="list-style-type: none"> <li>• <i>All</i> (This value isn't valid for create or update calls.)</li> </ul> <p>Set to an access level that is at least equal to the organization's default work order access level.</p>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> The work order associated with the sharing entry.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The reason why this sharing entry exists. You can write to this field only when its value is omitted or set to <i>Manual</i> (default). Valid values include:</p> <ul style="list-style-type: none"> <li>• <i>Manual</i>—The user or group has access because a user with "All" access manually shared the work order.</li> <li>• <i>Owner</i>—The user is the owner of the work order.</li> <li>• <i>Team</i>—The user or group has team access.</li> <li>• <i>Rule</i>—The user or group has access via a work order sharing rule.</li> </ul>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> (Read Only) ID of the user or group that has access to the work order.</p>

## WorkOrderStatus

Represents a possible status of a work order in field service.

### Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
ApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, idLookup, Sort</p> <p><b>Description</b> The API name of the status value.</p>
IsDefault	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates that the status value is the default status on work orders. Only one status value can be the default.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The label for the picklist value that appears in the UI.</p>
SortOrder	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.</p>

## Usage

The Status field on work orders comes with the following values:

- New—Work order was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order status record, and vice versa.

 **Note:** Work orders also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

## WorkPerformanceCycle

---

Represents feedback that is gathered to assess the performance of a specific set of employees.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
ActivityFrom	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The date that you want to start filtering the WDC objects to help requesters create accurate summaries. The start of the evaluation period.</p>
ActivityTo	<p><b>Type</b> date</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The date that you want to stop filtering the WDC objects to help requesters create accurate summaries. The end of the evaluation period.</p>
CurrentTask	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b></p> <p>The current task that the performance summary cycle is engaged in, including deploying and sharing.</p>
LastManagerRequestsSharedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b></p> <p>The date when all manager requests are set to be shared.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed a record that is related to this WorkPerformanceCycle.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed this WorkPerformanceCycle. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p>

Field Name	Details
	<p><b>Description</b></p> <p>The name of the performance summary cycle that employees will participate in. This name is created by the administrator and is visible on all respective notifications and in the UI.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>ID of the owner of the WorkPerformanceCycle.</p>
State	<p><b>Type</b></p> <p>picklist</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b></p> <p>The state that the performance summary cycle is in. Available pick list values:</p> <ul style="list-style-type: none"> <li>• Setup: The summary is in draft.</li> <li>• In Progress: The summary is deployed and people are answering the questions that were created.</li> <li>• Finished: The summary is no longer in progress.</li> <li>• Error: The summary encountered an error.</li> </ul>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkPerformanceCycleFeed](#)

Feed tracking is available for the object.

### [WorkPerformanceCycleHistory](#)

History is available for tracked fields of the object.

### [WorkPerformanceCycleOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkPerformanceCycleShare](#)

Sharing is available for the object.

## WorkReward

Used to store reward codes tied to a Reward Fund. Reward Funds must have at least one WorkReward record.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

You must have the Reward permission enabled in order to use the Rewards feature, including WorkRewardFund and WorkReward.

## Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record to be available for use. Each WorkBadge record with a `RewardId` indicates a reward badge given to a Recipient.

## Fields

Field Name	Details
Code	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Represents a single reward code tied to a RewardFundId.</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Represents the User ID of Owner of WorkReward record</p>
RecipientId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> Salesforce User ID for User associated with this WorkReward record.</p>
RedemptionDisclaimer	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p>

Field Name	Details
	<p><b>Description</b> The disclaimer information about the WorkReward.</p>
RedemptionInfo	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The instructions for redeeming the WorkReward.</p>
RedemptionUrl	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> The URL for redeeming the WorkReward.</p>
RewardFundId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce unique ID for WorkRewardFund record that is associated with WorkReward record.</p>
RewardFundTypeId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce unique ID of the WorkRewardFundType associated with the WorkReward.</p>
Value	<p><b>Type</b> double</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The value of the WorkReward.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### WorkRewardHistory

History is available for tracked fields of the object.

### WorkRewardOwnerSharingRule

Sharing rules are available for the object.

### WorkRewardShare

Sharing is available for the object.

## WorkRewardFund

---

Represents a Reward Fund and describes the Reward Fund attributes.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

To use the Rewards feature, including WorkRewardFund and WorkReward, you must have the Reward permission enabled. To create Rewards, the user must have Create on WorkRewardFund, which is not a standard permission.

## Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record available. Each WorkBadgeDefinition with a RewardFundId is a "Reward Badge."

## Fields

Field Name	Details
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Indicates whether the WorkRewardFund is active (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFund.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed this WorkRewardFund. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>Required. Name of the Reward Fund.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Salesforce unique ID of User who is the Owner of the WorkRewardFund record.</p>
RewardFundTypeId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>Salesforce unique ID of the WorkRewardFundType that is associated with the WorkRewardFund.</p>
TotalCodeCount	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Filter, Group, Nillable, Sort</p> <p><b>Description</b></p> <p>Total reward codes that are available in the WorkRewardFund. Derived from WorkReward records that are associated with the WorkRewardFund.</p>

Field Name	Details
Type	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> RewardType of the WorkRewardFund. Default is Amazon.com.</p>
UsedCodeCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Total reward codes that are used in the WorkRewardFund. Derived from the total assigned WorkReward records that are associated with the WorkRewardFund.</p>
Value	<p><b>Type</b> currency</p> <p><b>Properties</b> Create, Filter, Sort, Update</p> <p><b>Description</b> Value of each of the reward codes in the WorkRewardFund.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkRewardFundFeed](#)

Feed tracking is available for the object.

### [WorkRewardFundHistory](#)

History is available for tracked fields of the object.

### [WorkRewardFundOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkRewardFundShare](#)

Sharing is available for the object.

