## **2015-2016 Facilities Condition Report**

### **Page**

**2.....Facilities Inventory**

**4.....Condition of Agency 207 E&G Facilities**

**6.....Resources for Maintenance and Repair of Agency 207 E&G Facilities**

## **Appendices**

**A.....Facilities with Agency 207 Educational and General (E&G) Data**

**B.....Facilities with Agency 207 Auxiliary Data**

**C.....Facilities with Agency 209 Data**

**D..... Agency 246 University of Virginia's College at Wise Data**

## FACILITIES INVENTORY

The University of Virginia (UVA) facilities portfolio includes 556 buildings and corresponding infrastructure, encompassing seventeen million gross square feet of building space, with a conservatively estimated replacement value of 4.9 billion dollars. The facilities portfolio constitutes a significant portion of the total assets held by the University. This report offers a maintenance condition synopsis for these assets and a discussion of the on-going reinvestment needed to assure their continued usefulness.

For administrative and budget purposes, the University’s main Grounds in Charlottesville consist of Agency 207 and Agency 209. Agency 207 is subdivided into two operational categories: Educational and General (E&G), and Auxiliary. The following items should be considered when discussing these categories:

1. Agency 207 E&G refers to the academic division of the University that is partially supported by general funds allocated by the Commonwealth. This includes the Medical School, Nursing School, and Health Science Center Library.
2. Agency 207 Auxiliary spaces are assigned to organizations that are self-supporting, such as the Housing and Athletic departments. These organizations receive no general fund support.
3. Agency 209 is the patient care portion of the University’s Health Systems division.

The UVA Facilities Management (FM) staff prepares this report on an annual basis. The FM staff has direct access to the inspection and cost data for Agency 207 E&G facilities. Facilities data for Agency 207 Auxiliaries and Agency 209 has been provided by their respective administrators. The facilities data for Agency 246, the University of Virginia’s College at Wise, is not included in the body of this report; however, the data is provided by the college’s administration and can be found in Appendix D.

Table 1 below shows the number of buildings, gross square feet, and replacement value of the buildings and infrastructure maintained by Agency 207 and Agency 209.

Table 1- Inventory

	Number of Buildings*	Gross Square Feet**	Replacement Value***
Agency 207 E&G	305	7,400,786	\$2,747,945,670
Agency 207 Auxiliary	213	6,234,799	\$1,191,663,602
Agency 209	38	3,648,426	\$966,293,867
Total	556	17,284,011	\$4,905,903,139

\* Some buildings consist of more than one agency. For the purposes of this report, each building is counted once and each building is assigned to the category that has the majority of space in that building.  
 \*\* Calculated based on the percentage of financial responsibility in each building.  
 \*\*\* Calculated based on the percentage of financial responsibility in each building or infrastructure component.

## Replacement Value

The term “replacement value” has a long and varied history of use in the type of analysis contained in this report. A logical assumption is that “replacement value” means the total cost to replace a building if it has to be completely rebuilt. However, for this report, when “replacement value” is used, it refers to *the value of those building’s components that an organization is obligated to maintain*. It may be clearer to think of this as the asset’s total maintenance value. For newly constructed and renovated facilities, replacement value refers to a portion of the total amount that would be needed to actually build or replace the facility, specifically the construction cost. Replacement value does not include additional costs for line items such as architectural fees, project management fees, and furnishings; nor does it include the cost of adapting a building to changing occupant needs, building codes, or fire and life safety requirements.

## Infrastructure

Facilities Management maintains many assets that are not buildings, such as sidewalks, roads, curbs, steam tunnels, sewer and water lines, buried electrical lines, and light poles. In fact, the infrastructure assets account for \$799,050,762 of the total replacement value shown in Table 1.

During the past five fiscal years, efforts were made to better assess and document the infrastructure. This provided an initial assessment of maintenance needs on a system by system basis found throughout the infrastructure as well as a more accurate total replacement value. The Geographic Information System (GIS) was used to measure the length and size of steam tunnels, sidewalks, roads, electrical and steam utilities, storm and sanitary piping, and domestic water lines. Current construction and material costs were then used to determine a value. Deficiencies were reviewed by researching the Energy and Utilities Master Plan reports, detailed interviews with Energy and Utilities staff and visual inspections where OSHA regulations allowed. Current construction and material costs were used to determine the cost of these deficiencies. An updated Energy and Utilities Master Plan was completed at the close of the last fiscal year. The information from this assessment is currently being used to validate and improve the accuracy of the infrastructure values. This new information will be included in next fiscal year’s report.

