

Section 1

Population

This section presents statistics on the growth, distribution, and characteristics of the U.S. population. The principal source of these data is the Bureau of the Census, which conducts a decennial census of population, a monthly population survey, a program of population estimates and projections, and a number of other periodic surveys relating to population characteristics. For a list of publications, see the Guide to Sources in Appendix IV.

Decennial censuses.—The U.S. Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of Members of the House of Representatives among the States. For over a century after the first census in 1790, the census organization was a temporary one, created only for each decennial census. In 1902, the Bureau of the Census was established as a permanent Federal agency, responsible for enumerating the population and also for compiling statistics on other subjects.

The census of population is a complete count. That is, an attempt is made to account for every person, for each person's residence, and for other characteristics (sex, age, family relationships, etc.). Since the 1940 census, however, some data have been obtained from representative samples of the population rather than from a complete count. In the 1980 census, two sampling rates were employed. For most of the country, one in every six households (about 17 percent) received the long form or sample questionnaire; in areas estimated to have fewer than 2,500 inhabitants, every other household (50 percent) received the sample questionnaire to enhance the reliability of sample data in small areas. Exact agreement is not to be expected between sample data and the complete census count. Sample data may be used with confidence where large numbers are involved and assumed to indicate patterns, trends, and relationships where small numbers are involved. Sample data from the 1980 census were not available in time for inclusion in this book.

Three different census counts for the resident population in 1970 are shown in the tables: 203,211,926; 203,235,298; and 203,302,031. The first is the initial tabulated count, the second is the official count, and the third contains the latest revisions. Breakdowns of the revised count of 203,302,031 are not available for demographic characteristics and may not be available for some levels of geography.

The data shown in this edition from the 1980 census are complete count data and are consistent with figures published in the 1980 census *Advance Reports*, series PHC80-V and the 1980 census *Supplementary Reports*, series PC80-S1. However, it is possible that questions being researched concerning census counts may result in corrections before the standard series of census reports are published. Any such corrections are expected to have only minimal impact on the data.

Reassessment of the evaluation studies of the 1970 census indicates a total net underenumeration of about 4.7 million persons, compared with 5.1 million in 1960. Among the persons who were not counted in 1970, about 2.9 million were White and about 1.9 million were Black. The overall rate of net underenumeration in 1970 was about 2.2 percent, compared with 2.7 percent in 1960 and 3.3 percent in 1950. Comparable estimates of net underenumeration for 1980 have not been completely developed. However, preliminary results indicate that overall coverage probably improved in the 1980 census and that the number of Blacks not counted dropped to about 1.3 to 1.5 million. Census data presented here have not been adjusted for underenumeration. See *Estimates of Coverage of Population by Sex, Race, and Age: Demographic Analysis*, PHC(E)-4, February 1974 for a discussion of the 1950, 1960, and original 1970 estimates and *Coverage of the National Population by Age, Sex, and Race in the 1980 Census: Preliminary Estimates by Demographic Analysis* (forthcoming) for the revised 1970 and preliminary 1980 coverage estimates.

In an attempt to estimate the extent of underenumeration in the 1970 census for areas within the United States, such as States, the Bureau has developed several alternative sets of estimates for each State. These estimates suggest variations in the extent of coverage by a number of factors (e.g., race). While the State data presented here are not adjusted for underenumeration, details concerning the Bureau's estimates for 1970 may be found in *Developmental Estimates of the Cover-*

age of the Population of the United States in the 1970 Census: Demographic Analysis, series P-23, No. 65. Estimates of the extent of underenumeration in the 1980 census for States are not yet available.

Current Population Survey (CPS).—This is a monthly nationwide survey of a scientifically selected sample representing, in most cases, the noninstitutional civilian population 14 years old and over. The sample is drawn from about 600 areas comprising approximately 1,100 counties and independent cities with coverage in every State and the District of Columbia and is subject to sampling error. At the present time (1981), about 71,000 housing units or other living quarters are designated for the sample at any time, of which about 58,000 are occupied by households eligible for interview; of these, in turn, about 4 to 5 percent are, for various reasons, unavailable for interview.