## WorkRewardFundType

Represents the type of WorkRewardFund object.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field Name	Details
CreditSystem	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The credit system that is used by the WorkRewardFundType object (gift codes or points). If points are selected, the reward message will not consider the CurrencyCode field.</p>
CurrencyCode	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p><b>Description</b> The currency code of the WorkRewardFundType</p>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Whether the WorkRewardFundType is active and available in the UI</p>
IsPredefined	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Whether the WorkRewardFundType is predefined (<code>true</code>) or not (<code>false</code>)</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p>

Field Name	Details
	<p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFundType.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The time stamp that indicates when the current user last viewed this WorkRewardFundType. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>The name of the WorkRewardFundType</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the WorkRewardFundType owner</p>
RedemptionDisclaimer	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>The redemption disclaimer text for the WorkRewardFundType</p>
RedemptionInfo	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Create, Nillable, Update</p> <p><b>Description</b></p> <p>Redemption text for the WorkRewardFundType</p>

Field Name	Details
RedemptionUrl	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The URL that's linked to the redemption</p>
UploadCodeColumn	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The column where the reward code is contained in the CSV file. The upload uses the second value by default.</p>
UploadValueColumn	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The column where the reward value is contained in the CSV file. The upload uses the third column by default.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkRewardFundTypeFeed](#)

Feed tracking is available for the object.

### [WorkRewardFundTypeHistory](#)

History is available for tracked fields of the object.

### [WorkRewardFundTypeOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkRewardFundTypeShare](#)

Sharing is available for the object.

## WorkThanks

---

Represents the source and message of a thanks post.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

## Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks.

## Fields

Field Name	Details
FeedItemId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> ID of the FeedItem related to the thanks badge.</p>
GiverId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> Salesforce user ID for the giver of the Thanks record.</p>
Message	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create</p> <p><b>Description</b> Required. Message associated with the Thanks record.</p>
NetworkId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The ID of the <a href="#">community</a> that this WorkThanks is associated with. This field is available only if Salesforce Communities is enabled in your organization.</p>
OwnerId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> Salesforce user ID for the owner of the badge record (typically the same user as the giver of the record).</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkThanksOwnerSharingRule](#)

Sharing rules are available for the object.

### [WorkThanksShare](#)

Sharing is available for the object.

## WorkType

Represents a type of work to be performed in Field Service Lightning and Lightning Scheduler. Work types are templates that can be applied to work order or work order line items. This object is available in API version 38.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Special Access Rules

Field Service Lightning must be enabled.

## Fields

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> The description of the work type. Try to add details about the task or tasks that this work type represents.</p>

Field Name	Details
DurationType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Defaulted on create, Restricted picklist, Sort, Update</p> <p><b>Description</b> The unit of the <code>Estimated Duration</code>: Minutes or Hours.</p>
EstimatedDuration	<p><b>Type</b> double</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The estimated length of the work. The estimated duration is in minutes or hours based on the value selected in the <code>Duration Type</code> field.</p>
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the work type was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date when the work type was last viewed by the current user.</p>
MinimumCrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The minimum crew size allowed for a crew assigned to the work. Work orders and work order line items inherit their work type's minimum crew size.  If you're not using the Field Service Lightning managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits the minimum crew size requirement.</p>

Field Name	Details
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Sort, Update</p> <p><b>Description</b> The name of the work type. Try to use a name that helps users quickly understand the type of work orders that can be created from the work type. For example, "Annual Refrigerator Maintenance" or "Valve Replacement."</p>
OwnerId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b> The work type's owner.</p>
RecommendedCrewSize	<p><b>Type</b> int</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The recommended number of people on the service crew assigned to the work. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3. Work orders and work order line items inherit their work type's recommended crew size.</p>
ServiceReportTemplateId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The service report template associated with the work type. When users create service reports from a work order or work order line item that uses this work type, the reports will use this template.</p>
ShouldAutoCreateSvcAppt	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Filter, Group, Defaulted on create, Sort, Update</p> <p><b>Description</b> Select this option to have a service appointment automatically created on work orders and work order line items that use the work type.</p>

**Field Name****Details****Note:**

- By default, the Due Date on auto-created service appointments is seven days after the created date. Admins can adjust this offset from the Field Service Settings page in Setup.
- If a work type with the Auto-Create Service Appointment option selected is added to an existing work order or work order line item, a service appointment is only created for the work order or work order line item if it doesn't yet have one.
- If someone updates an existing work type by selecting the Auto-Create Service Appointment option, service appointments aren't created on work orders and work order line items that were already using the work type.

## Usage

Adding a work type to a work order or work order line item causes the record to inherit the work type's duration values and required skills and products.

**Note:**

- If needed, you can update the duration values and required skills and products on a work order or work order line item after they're inherited from the work type.
- If a work order or work order line item already has required skills or products, associating it with a work type doesn't cause it to inherit the work type's requirements.
- Customizations to required skills or products, such as validation rules or Apex triggers, are not carried over from work types to work orders and work order line items.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

**WorkTypeFeed**

Feed tracking is available for the object.

**WorkTypeHistory**

History is available for tracked fields of the object.

**WorkTypeOwnerSharingRule**

Sharing rules are available for the object.

**WorkTypeShare**

Sharing is available for the object.

# WorkTypeGroup

---

Represents a grouping of work types used to categorize types of appointments available in Lightning Scheduler, or to define scheduling limits in Field Service Lightning. This object is available in API version 45.0 and later.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
AdditionalInformation	<p><b>Type</b> multipicklist</p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> Additional information about the types of appointments this work type group represents.</p>
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Nillable, Update</p> <p><b>Description</b> A description of this work type group.</p>
GroupType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The category of this work type group. Possible values are:</p> <ul style="list-style-type: none"> <li>• <code>Capacity</code>—A group of work types used to define a work capacity limit in Field Service Lightning.</li> <li>• <code>Default</code>—A non-capacity group of work types used in Lightning Scheduler.</li> </ul>
IsActive	<p><b>Type</b> boolean</p> <p><b>Properties</b> Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p><b>Description</b></p> <p>Indicates whether this work type group can be used for appointment scheduling or work capacity limits. A work type can belong to only one active work type group of type Capacity.</p>
LastReferencedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p><b>Type</b></p> <p>dateTime</p> <p><b>Properties</b></p> <p>Filter, Nillable, Sort</p> <p><b>Description</b></p> <p>The timestamp for when the current user last viewed this object.</p>
Name	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b></p> <p>The name of this work type group.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the user who created this record.</p>

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkTypeGroupFeed](#)

Feed tracking is available for the object.