## Age

Generally speaking, as the age of a building or infrastructure component increases, so does the maintenance demand. Although some components of a building can last for many decades, such as the foundation, framing, and exterior walls; the average life span of most electrical, mechanical, and roofing systems is between twenty-five and thirty-five years.

Of the 305 buildings assigned to Agency 207 E&G, 221 (73%) are more than 30 years old. For Agency 207 E&G facilities, the average age is 72 years, the median age is 56 years, and the weighted age is 58.1 years, where weighted age assigns more weight to larger facilities.

## **CONDITION OF AGENCY 207 E&G FACILITIES**

### Maintenance Backlog

Facilities Management gathers information about the maintenance needs of the Agency 207 E&G buildings by performing facility condition assessments. The goal is to inspect E&G buildings once every four years. The assessments result in a number of immediate repairs. They also document repairs that are needed at the time of the inspection but cannot be undertaken at that time due to funding or other constraints. These deferred maintenance items become the maintenance backlog for that building. It is important to distinguish between what a facility may need in terms of maintenance, and what it may need in terms of adaptation or modernization. The maintenance backlog represents the estimated amount of money needed to restore deteriorating components to their original operating condition. In many cases, restoring components to their original operating condition will fall short of today's standards for function and/or aesthetics; therefore, the cost to fully renovate or modernize a building is usually many times greater than the cost of the deferred maintenance in the building

### Cost Estimates

The maintenance backlog for a building represents the total cost to repair the maintenance deficiencies documented in the facility condition assessment. Many major repairs cannot be accurately estimated until considerable money is spent on research and design. Money is not invested in this level of estimating unless a project is funded for accomplishment. The estimated costs that make up the backlog are order of magnitude figures, intended to be sufficiently accurate in reflecting the magnitude of the repairs needed for a particular building.

### The Facility Condition Index

The Facility Condition Index (FCI) is a simple and widely accepted measure used to indicate the relative condition of a building. It is calculated by dividing the value of the maintenance backlog in a building by the replacement value of the building and showing the result as a percentage. For example, a building with a replacement value of \$5,000,000 that contains a \$100,000 maintenance backlog has an FCI of two percent. By comparison, a building with a replacement value of \$1,000,000 that also has a \$100,000 backlog is in relatively worse condition. The FCI for that building is 10 percent. Recognized industry benchmarks assume that a building with a FCI of 5 percent or less is in good condition.

Over the past fiscal year, many large scale projects were completed which produced a positive effect on the overall E&G FCI percentage. Some examples of these projects include the Clinical Dept. Wing and Pavilion VII roof replacements, Materials Science and Chemical Engineering passenger elevator modernization, Harrison Special Collections humidification modification, and the Patterson Alley storm water drainage project. Also, the Rotunda renovation entered its final stages this past year, which increased the E&G replacement value

and reduced the maintenance backlog. This facility now has no known deficiencies and has been fully modernized.