While the primary purpose of CPS is to obtain monthly statistics on the labor force, it also serves as a vehicle for inquiries on other subjects. Using CPS data, the Bureau issues a series of publications under the general title of Current Population Reports, which cover population characteristics (series P-20), consumer income (series P-60), special studies (series P-23), and other topics. Estimates of population characteristics based on the 1980 Current Population Survey will not agree with the counts from the 1980 census. The CPS estimates for 1980 shown in this edition are based on population controls from the 1970 census which have been updated for changes in the population since that time. In addition, the CPS and the 1980 census used different procedures for collecting and processing the data for racial groups and the Spanish origin population.

Population estimates and projections.—National population estimates are derived by use of decennial census data as benchmarks and of data available from various agencies as follows: Births and deaths (National Center for Health Statistics); immigrants (Immigration and Naturalization Service); Armed Forces (Department of Defense); net movement between Puerto Rico and the U.S. mainland (Puerto Rico Planning Board); and Federal employees abroad (Office of Personnel Management and Department of Defense). State estimates are based on similar data and also on a variety of data series, including school statistics from State departments of education and parochial school systems.

National population projections indicate the approximate future level and characteristics of the population under given assumptions as to future fertility, mortality, and net immigration. The method used to develop the projections involves preparation of projections of each of the components of population change—births, deaths, and net immigration—and the combination of these with July 1 estimates of the current population. Projections for States incorporate further assumptions about the redistribution of population as a consequence of migration.

Population estimates and projections are published in the P-25 and P-26 series of Current Population Reports. These estimates and projections are generally consistent with official decennial census figures and do not reflect the amount of estimated census underenumeration. For details on methodology, see the sources cited below the individual tables.

Standard Metropolitan Statistical Areas (SMSA) and Standard Consolidated Statistical Areas (SCSA).—The general concept of an SMSA is one of an integrated economic and social unit with a large population nucleus; SCOSA's are large metropolitan complexes consisting of groups of adjacent SMSA's. SMSA's and SCSA's are defined by the Office of Management and Budget (OMB). According to the rules for defining SMSA's, the entire territory of the United States is classified as metropolitan (inside SMSA's), or nonmetropolitan (outside SMSA's). SMSA's and SCSA's are defined in terms of entire counties except in New England, where the definitions are in terms of cities and towns. To summarize data for New England that are available only by counties, New England County Metropolitan Areas (NECMA's) have been developed as a convenience for data users. Periodically, new SMSA's may be created and the boundaries of others may change. As a result, data for SMSA's over time may not be comparable and the analysis of historical trends must be made cautiously. For descriptive details, tables showing changes in SMSA definitions, and a listing of area titles and components of each SMSA, SCSA, and NECMA, see Appendix II.

Urban and rural.—According to the 1980 census definition, the urban population comprises all persons living in (a) places of 2,500 or more inhabitants incorporated as cities, villages, boroughs (except in Alaska and New York), and towns (except in the New England States, New York, and Wisconsin), but excluding those persons living in the rural portions of extended cities (places with low population density in one or more large parts of their area); (b) census designated places (previously termed unincorporated) of 2,500 or more inhabitants; and (c) other territory, incorporated or unincorporated, included in urbanized areas. An urbanized area consists of a central city or a central core, together with contiguous closely settled territory, that combined have a total population of at least 50,000.

In censuses prior to 1950, the urban population comprised all persons living in incorporated places of 2,500 or more inhabitants and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density. To improve its measure of the urban population, the Bureau of the Census in 1950 adopted the concept of the urbanized area and delineated boundaries for unincorporated places. The 1950 definition has continued substantially un-

changed, except for minor modifications in 1960, the introduction of the extended city concept in 1970, and changes in the criteria for defining central cities in 1980 so as to permit urbanized areas to be defined for smaller centers. In all definitions, the population not classified as urban constitutes the rural population.

Residence.—In determining residence, the Bureau of the Census counts each person as an inhabitant of a usual place of residence (i.e., the place where one usually eats and sleeps). While this place is not necessarily a person's legal residence or voting residence, the use of these different bases of classification should produce the same results in the vast majority of cases.

Race and ancestry.—The 1980 census counts of the population by race and ethnic origin based on 100 percent tabulations, including the data shown in this edition, are provisional; that is, the counts are not final. Final data on race will be determined after sample data have been processed. The sample data will first appear in *Characteristics of the Population, General Social and Economic Characteristics*, PC80-1-C reports.