### [WorkTypeGroupHistory](#)

History is available for tracked fields of the object.

### [WorkTypeGroupOwnerSharingRule](#)

Sharing rules are available for the object.

**WorkTypeGroupShare**

Sharing is available for the object.

## WorkTypeGroupMember

---

Represents the relationship between a work type and the work type group it belongs to. This object is available in API version 45.0 and later.

### Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

### Fields

Field	Details
LastReferencedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Filter, Nillable, Sort</p> <p><b>Description</b> The timestamp for when the current user last viewed this object.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p><b>Description</b> Autogenerated number identifying the work type group membership. It uses the format #####.</p>
WorkTypeGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field	Details
	<b>Description</b> The ID of the work type group that this record belongs to.
WorkTypeId	<b>Type</b> reference <b>Properties</b> Create, Filter, Group, Sort <b>Description</b> The ID of the work type that this record corresponds to.

## Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

### [WorkTypeGroupMemberFeed](#)

Feed tracking is available for the object.

### [WorkTypeGroupMemberHistory](#)

History is available for tracked fields of the object.

## CHAPTER 3 Custom Objects

This section provides details on custom objects, entities that support custom objects, and their standard fields.

When you create or enable features for a custom object, Salesforce creates entities to support your custom object. For example, when you enable sharing rules for a custom object, Salesforce creates a *MyObjectName\_\_Share* object.

To verify the complete list of fields for an object or entity, you can use a describe call from the API, or inspect with an appropriate tool, for example, inspecting the WSDL or using a schema viewer.

### [Custom Metadata Type\\_\\_mdt](#)

Represents a custom metadata record. This object is available in API version 34.0 and later.

### [Custom Object\\_\\_c](#)

Represents a custom object.

### [Custom Object\\_\\_Feed](#)

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

## *Custom Metadata Type\_\_mdt*

---

Represents a custom metadata record. This object is available in API version 34.0 and later.

The object name is a variable with the syntax *Custom Metadata Type\_\_mdt*, where *Custom Metadata Type* is the `ObjectName` for the custom metadata type associated with the custom metadata record. For example, `PicklistUsage__mdt` represents a custom metadata record based on the `PicklistUsage` custom metadata type.

## Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

## Fields

Field	Details
<i>Custom Field__c</i>	<b>Type</b> Any Type <b>Properties</b> Filter, Group, Nillable, Sort <b>Description</b> A custom field on the record.

---

Field	Details
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
isProtected	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> When a custom metadata type's records are released in a managed package, access to them is limited in specific ways.</p> <ul style="list-style-type: none"> <li>• Code that's in the same managed package as custom metadata records can read the records.</li> <li>• Code that's in the same managed package as custom metadata types can read the records that belong to that type.</li> <li>• Code that's in a managed package that doesn't contain either the type or the protected record can't read the protected records.</li> <li>• Code that the subscriber creates and code that's in an unmanaged package can't read the protected records.</li> <li>• The developer can modify protected records only with a package upgrade. The subscriber can't read or modify protected records. The developer name of a protected record can't be changed after release.</li> </ul> <p>Records that are hidden by these access rules are also unavailable to REST, SOAP, SOQL, and Setup.</p>
Label	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The custom metadata record label. This label value is always the same as the <code>MasterLabel</code> value.</p>

Field	Details
Language	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, restrictedPicklist, Sort</p> <p><b>Description</b> The language of the custom metadata record. This value is always the default language of the developing organization.</p>
MasterLabel	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The master label for the custom metadata record.</p>
NamespacePrefix	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <b><i>namespacePrefix__componentName</i></b> notation.</p>
QualifiedApiName	<p><b>Type</b> string</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> A concatenation of the namespace prefix and developer name. The format is <b><i>NamespacePrefix__DeveloperName</i></b>.</p>

## Custom Object\_\_C

---

Represents a custom object.

The custom object name is a variable with the syntax `Custom_Object__c`, where `Custom_Object` is the object's Name associated with the record, followed by two underscores and `c`. For example, a custom object labeled "Issue" in the Salesforce user interface is `Issue__c` in that organization's WSDL.

System fields and properties behave the same on custom objects as they do on standard objects, unless otherwise noted in the following details.

## Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

## Fields

Field	Details
ConnectionReceivedId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Nillable</p> <p><b>Description</b> ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CreatedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> ID of the <a href="#">User</a> who created this record.</p>
CreatedDate	<p><b>Type</b> dateTime</p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Date and time when this record was created.</p>
CurrencyIsoCode	<p><b>Type</b> picklist</p>