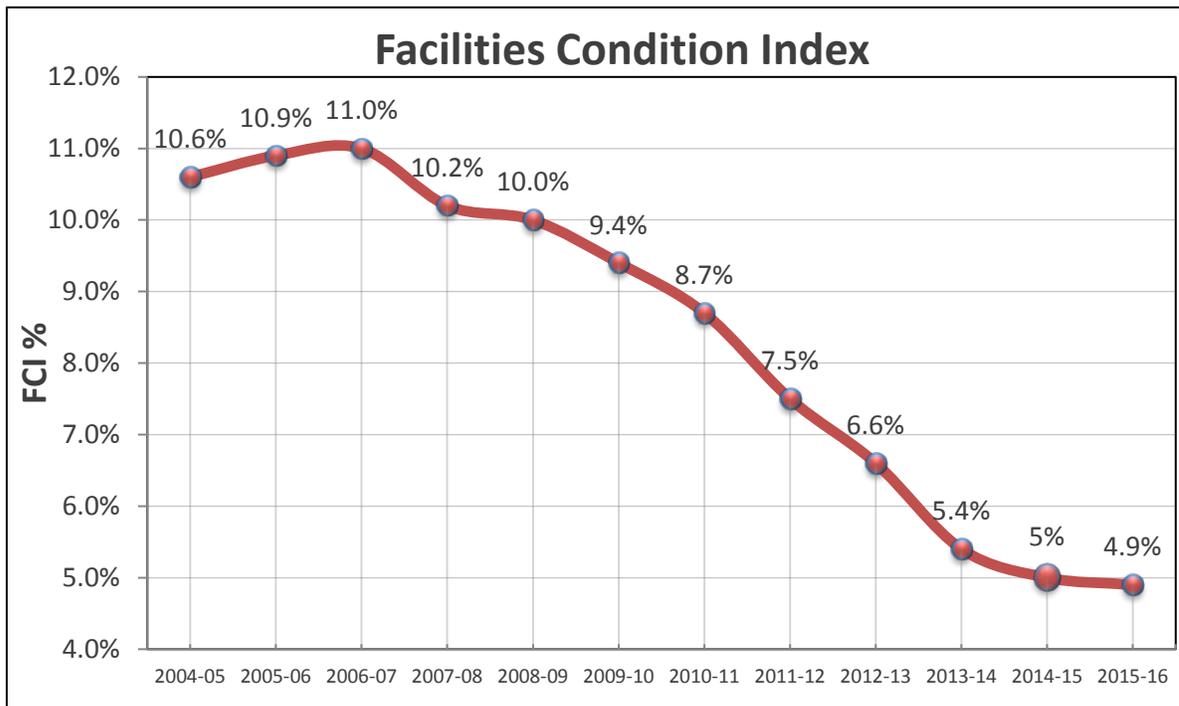

Table 2 – 2015-2016 E&G FCI%

E&G Total Replacement Value*	E&G Total Maintenance Backlog**	E&G Overall FCI***	E&G Buildings with FCI of 5% or Higher
\$2,747,945,670	\$133,885,050	4.9%	19%

- \* Calculated as the total value of each building (or infrastructure component) multiplied by the percent of financial responsibilities for Agency 207 E&G.
- \*\* Calculated as the total cost of all deficiencies in each building (or infrastructure component) multiplied by the percent financial responsibilities for Agency 207 E&G.
- \*\*\* Calculated by dividing the value of the deficiencies in the Maintenance Backlog by the replacement value.

The achievement created in the last eleven years would not have been possible without the transformational support, planning, and funding commitments of the BOV. Through this support, along with the investments made in maintenance operations, maintenance reserve and major capital renewals, the Deferred Maintenance Program achieved its goal of a 5 percent FCI, as of June 30, 2015. The program will continue to strive to maintain the University’s facilities good condition through the combination of maintenance reinvestment and whole building capital renewals.

The following chart illustrates the progress made by the Deferred Maintenance Program in regards to achieving the goal of a 5 percent FCI by fiscal year 2015.

## **RESOURCES FOR MAINTENANCE AND REPAIR OF AGENCY 207 E&G FACILITIES**

This report captures the financial resources for the maintenance of the University's E&G facilities from three principal sources: Maintenance Operating Budget, the Board of Visitors (BOV), and Maintenance Reserve funding. Additionally, the correction of maintenance items are accomplished through larger projects funded by capital outlay or private fund sources. Though not captured here, these complementary resources are essential to achieving and maintaining a 5 percent FCI.

### Maintenance Operating Budget

Funding for preventive and routine maintenance in support of Agency 207 E&G is provided through the University's annual operating budget. Funding for maintenance of the utility infrastructure is provided by a component of utilities rates charged to each user of these services. Resources expended through the maintenance operating budget for Agency 207 E&G for the 2015-2016 fiscal year totaled \$32,055,133. This figure includes operating maintenance funding for both Law and Darden.

### Board of Visitors

Beginning with the 2005-2006 fiscal year, the University's Board of Visitors made available a special allocation of funds for deferred maintenance projects. When the initiative began, the plan was to incrementally increase annual funding to a budgeted target maintenance reinvestment rate of 2%. Further detail on the Maintenance Reinvestment Rate is found below. During the last fiscal year \$10,929,830 was expended from the BOV deferred maintenance account.