In the 1980 census, 15 groups were listed in the race item on the 1980 census questionnaire: White, Black, American Indian, Eskimo, Aleut, Chinese, Filipino, Japanese, Asian Indian, Korean, Vietnamese, Hawaiian, Samoan, Guamanian, and Other. The concept of race as used by the Census Bureau reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. Since the 1980 census obtained information on race through self-identification, the data represent self-classification by people according to the race with which they identify.

The 1980 population totals for "White" and "Other" are not comparable with corresponding figures from the 1970 census and previous censuses. The lack of comparability is due to changes in the way some respondents reported their race as well as changes in 1980 census procedures related to the racial classification. (For a fuller explanation, see the 1980 Census of Population *Supplementary Reports*, PC80-S1-3, *Race of the Population by States: 1980*.)

In 1980, if persons of mixed racial parentage could not provide a single response to the race question, the race of the person's mother was used; however, if a single response could not be provided for the mother, then the first race reported by the person was used. This is a modification of the 1970 census procedure in which the race of the person's father was used.

In the Current Population Survey (CPS) and other household sample surveys in which data are obtained through personal interview, respondents are asked to classify their race as 1) White, 2) Black, 3) American Indian, Aleut, or Eskimo, or 4) Asian or Pacific Islander. The procedures for classifying persons of mixed races who could not provide a single response to the race question are generally similar to those used in the 1980 census. For comments on comparability of 1980 CPS and census data, see section above on Current Population Survey.

In the 1980 census, the Bureau of the Census collected data on the Spanish origin population in the United States by using a self-identification question. Persons of Spanish/Hispanic origin or descent are those who classified themselves in one of the specific Spanish origin categories listed on the census questionnaire—Mexican, Puerto Rican, Cuban, or Other Spanish/Hispanic origin. The 1980 figures on Spanish origin are not directly comparable with 1970 census data on Spanish origin because of factors such as overall improvements in the 1980 census and improved question design. Also, it should be noted that persons of Spanish origin may be of any race.

In the November 1979 Current Population Survey, information on ancestry (ethnicity) was collected through personal interview. The ancestry question was open-ended (that is, no prelisted categories were provided) and was worded, "What is this person's ancestry?" In both the 1980 census and CPS, ancestry can be viewed as the nationality group, lineage, or country in which the person's parents or ancestors were born before their arrival in the United States. For comments on comparability of 1980 CPS and census data, see section above on Current Population Survey.

Nativity.—The native population consists of all persons born in the U.S., the Commonwealth of Puerto Rico, or an outlying area of the U.S. It also includes persons born at sea or in a foreign country who have at least one parent born in the U.S. All others are classified as "foreign born."

Mobility status.—The U.S. population is classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the survey or census and the place of residence at a specified earlier date. Nonmovers are all persons who were living in the same housing unit at the end of the period as at the beginning of the period. Movers are all persons who were living in a different housing unit in the U.S. at the end of the period from that in which they were living at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the U.S. at the beginning of the period, that is, in an outlying area under the jurisdiction of the U.S. or in a foreign country.

Living arrangement.—Living arrangements may be in households or in group quarters. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment or other group of rooms, or a single room that constitutes "separate living quarters." A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone or a group of unrelated persons sharing the same housing unit as partners is also counted as a household. See text, section 28, Construction and Housing, for definition of "housing unit."

All persons not living in households are classified as living in group quarters. These individuals may be institutionalized, e.g., under care or custody in juvenile facilities, jails, correctional centers, hospitals, or rest homes; or they may be residents in college dormitories, military barracks, rooming houses, etc. (see table 77).

Householder.—Beginning in 1980, the terms "householder" and "family householder" have been used in the presentation of data that had previously been presented with the designations "head of household" and "head of family". The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned or rented jointly by a married couple, either the husband or the wife may be listed first. Prior to 1980, the husband was always considered the household head (householder) in married-couple households.

Family.—The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together in a household. A family includes among its members the person or couple who maintains the household.