Field	Details
	<p><b>Properties</b> Defaulted on createFilter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Id	<p><b>Type</b> <a href="#">Id</a></p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Group, idLookup, Sort</p> <p><b>Description</b> Globally unique string that identifies a record. For information on IDs, see <a href="#">ID Field Type</a>.</p>
IsDeleted	<p><b>Type</b> <a href="#">boolean</a></p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <b>Deleted</b>.</p>
LastActivityDate	<p><b>Type</b> <a href="#">dateTime</a></p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> Value is one of the following, whichever is the most recent:</p> <ul style="list-style-type: none"> <li>• Due date of the most recent event logged against the object.</li> <li>• Due date of the most recently closed task associated with the object.</li> </ul>
LastModifiedDate	<p><b>Type</b> <a href="#">dateTime</a></p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Sort</p> <p><b>Description</b> Date and time when a user last modified this record.</p>
LastModifiedById	<p><b>Type</b> <a href="#">reference</a></p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p><b>Description</b> ID of the <a href="#">User</a> who last updated this object.</p>
LastReferencedDate	<p><b>Type</b> <a href="#">dateTime</a></p> <p><b>Properties</b> Aggregatable, Filter, Sort, Nillable</p> <p><b>Description</b> The timestamp for when the current user last viewed a record related to this object.</p>
LastViewedDate	<p><b>Type</b> <a href="#">dateTime</a></p> <p><b>Properties</b> Aggregatable, Filter, Sort, Nillable</p> <p><b>Description</b> The timestamp for when the current user last viewed this object. If this value is null, this object might only have been referenced (<a href="#">LastReferencedDate</a>) and not viewed.</p>
Name	<p><b>Type</b> <a href="#">string</a> on page 3</p> <p><b>Properties</b> Aggregatable, Create, Defaulted on create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Label is <b>Object Name</b>. Name of the object. Maximum size is 80 characters.  When the object is created using an API <code>update ()</code> call, and the Name field is null, Salesforce sets the value to the record ID. When the object is created using an API <code>create ()</code> call, Salesforce sets the initial value to the record ID. You can't set the Name field to null.</p>
RecordTypeId	<p><b>Type</b> <a href="#">reference</a></p> <p><b>Properties</b> Create, Filter, Nillable, Update</p> <p><b>Description</b> ID of the record type assigned to this object. Create at least one record type before this field appears for custom or standard objects.</p>
SystemModStamp	<p><b>Type</b> <a href="#">dateTime</a></p> <p><b>Properties</b> Aggregatable, Defaulted on create, Filter, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger.</p>
OwnerId	<p><b>Type</b></p> <p>reference</p> <p><b>Properties</b></p> <p>Aggregatable, Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update</p> <p><b>Description</b></p> <p>The ID of the user who currently owns this object. Default value is the user logged in to the API to perform the <code>create()</code> call.</p>

## Custom Object\_\_Feed

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

A custom object feed shows posts and changes to the object's tracked fields. The object name is variable and uses *Custom Object\_\_Feed* syntax, where *Custom Object* is the name of the custom object. For example, *Textile\_\_Feed* represents a feed on the custom object *Textile\_\_c*.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in communities where threaded discussions and delete-blocking are enabled. Community members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, like *Textile\_\_c*.
- Moderate Chatter

**Note:** Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

## Fields

Field	Details
BestCommentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.</p>
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>
CommentCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of comments associated with this feed item.</p> <p> <b>Tip:</b> In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>.</p> <p>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.</p>
ConnectionId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p>

Field	Details
	<p><b>Description</b></p> <p>When a PartnerNetworkConnection modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your organization.</p>
ContentData	<p><b>Type</b></p> <p>base64</p> <p><b>Properties</b></p> <p>Nullable</p> <p><b>Description</b></p> <p>Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentDescription	<p><b>Type</b></p> <p>textarea</p> <p><b>Properties</b></p> <p>Nullable, Sort</p> <p><b>Description</b></p> <p>Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>.</p>
ContentFileName	<p><b>Type</b></p> <p>string</p> <p><b>Properties</b></p> <p>Group, Nullable, Sort</p> <p><b>Description</b></p> <p>Available in API version 36.0 and earlier only. This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentSize	<p><b>Type</b></p> <p>int</p> <p><b>Properties</b></p> <p>Group, Nullable, Sort</p> <p><b>Description</b></p> <p>Available in API version 36.0 and earlier only. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
ContentType	<p><b>Type</b></p> <p>string</p>

Field	Details
	<p><b>Properties</b> Group, Nillable, SortGroup</p> <p><b>Description</b> Available in API version 36.0 and earlier only. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
FeedPostId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only.  ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.</p>
InsertedById	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.</p>
IsRichText	<p><b>Type</b> boolean</p> <p><b>Properties</b> Defaulted on create, Filter, Group, Sort</p> <p><b>Description</b> Indicates whether the feed item <code>Body</code> contains rich text. Set <code>IsRichText</code> to <code>true</code> if you post a rich text feed item via SOAP API. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags:</p> <ul style="list-style-type: none"> <li>• <code>&lt;p&gt;</code></li> <li>•  <b>Tip:</b> Though the <code>&lt;br&gt;</code> tag isn't supported, you can use <code>&lt;p&gt;&amp;nbspsp;&lt;/p&gt;</code> to create lines.</li> <li>• <code>&lt;a&gt;</code></li> <li>• <code>&lt;b&gt;</code></li> <li>• <code>&lt;code&gt;</code></li> <li>• <code>&lt;i&gt;</code></li> </ul>

Field	Details
	<ul style="list-style-type: none"> <li>• <code>&lt;u&gt;</code></li> <li>• <code>&lt;s&gt;</code></li> <li>• <code>&lt;ul&gt;</code></li> <li>• <code>&lt;ol&gt;</code></li> <li>• <code>&lt;li&gt;</code></li> <li>• <code>&lt;img&gt;</code></li> </ul> <p>The <code>&lt;img&gt;</code> tag is accessible only via the API and must reference files in Salesforce similar to this example: <code>&lt;img src="sfdc://069B0000000omjh"&gt;&lt;/img&gt;</code></p> <p> <b>Note:</b> In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of likes associated with this feed item.</p>
LinkUrl	<p><b>Type</b> url</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The URL of a <code>LinkPost</code>.</p>
NetworkScope	<p><b>Type</b> picklist</p> <p><b>Properties</b> Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether this feed item is available in the default community, a specific community, or all communities. This field is available in API version 26.0 and later, if Salesforce Communities are enabled for your organization.</p> <p><code>NetworkScope</code> can have the following values:</p> <ul style="list-style-type: none"> <li>• <code>NetworkId</code>—The ID of the community in which the <code>FeedItem</code> is available. If left empty, the feed item is only available in the default community.</li> <li>• <code>AllNetworks</code>—The feed item is available in all communities.</li> </ul> <p>Note the following exceptions for <code>NetworkScope</code>:</p>

