

Cardano  
Foundation

Project  
**Catalyst**

Fund 13

Cardano Foundation's  
**Project Catalyst**  
**F13 Participation**

## Introduction

The Cardano Foundation implemented a novel, multi-layered approach to guide proposal evaluation and voting for Project Catalyst F13. A group of internal subject matter experts, comprising approximately **30 Foundation** staff members, filtered over **1,800** proposals. During the selection process, these individuals considered both the Foundation's objectives and those of the broader Cardano ecosystem, reflecting the ethos and principles of [Our Cardano](#). This rigorous process detailed distinct roles and responsibilities to ensure a comprehensive and balanced evaluation:

- **Champions:** Create a preliminary selection of proposals across one or more categories based on their subject matter expertise.
- **Contrarians:** Provide a critical perspective, challenge assumptions, and identify potential risks in the initial selection the Champions generate.
- **Executive Committee:** Conducts a final review and approval of the Foundation voting shortlist generated by the Champions and Contrarians.

These roles and their progressive stages enabled a robust evaluation process, promoting transparency and accountability during the subsequent allocation of **180 million ada** in voting stake towards proposal selection.

## Guidelines

The following criteria guided the Foundation's comprehensive assessment of Project Catalyst F13 proposals:

- **Measurable Impact:** Demonstrated on-chain or off-chain impact aligned with the Foundation's core focus areas.
- **Enterprise Adoption:** Solutions targeting enterprise adoption in authenticity, sustainability, and traceability.
- **Developer Ecosystem:** Enhancements to Cardano developer tooling and infrastructure.
- **Open-Source Commitment:** A strong commitment to open-source principles.
- **Proven Track Record:** Teams with a demonstrated history of delivering valuable tools for the Cardano ecosystem, particularly those with prior Catalyst funding.
- **Audits:** Proposals incorporating technical audits undergo a case-by-case assessment.

This rigorous evaluation framework ensures that funded proposals contribute meaningfully to the Cardano ecosystem and advance our shared goals. There was a significant difference between the volume and ada value of proposals submitted in general categories compared with proposals submitted in the Cardano Partner category. This required a dedicated filtering procedure for each of these groups of proposals.

## Filtering Procedure: General Categories

The large volume of 1,732 proposals in the Concept, Developers, Ecosystem, and Product categories was filtered down to a final selection of 170 in these general categories.

### Step 1: Champions (Coarse Acceptance or Rejection)

- **Proposal Distribution:** Proposals within each category are randomly assigned to Champions with relevant subject matter expertise. Champions disclose any potential conflicts of interest.
- **Initial Screening:** Champions conduct an initial screening of assigned proposals, categorizing them as:
  - (A) Promising: Worthy of a full review.
  - (B) Potential: May be reviewed if resources allow.
  - (C) Rejected: Does not warrant further consideration.
- **In-depth Evaluation:** Champions conduct a comprehensive review of “A” proposals (and “B” proposals if resources allow) using a scoring rubric aligned with predefined guidelines.
- **Collaborative Review:** Champions can comment on all proposals, fostering collaboration and leveraging diverse expertise within the review team.

### Step 2: Contrarians (Specific Rejection)

- **Proposal Aggregation and Assignment:** Reviewed proposals in each category are aggregated and equally assigned to Contrarians.
- **Comprehensive Review:** If the Champion completed only an initial screening due to resource constraints, the Contrarian conducts a full review based on established guidelines.
- **Risk Assessment and Feedback:** Contrarians scrutinize proposals, assessing potential risks and alignment with guidelines. Each proposal receives a ranking:
  - (1) Go: Proceed with the proposal.
  - (2) Risky: Proceed with caution, addressing identified concerns.
  - (3) No-Go: Do not proceed with the proposal.

Contrarians provide written feedback for proposals ranked “Risky” and “No-Go.”

- **Collaborative Dialogue:** Champions are encouraged to engage with Contrarians to discuss concerns and advocate for their proposals if they choose. A third individual will review any proposals still deadlocked after the discussions between Champions and Contrarians.

### Step 3: Executive Committee (Final Selection)

- **Asynchronous Assessment:** All proposals ranked that make it through the last step undergo an asynchronous assessment by the Executive Committee. Based on their evaluation, the Committee may validate the ranking, remove the proposal(s), or promote other proposals that did not pass Champion and Contrarian reviews to replace removed proposals.
- **Final Decision:** The Executive Committee convenes to make a final decision on the Cardano Foundation’s F13 proposal selection.
- **Budgetary Constraints:** The total Catalyst funding requested by selected proposals within each category will not exceed the allocated Catalyst budget by more than 20%.

## Filtering Procedure: Partner Categories

97 proposals in the Cardano Partner categories of Enterprise and Growth were filtered down to a final selection of 15.

The Foundation participates in a shortlisting panel for the Partner categories alongside representatives from the genesis entities, Intersect, and the ecosystem.

1. **Due Diligence:** The Catalyst team conducts due diligence on partner category proposals to verify their adherence to eligibility criteria.
2. **Parallel Evaluation:** Concurrently, the Cardano Foundation employs its established multi-stage review process (Champion Review, Contrarian Review, Executive Committee Assessment) as applied to general category proposals. This selection remains subject to adjustments based on the findings of the Catalyst team's due diligence.
3. **Executive Committee Review:** The Executive Committee reviews selected Partner category proposals, ensuring alignment with strategic priorities.
4. **Partner Category Shortlisting:** The Catalyst team assembles a selection committee comprising representatives from the Catalyst Operator, Cardano Foundation, Emurgo, Intersect, and community members to shortlist proposals within the partner categories. The Cardano Foundation actively advocates for the inclusion of proposals from its shortlist.
5. **Final Selection:** The shortlist is refined based on the selection committee's decisions. The Executive Committee is informed of removed proposals and convenes a meeting to finalize the Cardano Foundation's F13 proposal selection across all categories.

This collaborative approach ensures a rigorous and balanced evaluation of all proposals, promoting transparency and accountability in funding allocation.

## Data on Proposals Selected

Category	# of proposals reviewed	Catalyst funds available	Proposals selected for CF Vote	Amount requested by selected proposals	% of proposals in category	% of category budget voted
Concept	483	₺5,000,000.00	45	₺5,419,570	9%	108%
Developers	370	₺8,000,000.00	46	₺6,759,556	12%	84%