Subfamily.—Subfamilies are divided into "related" and "unrelated" subfamilies. A related subfamily consists of a married couple and their children, if any, or one parent with one or more unmarried children under 18 years old living in a household and related to the person or couple who maintains the household. Members of a related subfamily are also members of the family with whom they live. The number of related subfamilies, therefore, is not included in the number of families. An unrelated subfamily comprises two or more persons such as guests, lodgers, or resident employees and their relatives living in a household and related to each other but not to the person or couple who maintains the household.

Married couple.—A "married couple" is defined as a husband and wife living together in the same household, with or without children and other relatives.

Unrelated individuals.—"Unrelated individuals" refers to persons (other than inmates of institutions) who are not living with any relatives. A nonfamily householder is a householder living alone or with nonrelatives only. A secondary individual in a household is a person such as a guest, lodger, or resident employee who is not related to any other persons in the household. Persons in group quarters, except inmates of institutions, are classified as secondary individuals.

Average annual change.—In this section, average annual percent change is computed by the exponential or continuous-compounding method; see Guide to Tabular Presentation.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970*. See Appendix I.

Population and Area

5

No. 1. POPULATION AND AREA: 1790 TO 1980

[Area figures represent area on indicated date including in some cases considerable areas not then organized or settled, and not covered by the census. Area figures have been adjusted to bring them into agreement with remeasurements made in 1940. For additional area data, see tables 6 and 343.]

CENSUS DATE	RESIDENT POPULATION				AREA (square miles)		
	Number	Per square mile of land area	Increase over preceding census		Gross	Land	Water
			Number	Percent

Z. Less than .05 per 1,000 midyear population. ¹ For 1940-1980, includes overseas admissions into, less discharges from, Armed Forces and includes for all years "error of closure" (the amount necessary to make the components of change add to the net change between censuses), for which figures are not shown separately. ² Percent of population at beginning of period.

³ Adjusted for underregistration prior to April 1, 1970. ⁴ Prior to April 1, 1960, adjusted for underregistration of infant deaths.

Population Center—Coastal Shorelines

7

NO. 4. CENTER OF POPULATION: 1790 TO 1980

[“Center of population” is that point at which an imaginary flat, weightless, and rigid map of the United States would balance if weights of identical value were placed on it so that each weight represented the location of one person on the date of the census]

YEAR ¹	North latitude	West longitude	Approximate location
1790 (Aug. 2).....	39° 16' 30"	76° 11' 12"	23 miles east of Baltimore, Md.
1850 (June 1).....	38° 59' 0"	81° 19' 0"	23 miles southeast of Parkersburg, W. Va.
1900 (June 1).....	39° 9' 36"	85° 48' 54"	6 miles southeast of Columbus, Ind.
1950 (Apr. 1).....	38° 50' 21"	88° 9' 33"	8 miles north-northwest of Olney, Richland County, Ill.
1960 (Apr. 1).....	38° 35' 58"	89° 12' 35"	In Clinton Co. about 6½ miles northwest of Centralia, Ill.
1970 (Apr. 1).....	38° 27' 47"	89° 42' 22"	5.3 miles east-southeast of the Mascoutah City Hall in St. Clair County, Ill.
1980 (Apr. 1).....	38° 8' 13"	90° 34' 26"	1 mile west of the Desoto City Hall in Jefferson County, Mo.

¹ For dates of admissions of the States and changes in areal definition, see “State Origins and Boundaries,” *United States Summary, U.S. Census of Population: 1960*, vol. I. For year of admission to statehood, see table 342.

NO. 5. RESIDENT POPULATION AND POPULATION DENSITY IN COUNTIES WITHIN 50 MILES OF COASTAL SHORELINES: 1940 TO 1978

[1940-1970, as of April 1 and based on census data. 1978 as of July 1 and based on estimates developed for Federal revenue-sharing allocation; for details, see *Current Population Reports*, series P-25, No. 699. Excludes Alaska and Hawaii. Covers 611 counties and independent cities which are entirely or substantially within 50 miles of U.S. coastal shorelines. Great Lakes region includes St. Lawrence River.]