Field	Details
	<ul style="list-style-type: none"> <li>• Only feed items with a Group or User parent can set a <code>NetworkId</code> or a null value for <code>NetworkScope</code>.</li> <li>• For feed items with a record parent, users can set <code>NetworkScope</code> only to <code>AllNetworks</code>.</li> <li>• You can't filter a feed item on the <code>NetworkScope</code> field.</li> </ul>
ParentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the custom object record that is tracked in the feed. The feed is displayed on the detail page for this record.</p>
RelatedRecordId	<p><b>Type</b> reference</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> ID of the <code>ContentVersion</code> object associated with a <code>ContentPost</code>. This field is null for all posts except <code>ContentPost</code>.</p>
Title	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.</p>
Type	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> The type of feed item:</p> <ul style="list-style-type: none"> <li>• <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a <a href="#">Task</a> associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or <a href="#">Event</a> associated with a case record (excluding email and call logging).</li> </ul>

Field	Details
	<p>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.</p> <ul style="list-style-type: none"> <li>• <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.</li> <li>• <code>AnnouncementPost</code>—Not used.</li> <li>• <code>ApprovalPost</code>—generated when a user submits an approval.</li> <li>• <code>BasicTemplateFeedItem</code>—Not used.</li> <li>• <code>CanvasPost</code>—a post made by a canvas app posted on a feed.</li> <li>• <code>CollaborationGroupCreated</code>—generated when a user creates a public group.</li> <li>• <code>CollaborationGroupUnarchived</code>—Not used.</li> <li>• <code>ContentPost</code>—a post with an attached file.</li> <li>• <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher.</li> <li>• <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold.</li> <li>• <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed.</li> <li>• <code>LinkPost</code>—a post with an attached URL.</li> <li>• <code>PollPost</code>—a poll posted on a feed.</li> <li>• <code>ProfileSkillPost</code>—generated when a skill is added to a user’s Chatter profile.</li> <li>• <code>QuestionPost</code>—generated when a user posts a question.</li> <li>• <code>ReplyPost</code>—generated when Chatter Answers posts a reply.</li> <li>• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC.</li> <li>• <code>TextPost</code>—a direct text entry on a feed.</li> <li>• <code>TrackedChange</code>—a change or group of changes to a tracked field.</li> <li>• <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated.</li> </ul> <p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to CaseFeed:</p> <ul style="list-style-type: none"> <li>• <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object</li> <li>• <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received</li> <li>• <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.</li> <li>• <code>ChangeStatusPost</code>—generated event when a user changes the status of a case</li> <li>• <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case</li> </ul> <p> <b>Note:</b> If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

Field	Details
Visibility	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if Salesforce Communities are enabled for your organization.</p> <p>Visibility can have the following values:</p> <ul style="list-style-type: none"> <li>• <code>AllUsers</code>—The feed item is available to all users who have permission to see the feed item.</li> <li>• <code>InternalUsers</code>—The feed item is available to internal users only.</li> </ul> <p>Note the following exceptions for <code>Visibility</code>:</p> <ul style="list-style-type: none"> <li>• For record posts, <code>Visibility</code> is set to <code>InternalUsers</code> for all internal users by default.</li> <li>• External users can set <code>Visibility</code> only to <code>AllUsers</code>.</li> <li>• On user and group posts, only internal users can set <code>Visibility</code> to <code>InternalUsers</code>.</li> </ul>

## Usage

A feed for a custom object is automatically created when a user enables feed tracking for the custom object. Use feeds to track changes to the custom objects they serve. For example, `Textile__Feed` tracks changes to a `Textile__c` object. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

## What About *StandardObjectName*Feed Objects?

Similar to custom objects, standard objects can have associated feed objects. For a list of *StandardObjectName*Feed objects, see [StandardObjectNameFeed](#).

## CHAPTER 4 Associated Objects (Feed, History, OwnerSharingRule, and Share Objects)

This section provides a list of objects associated to standard objects and their standard fields.

Some fields may not be listed for some objects. To see the system fields for each object, see [System Fields](#).

To verify the complete list of fields for an object, use a describe call from the API or inspect with an appropriate tool. For example, inspect the WSDL or use a schema viewer.

### [StandardObjectNameFeed](#)

*StandardObjectNameFeed* is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

### [StandardObjectNameHistory](#)

*StandardObjectNameHistory* is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

### [StandardObjectNameOwnerSharingRule](#)

*StandardObjectNameOwnerSharingRule* is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

### [StandardObjectNameShare](#)

*StandardObjectNameShare* is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

## *StandardObjectNameFeed*

---

*StandardObjectNameFeed* is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

The object name is variable and uses *StandardObjectNameFeed* syntax. For example, *AccountFeed* represents the posts and feed-tracked changes on an account record. We list the available associated feed objects at the end of this topic. For specific version information, see the documentation for the standard object.

## Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in communities where threaded discussions and delete-blocking are enabled. Community members can delete all feed items they created, provided the feed items don't have content

nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, like Account for AccountFeed
- Moderate Chatter

 **Note:** Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

For more special access rules, if any, see the documentation for the standard object. For example, for AccountFeed, see the special access rules for Account.