### Maintenance Reserve Funding

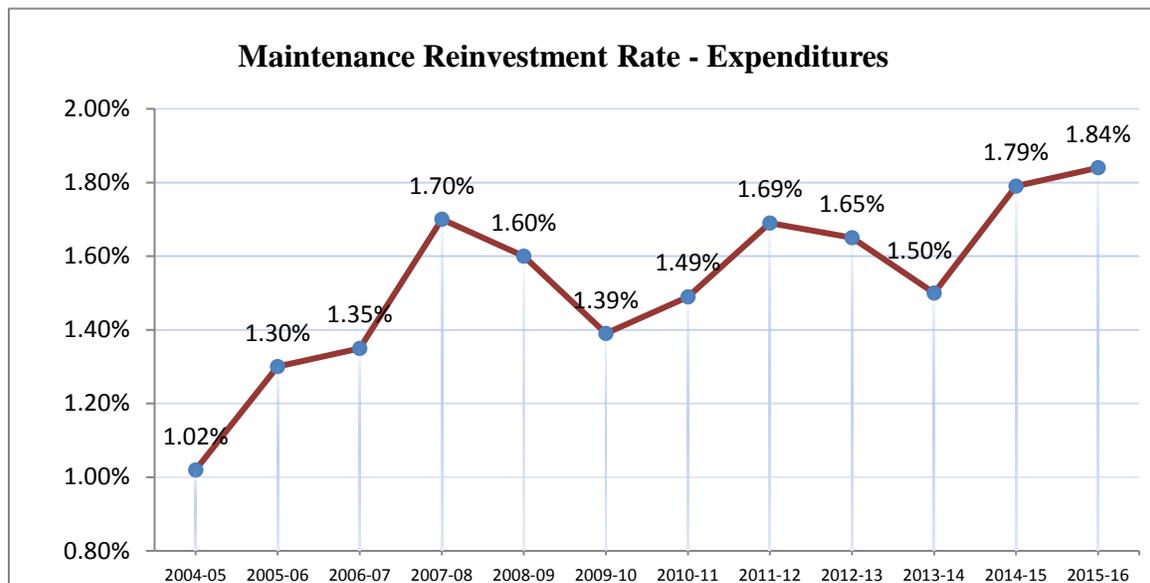

Maintenance Reserve is a component of the Commonwealth's capital outlay budget appropriated by the General Assembly each biennium. Initiated in the 1982-84 biennium, Maintenance Reserve acknowledges the need of an on-going financial commitment to address deferred maintenance needs within state facilities. Maintenance Reserve is intended to fund major repairs costing between \$25,000 and \$1,500,000 each. A total of \$7,709,892 was spent from this account in the last fiscal year. Maintenance Reserve funds address the deterioration of building systems, thus extending the useful life of a facility. Today, Maintenance Reserve funds, combined with capital renewals, play a crucial role in the management and reduction of UVa's deferred maintenance backlog. Note that the State allocation of Maintenance Reserve funds are not available for Agency 209 and Agency 207 Auxiliaries, and a small number of Agency 207 facilities.

### Maintenance Reinvestment Rate

The ratio of the building maintenance expenditures to the total replacement value is known as the maintenance reinvestment rate. The total amount spent on building maintenance can be calculated by combining the amounts spent from the operating budget, the BOV funds, and Maintenance Reserve. For 2015-2016, the figure for Agency 207 E&G was \$50,694,855.

These expenditures represented 1.84 percent of the replacement value of the E&G buildings and infrastructure. Various authorities cite a range between 1.5 percent and 4 percent as the reinvestment rate necessary to prevent the growth of a deferred maintenance backlog and lessen the impact of rising inflation costs. Given the age of many of the University's buildings and the substantial amount of deferred maintenance already accumulated, a reinvestment rate of 2 percent is warranted. To this end, when newly constructed E&G facilities come online, 2 percent of the building's construction cost is allocated to the annual maintenance operations budget.

The following chart illustrates the progress made towards reaching the goal of a 2% Maintenance Reinvestment Rate (MRR) as represented by total expenditures. The MRR in some university publications shows the total budgeted amount allocated to the Deferred Maintenance program. This report's focus is what was expended during the fiscal year and its effect on both the maintenance back log and the overall FCI%.

### Capital Budget

Many older buildings need considerable renovation work to make them compatible with contemporary building and life safety codes, as well as current research and teaching standards. In addition to the renovations done during these projects, many long-standing maintenance and repair needs are also corrected in the course of the work. For this reason, capital renewal projects are a valuable resource to fund the correction of maintenance deficiencies in existing buildings.

### Gift and Grant Funding

Gift funding has been a significant source of financial support for the restoration and preservation of the University's Jeffersonian buildings and grounds. Resources have primarily been developed through the activities of the Jeffersonian Restoration Design Committee.

## Summary

In 2005-06, the Board of Visitors embarked on a long-term plan to reduce the deferred maintenance backlog of E&G facilities and the corresponding FCI to 5 percent or less. The Board also took steps to establish adequate annual maintenance funding to prevent the further accumulation of deferred maintenance. Today the FCI is 4.9 percent, which is in the “good” category by industry standards. The FCI has shown a noteworthy improvement since 2004-05, when the Report on the Condition of University Facilities reported the E&G FCI to be 10.6 percent. The University has made continual progress in its investments through maintenance operations, Maintenance Reserve and BOV funding that have improved the maintenance reinvestment rate, a rate that was 1.02 percent in 2005-06 and is now 1.82 percent.