— Represents zero. NA Not available. X Not applicable. Z Less than .5 square miles. ¹ Puerto Rico was ceded to the United States by Spain in 1898. On July 25, 1952, pursuant to acts of Congress, it achieved the political status of the Commonwealth of Puerto Rico. ² Includes population of Canal Zone (1960, 42,122; 1970, 44,198) and, for 1980 only, Corn Islands (1,872), not shown separately. Due to treaty of 1978 with Republic of Panama, U.S. jurisdiction over Canal Zone ended Oct. 1, 1979. Lease of Corn Islands from Republic of Nicaragua was terminated in 1971. ³ Includes population of Swan Islands (1960, 28; 1970, 22), not shown separately. Pursuant to treaty in 1972, jurisdiction of the Swan Islands was transferred to Honduras. ⁴ Preliminary. ⁵ 1970 data. ⁶ Enderbury Island uninhabited. Canton Island uninhabited in 1970 and 1980. ⁷ Includes Johnston Island and Sand Island. Sand Island uninhabited at time of enumeration. ⁸ Area is for Navassa (2 square miles), Baker, Howland, and Jarvis (3 square miles), and Palmyra (4 square miles); uninhabited at time of enumeration. ⁹ Administered by United States since July 18, 1947, under United Nations Trusteeship system. ¹⁰ Data for Northern Mariana Islands included in Trust Territory of the Pacific Islands. ¹¹ Census of 1958 conducted by the Office of High Commissioner, Trust Territory of the Pacific Islands. ¹² Comprises land area only.

¹³ Excludes U.S. citizens temporarily abroad on private business, travel, etc. Such persons were enumerated at their usual place of residence in the United States as absent members of their own households. ¹⁴ Based partially on tabulations provided by Department of Defense. ¹⁵ Based on data supplied by U.S. Office of Personnel Management. ¹⁶ Represents U.S. citizens abroad for extended periods. Since this population was enumerated on a voluntary basis, its coverage is probably less complete than that of other categories of Americans abroad.

¹For U.S., population of U.S. has been divided by total land area. For each State and Puerto Rico, population at given census has been divided by land area as then constituted.

Geographic Distribution

11

AND DENSITY—STATES AND PUERTO RICO: 1920 TO 1980

years is that of present area of State; for area figures of States, see table 342. Minus sign (--) denotes decrease. For series A 172, for population by regions, and A 195-198 for population, sex, and density by States]

Population

No. 23. LARGE METROPOLITAN AREAS—POPULATION, 1960 TO 1980, AND HOUSEHOLDS, 1980

[As of April 1. Covers 172 standard metropolitan statistical areas (SMSA's) with populations of 200,000 or more and 17 standard consolidated statistical areas (SCSA's) as defined by the Executive Office of the President, Office of Management and Budget. Figures for 1970 include corrections. Rank based on unrounded figures. For definitions and components of SMSA's and SCSA's, see Appendix II. Minus sign (—) reflects decrease]

Population

No. 79. RELIGIOUS BODIES—SELECTED DATA

(Represents latest information available from religious bodies with memberships of 50,000 or more; excludes a few groups giving no data. Not all groups follow same calendar year nor count membership in same way; some groups give only approximate figures. Roman Catholics count all baptized persons, including infants; Jewish statistics are estimates of the number of individuals living in households in which one or more Jews reside, less 8 percent for non-Jews residing in these households; Eastern Orthodox Churches include all persons in their nationality or cultural groups; most Protestant bodies count only persons who have attained full membership, and previous estimates have indicated that all but a small minority of these are over 13 years of age; however, many Lutheran bodies and The Episcopal Church now report all baptized persons, and not only those confirmed. Data which appear in italics are "noncurrent," i.e., they are reported for 1978 or earlier. All other data are "current" and were reported in 1979 or 1980]

Section 2

Vital Statistics

This section presents vital statistics—data on births; deaths; abortions; fetal deaths, including stillbirths; fertility; life expectancy; marriages; and divorces. Vital statistics are compiled for the country as a whole by the National Center for Health Statistics (NCHS) and published in its annual report, *Vital Statistics of the United States*, in certain reports of the *Vital and Health Statistics* series, and in the *Monthly Vital Statistics Report*. Reports in this field are also issued by the various State bureaus of vital statistics. Data on fertility, on age of persons at first marriage, and on marital status and marital history are compiled by the Bureau of the Census from its Current Population Survey (CPS; see text, p. 1) and published in *Current Population Reports*, series P-20.