## Fields

Field	Details
BestCommentId	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.</p>
Body	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>
CommentCount	<p><b>Type</b> int</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> The number of comments associated with this feed item.</p> <p> <b>Tip:</b> In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed,</p>

Field	Details
	<p>comments aren't counted until approved by an admin or someone with Can Approve Feed Post and Comment or Modify All Data.</p> <p>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.</p>
<code>ConnectionId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Nillable, Sort</p> <p><b>Description</b> When a <code>PartnerNetworkConnection</code> modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the <code>PartnerNetworkConnection</code>. Available if Salesforce to Salesforce is enabled for your organization.</p>
<code>ContentData</code>	<p><b>Type</b> base64</p> <p><b>Properties</b> Nillable</p> <p><b>Description</b> Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
<code>ContentDescription</code>	<p><b>Type</b> textarea</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>.</p>

<code>Title</code>	<p><b>Type</b> string</p> <p><b>Properties</b> Group, Nillable, Sort</p> <p><b>Description</b> The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.</p>
<code>Type</code>	<p><b>Type</b> picklist</p>

**Field**

**Details**

**Properties**

Filter, Group, Nillable, Restricted picklist, Sort

**Description**

The type of feed item:

- **ActivityEvent**—indirectly generated event when a user or the API adds a **Task** associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a **Task** or **Event** associated with a case record (excluding email and call logging).

For a recurring **Task** with **CaseFeed** disabled, one event is generated for the series only. For a recurring **Task** with **CaseFeed** enabled, events are generated for the series and each occurrence.

- **AdvancedTextPost**—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post.
- **AnnouncementPost**—Not used.
- **ApprovalPost**—generated when a user submits an approval.
- **BasicTemplateFeedItem**—Not used.
- **CanvasPost**—a post made by a canvas app posted on a feed.
- **CollaborationGroupCreated**—generated when a user creates a public group.
- **CollaborationGroupUnarchived**—Not used.
- **ContentPost**—a post with an attached file.
- **CreatedRecordEvent**—generated when a user creates a record from the publisher.
- **DashboardComponentAlert**—generated when a dashboard metric or gauge exceeds a user-defined threshold.
- **DashboardComponentSnapshot**—created when a user posts a dashboard snapshot on a feed.
- **LinkPost**—a post with an attached URL.
- **PollPost**—a poll posted on a feed.
- **ProfileSkillPost**—generated when a skill is added to a user’s Chatter profile.
- **QuestionPost**—generated when a user posts a question.
- **ReplyPost**—generated when Chatter Answers posts a reply.
- **RypplePost**—generated when a user creates a Thanks badge in WDC.
- **TextPost**—a direct text entry on a feed.
- **TrackedChange**—a change or group of changes to a tracked field.
- **UserStatus**—automatically generated when a user adds a post. Deprecated.

The following values appear in the **Type** picklist for all feed objects but apply only to **CaseFeed**:

- **CaseCommentPost**—generated event when a user adds a case comment for a case object
- **EmailMessageEvent**—generated event when an email related to a case object is sent or received

Field	Details
	<ul style="list-style-type: none"> <li>• <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event.</li> <li>• <code>ChangeStatusPost</code>—generated event when a user changes the status of a case</li> <li>• <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case</li> </ul> <p> <b>Note:</b> If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

<p>Visibility</p>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if Salesforce Communities are enabled for your organization.</p> <p>Visibility can have the following values:</p> <ul style="list-style-type: none"> <li>• <code>AllUsers</code>—The feed item is available to all users who have permission to see the feed item.</li> <li>• <code>InternalUsers</code>—The feed item is available to internal users only.</li> </ul> <p>Note the following exceptions for <code>Visibility</code>:</p> <ul style="list-style-type: none"> <li>• For record posts, <code>Visibility</code> is set to <code>InternalUsers</code> for all internal users by default.</li> <li>• External users can set <code>Visibility</code> only to <code>AllUsers</code>.</li> <li>• On user and group posts, only internal users can set <code>Visibility</code> to <code>InternalUsers</code>.</li> </ul>
-------------------	--

## Usage

A feed for an object is automatically created when a user enables feed tracking for the object. Use feeds to track changes to records. For example, `AccountFeed` tracks changes to an account record. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

- `NewsFeed` and `UserProfileFeed` are available in API version 18.0 through API version 26.0. In API version 27.0 and later, `NewsFeed` and `UserProfileFeed` are no longer available in SOAP API. Use Connect REST API to access `NewsFeed` and `UserProfileFeed`.

Use the `NewsFeed` object to query and retrieve lead feed items associated with a converted lead record.

- For `NewsFeed` and `UserProfileFeed`, users who do not have the View All Data permission have the following limitations when querying records: Must specify a `LIMIT` clause and the limit must be less than or equal to 1000. Can include a `WHERE` clause that references object fields, but can't include references to fields in related objects. For example, you can filter by `CreatedDate` or `ParentId`, but not by `Parent.Name`. Can include an `ORDER BY` clause that references object fields, but can't include

references to fields in related objects. For example, `ORDER BY CreatedDate` or `ParentId`, but not by `Parent.Name`. To query for the most recent feed items, `ORDER BY CreatedDate DESC, Id DESC`.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

- The name `Article_Type__Feed` is variable, where `Article Type` is the object name for the article type associated with the article. For example, `Offer__Feed` represents a feed on an article of type `Offer`.
- Field Service Lightning must be enabled in your organization for `ServiceAppointmentFeed`, `ServiceCrewFeed`, `ServiceMemberFeed`, `ServiceResourceCapacityFeed`, `ServiceResourceFeed`, `ServiceResourceSkillFeed`, `ServiceTerritoryFeed`, `ServiceTerritoryMemberFeed`, and `SkillRequirementFeed`.
- For `WorkOrderFeed`, Work Orders or Field Service Lightning must be enabled in your organization.
- On `UserFeed`, if you use the `FeedComment` object to comment on a user record, the user can delete the comment. For example, if John Smith adds a comment to the feed on Sasha Jones' user record, Sasha can delete the comment.

## Objects That Follow This Model

These objects follow the standard pattern for associated feed objects.

- `AccountFeed`
- `AccountRelationshipFeed`
- `ActiveScratchOrgFeed`
- `AssetFeed`
- `AssetDowntimePeriodFeed`

## Objects That Don't Follow This Model

[Custom object feed objects](#) and *Article Type\_\_Feed* (API 20.0) use a different naming syntax, but they have the same supported calls and fields.

## *StandardObjectNameHistory*

---

*StandardObjectNameHistory* is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

The object name is variable and uses *StandardObjectNameHistory* syntax. For example, *AccountHistory* represents the history of changes to the values of an account record's fields. We list the available associated history objects at the end of this topic. For specific version information, see the documentation for the standard object.

## Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *AccountHistory*, see the special access rules for *Account*.

## Fields

Field Name	Details
<i>StandardObjectId</i>	<p><b>Type</b> reference</p> <p><b>Properties</b> Filter, Group, Sort</p> <p><b>Description</b> ID of the standard object.</p>
DataType	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Data type of the field that was changed.</p>
Field	<p><b>Type</b> picklist</p> <p><b>Properties</b> Filter, Group, Restricted picklist, Sort</p> <p><b>Description</b> Name of the field that was changed.</p>
NewValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> New value of the field that was changed.</p>
OldValue	<p><b>Type</b> anyType</p> <p><b>Properties</b> Nillable, Sort</p> <p><b>Description</b> Old value of the field that was changed.</p>

## Objects That Follow This Model

These objects follow the standard pattern for associated history objects.

## Objects That Don't Follow This Model

These objects *don't* follow the standard pattern for associated history objects. They are documented separately.

- [KnowledgeArticleVersionHistory](#)
- [OpportunityHistory](#)
- [ProcessInstanceHistory](#)
- [RecordActionHistory](#)
- [WebCartHistory](#)

## *StandardObjectNameOwnerSharingRule*

---

*StandardObjectNameOwnerSharingRule* is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

The object name is variable and uses *StandardObjectNameOwnerSharingRule* syntax. For example, *ChannelProgramOwnerSharingRule* is a rule for sharing a channel program with users other than the channel program owner. We list the available associated owner sharing rule objects at the end of this topic. For specific version information, see the standard object documentation.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *ChannelProgramOwnerSharingRule*, see the special access rules for *ChannelProgram*.

## Fields

Field Name	Details
<code>AccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> Determines the level of access users have to records. Values are:</p> <ul style="list-style-type: none"> <li>• <code>Read</code> (read only)</li> <li>• <code>Edit</code> (read/write)</li> </ul>

Field Name	Details
Description	<p><b>Type</b> textarea</p> <p><b>Properties</b> Create, Filter, Nillable, Sort, Update</p> <p><b>Description</b> Description of the sharing rule. Maximum length is 1000 characters.</p>
DeveloperName	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Sort, Update</p> <p><b>Description</b> The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> <b>Note:</b> When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the source group. Records that are owned by users in the source group trigger the rule to give access.</p>
Name	<p><b>Type</b> string</p> <p><b>Properties</b> Create, Filter, Group, idLookup, Sort, Update</p> <p><b>Description</b> Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.</p>
UserOrGroupId	<p><b>Type</b> reference</p>

Field Name	Details
	<p><b>Properties</b> Create, Filter, Group, Sort</p>
	<p><b>Description</b> ID of the user or group that you are granting access to.</p>

## Objects That Follow This Model

These objects follow the standard pattern for associated owner sharing rule objects.

- AccountBrandOwnerSharingRule
- AccountRelationshipOwnerSharingRule

## *StandardObjectNameShare*

---

*StandardObjectNameShare* is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

The object name is variable and uses *StandardObjectNameShare* syntax. For example, *AccountBrandShare* is a sharing entry on an account brand. We list the available associated share objects at the end of this topic. For specific version information, see the standard object documentation.

## Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

## Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *AccountBrandShare*, see the special access rules for *AccountBrand*.

## Fields

Field Name	Details
<code>AccessLevel</code>	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Restricted picklist, Sort, Update</p> <p><b>Description</b> The level of access allowed. Values are:</p> <ul style="list-style-type: none"> <li>• <code>All</code> (owner)</li> <li>• <code>Edit</code> (read/write)</li> <li>• <code>Read</code> (read only)</li> </ul>
<code>ParentId</code>	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p>

Field Name	Details
	<p><b>Description</b> ID of the parent record.</p>
RowCause	<p><b>Type</b> picklist</p> <p><b>Properties</b> Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p><b>Description</b> Reason that the sharing entry exists.</p>
UserOrGroupId	<p><b>Type</b> reference</p> <p><b>Properties</b> Create, Filter, Group, Sort</p> <p><b>Description</b> ID of the user or group that has been given access to the object.</p>