Registration of vital events.—The registration of births, deaths, fetal deaths, and other vital events in the United States is primarily a State and local function. The civil laws of every State provide for a continuous and permanent birth- and death-registration system. Many States also provide for marriage- and divorce-registration systems. Vital events occurring to U.S. residents outside the United States are not included in the data.

Births and deaths.—The live-birth, death, and fetal-death statistics prepared by NCHS are based on copies of vital records received from registration offices of all States, of certain cities, and of the District of Columbia. The annual collection of death statistics on a national basis began in 1900 with a national death-registration area of 10 States and the District of Columbia; a similar annual collection of birth statistics for a national birth-registration area began in 1915, also with 10 reporting States and the District of Columbia. Since 1933, the birth- and death-registration areas have comprised the entire United States, including Alaska (beginning 1959) and Hawaii (beginning 1960). National statistics on fetal deaths were first compiled for 1918 and annually since 1922.

Prior to 1951, birth statistics came from a complete count of records received in the Public Health Service (now received in NCHS). From 1951 through 1971, they were based on a 50-percent sample of all registered births (except for a complete count in 1955 and a 20- to 50-percent sample in 1967). Beginning in 1972, they have been based on a complete count for States in the Cooperative Health Statistics System (for details, see the technical appendix in *Vital Statistics of the United States*) and on a 50-percent sample of all other areas. Mortality data have been based on a complete count of records for each area (except for a 50-percent sample in 1972). Beginning in 1970, births to, and deaths of nonresident aliens of the United States and U.S. citizens outside the United States have been excluded from the data. Fetal deaths and deaths among Armed Forces abroad are excluded. Data based on samples are subject to sampling error; for details, see annual issues of *Vital Statistics of the United States*.

Mortality statistics by cause of death are compiled in accordance with World Health Organization regulations according to the *International Classification of Diseases* (ICD). The ICD is revised approximately every 10 years. The eighth revision of the ICD, in use for the latest data shown here, was employed from 1968 to 1978. In January 1979, the ninth revision was put in use. Each revision of the ICD introduces a number of discontinuities in mortality statistics; for a discussion of those between the seventh and eighth revisions of the ICD, see *Vital and Health Statistics*, series 2, No. 66.

Fertility and life expectancy.—The total fertility rate, defined as the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified year, is compiled and published by NCHS. Other data relating to social and medical factors which affect fertility rates, such as contraceptive use and birth expectations, are collected and made available by both NCHS and the Bureau of the Census. NCHS figures are

based on information in birth and fetal death certificates and on the 1973 and 1976 National Surveys of Family Growth; Bureau of the Census data are based on decennial censuses and the CPS.

Data on life expectancy, the average remaining lifetime in years for persons who attain a given age, are computed and published by NCHS. For details, see the technical appendix in *Vital Statistics of the United States*.

Marriage and divorce.—The compilation of nationwide statistics on marriages and divorces in the United States began in 1887–1888 when the National Office of Vital Statistics prepared estimates for the years 1867–1886. Although periodic updates took place after 1888, marriage and divorce statistics were not collected and published annually until 1944 by that Office. In 1957 and 1958, respectively, the same Office established marriage- and divorce-registration areas. Beginning in 1957, the marriage-registration area comprised 30 States, plus Alaska, Hawaii, Puerto Rico, and the Virgin Islands; by 1978 it also included nine additional States and the District of Columbia. The divorce-registration area, starting in 1958 with 14 States, Alaska, Hawaii, and the Virgin Islands, included by 1979 a total of 30 States and the Virgin Islands. Procedures for estimating the number of marriages and divorces in the registration States are discussed in *Vital Statistics of the United States*, vol. III—*Marriage and Divorce*. Data for nonregistration States are gathered mainly by collecting already summarized data on marriages and divorces reported by nonregistration State offices of vital statistics and by county offices of registration.

Another important source of data on marriage and divorce trends in the United States is the Current Population Survey conducted monthly by the Bureau of the Census. For further details, see text, p. 1.