## CHAPTER 5 Data Model

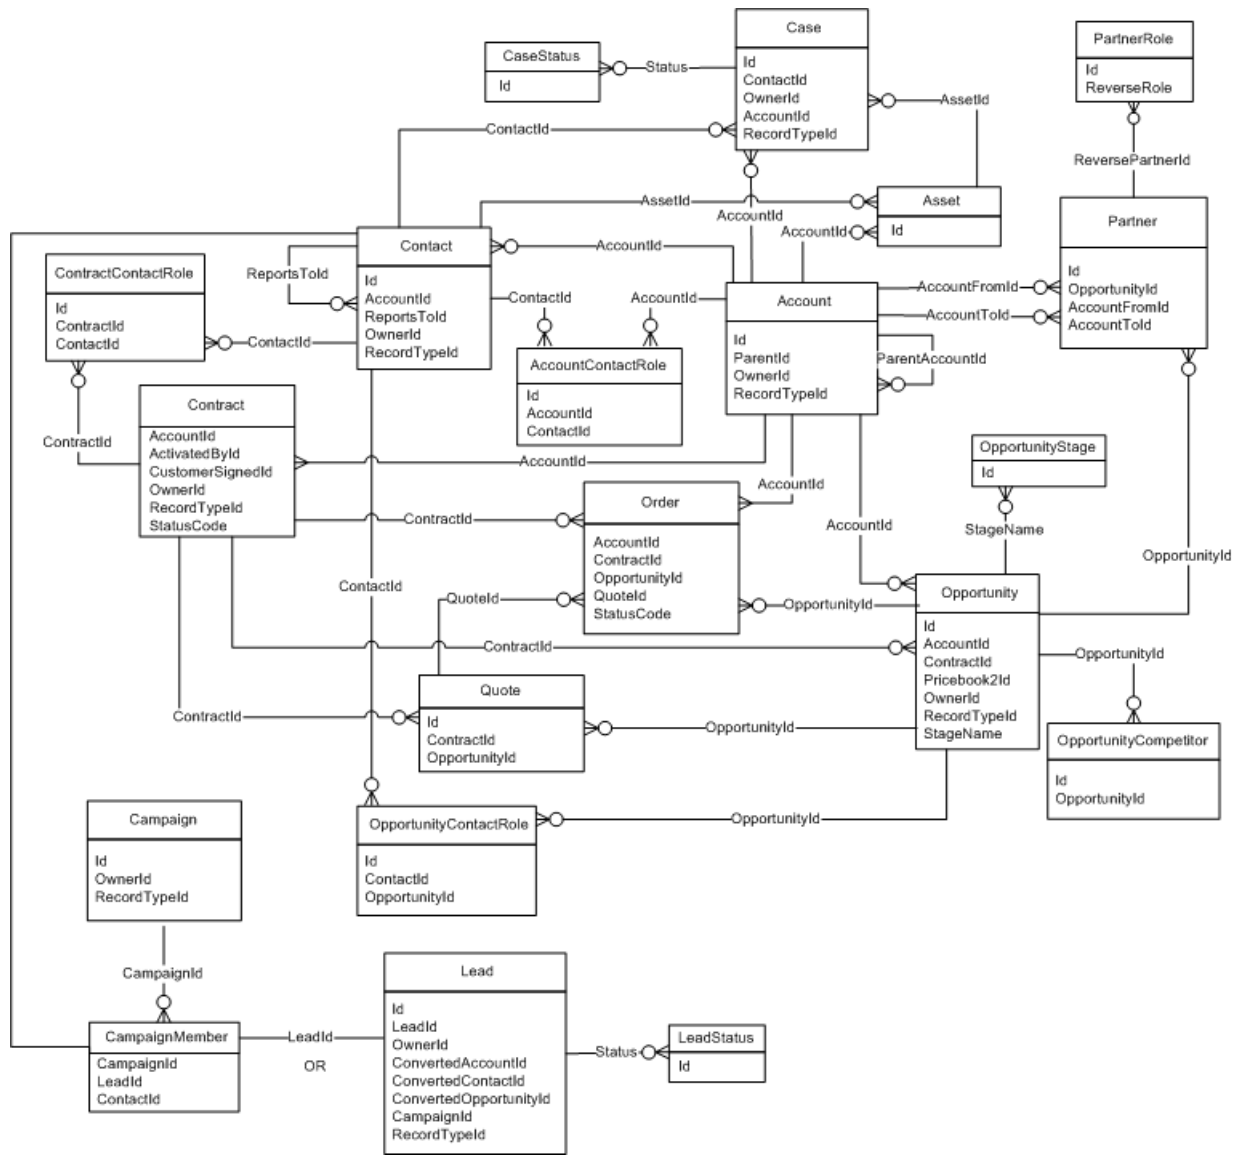

The entity relationship diagrams (ERDs) for standard Salesforce objects in this section illustrate important relationships between objects. Salesforce ERDs use crow's foot notation. The following ERDs are available.

- [Sales Objects](#)—includes accounts, contacts, opportunities, leads, campaigns, and other related objects
- [Task and Event Objects](#)—includes tasks and events and their related objects
- [Support Objects](#)—includes cases and solutions and their related objects
- [Salesforce Knowledge Objects](#)—includes view and vote statistics, article versions, and other related objects
- [Document, Note, and Attachment Objects](#)—includes documents, notes, and attachments and their related objects
- [User, Sharing, and Permission Objects](#)—includes users, profiles, and roles
- [User Email Objects](#)
- [Profile and Permission Objects](#)—includes users, profiles, permission sets, and related permission objects
- [Record Type Objects](#)—includes record types and business processes and their related objects
- [Product and Schedule Objects](#)—includes opportunities, products, and schedules
- [Sharing and Team Selling Objects](#)—includes account teams, opportunity teams, and sharing objects
- [Forecasts Objects](#)—includes objects for Collaborative Forecasts.
- [Territory Management 2.0 Objects](#)—includes territories and related objects associated with Territory Management 2.0
- [Territory Management](#)—includes territories and related objects
- [Process Objects](#)—includes approval processes and related objects
- [Content Objects](#)—includes content and libraries and their related objects
- [Chatter Feed Objects](#)—includes objects related to feeds
- [Consent Management Objects](#)—includes consent, authorization form, and communication subscription objects
- [WDC Badge and Reward Objects](#)—includes badge and reward objects
- [WDC Feedback and Performance Cycle Objects](#)—includes feedback and performance cycle objects

Each ERD includes links to the topics that describe the fields in objects related to the diagram. The data model for your custom objects depends on what you create.

## Territory Management

**Note:** The original territory management feature is scheduled for retirement for all customers as of Summer '21. After the feature is retired, users can't access the original territory management feature and its underlying data. We encourage you to migrate to Enterprise Territory Management. We also strongly recommend that you keep a comprehensive backup of your territory data while you're still using the original territory management feature. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Diagram showing the relationships between the Chatter objects

The following diagram shows the relationships between the major Chatter objects.

- A feed item is an entry in the feed, such as a change to a record that's being followed, an updated post, or a user status change.
- All feed items have a `ParentId`, which is either:
  - a record
  - a user
  - a group