Vital statistics rates.—Vital statistics rates computed by NCHS are based on decennial census population figures as of April 15, 1910; January 1, 1920; and April 1 for 1930, 1940, 1950, 1960, and 1970; and on midyear population figures for other years, as estimated by the Bureau of the Census (see text, p. 2).

Race.—Data by race for births, deaths, marriages, and divorces from NCHS are based on information contained in the certificates of registration. In NCHS's National Survey of Family Growth and the Census Bureau's Current Population Survey, race is determined by interviewer observation.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling procedures, and measures of statistical reliability applicable to Census Bureau and NCHS data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970*. See Appendix I.

NA Not available. ¹ Through 1955, adjusted for underregistration. ² Infants under 1 year, excluding fetal deaths; rates per 1,000 registered live births. ³ Includes estimates for some States through 1969 and also for 1976, and marriage licenses for some States for all years except 1973 and 1975. ⁴ Includes reported annulments and some estimated State figures for all years. ⁵ Includes 37,462 nonlicensed marriages registered in California for 1978, 41,961 for 1979, and 46,001 for 1980.

No. 84. TOTAL FERTILITY RATE AND INTRINSIC RATE OF NATURAL INCREASE: 1940 TO 1979

[Excludes Alaska prior to 1959 and Hawaii prior to 1960. Prior to 1960, based on births adjusted for underregistration; thereafter, registered births only. Beginning 1970, excludes births to nonresidents of United States. The total fertility rate is the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified year. A total fertility rate of 2,110 represents "replacement level" fertility for the total population under current mortality conditions (assuming no net immigration). The intrinsic rate of natural increase is the rate that would eventually prevail if a population were to experience, at each year of age, the birth rates and death rates occurring in the specified year and if those rates remained unchanged over a long period of time. Minus sign (--) denotes decrease. See also Appendix III and *Historical Statistics, Colonial Times to 1970*, Series B 11]

NO. 104. LEGAL ABORTIONS—NUMBER, RATE PER 1,000 WOMEN 15–44 YEARS OLD, AND ABORTION/LIVE BIRTHS RATIO, BY STATE OF OCCURRENCE: 1973 TO 1978

[Numbers of legal abortions are from two surveys of hospitals, clinics, and physicians identified as providers of abortion services, conducted by the Alan Guttmacher Institute. Abortion rates are computed per 1,000 women 15–44 years of age on July 1 of specified year; abortion ratios are computed as the number of abortions per 1,000 live births from July 1, 1973, to June 30, 1974, from July 1, 1975, to June 30, 1976, from July 1, 1977, to June 30, 1978, and from July 1, 1978 to June 30, 1979, respectively, by State of occurrence.]

NO. 108. DEATHS AND DEATH RATES, BY SEX AND RACE: 1950 TO 1979

[Rates are per 1,000 population for specified groups. 1950 excludes Alaska and Hawaii. Beginning 1970, excludes deaths of nonresidents of the U.S. Excludes fetal deaths. See Appendix III. Rates based on enumerated population as of Apr. 1 for 1950, 1960, and 1970, and July 1 estimates for other years. See text, p. 55. See also *Historical Statistics, Colonial Times to 1970*, series B 167-173 and B 181-192.]

No. 113. DEATH RATES, 1960 TO 1978, AND DEATHS, 1970 TO 1978, FROM SELECTED CAUSES

[Beginning 1970, excludes deaths of nonresidents of the U.S. Age-adjusted death rates were prepared using the direct method, in which age-specific death rates for a population of interest are applied to a standard population distributed by age. The standard population for this table is the total population of the United States enumerated in 1940. Age adjustment eliminates the differences in observed rates between points in time or among compared population groups that result from age differences in population composition. For 1960, causes of death classified according to seventh revision of *International Classification of Diseases*; beginning 1970, to eighth revision. See also Appendix III and *Historical Statistics, Colonial Times to 1970*, series B149-166.]

**NO. 115. DEATHS FROM SELECTED CAUSES FOR SELECTED COUNTRIES—AGE-ADJUSTED RATES:
1970 TO 1979**

[Deaths per 100,000 population. For explanation of age-adjustment, see headnote, table 113. The standard population for this table is based on the sum of male and female population of 46 countries for which the source published causes of death statistics in 1950. Causes of death are classified according to eighth revision of the *International Classification of Diseases*.]
