X

B doesn't suppose

X

D seems

(circled)

Submit

# Reading Comprehension

## Question

Do you ever feel like hours of your life are spent solely on your phone? Particularly, social media? Well, technically, you're not completely to blame. You're probably just addicted to the biological responses that companies have worked hard to make sure you have when using their apps.

The features that have been built in to social networking apps have been specifically designed to exploit our brain chemistry. A lot of these copy aspects of casinos such as slot machines, where you pull a lever to see whether you will win a prize. This is the same idea as the pull-to-refresh element of social media apps, in which you drag the screen downwards to, hopefully, reload the screen with new posts. In psychology, this is called intermittent reinforcement: there might be something exciting there, or there might not, but this unpredictable reward strengthens our desire to continue.

A similar feature that also hacks into our neurochemistry is bottomless news feeds. Usually, when we reach the end of something, this is the moment when we consider doing something else. However, you can never reach the bottom of social media feeds because companies want to avoid anything that prompts users to do something active, like clicking to go to another page, so they remove any endpoints.

The reason features like these, along with notifications and like buttons, cause addiction is that they manipulate our brain chemicals, mainly, dopamine. When we do something positive, like eating, our brain releases dopamine as a way of recording what's worth repeating. However, our brains aren't able to notice which habits are beneficial, so it ends up creating negative habits too, a fact that some technology creators have actually expressed guilt about.

The best title for the text would be \_\_\_\_\_.

A A Modern Addiction

B Why Phones Experience Technical Problems

C How Brains Work

D Lazy Technology Creators

Submit

# *King Lear*

## Question

Do you think Gloucester should have questioned Edmund's story about Edgar more carefully? Why or why not?

Not answered

Submit

A handwritten signature in black ink, appearing to be 'Kw' with a flourish above it.

### Model Answer

Yes, Gloucester should have been more doubtful about Edmund's story. He believed Edmund's lies about Edgar without evidence, which showed his poor judgment and led to betrayal and family conflict.

## Question

How does the storm reflect King Lear's mental state?

Not answered

Submit

### Model Answer

The storm is a symbol of Lear's confusion and growing madness. The storm continues to get stronger, similar to Lear's emotional breakdown and the pain of betrayal and loss.

## Question

Why do you think the Fool stays loyal to King Lear even as Lear descends into madness?

Not answered

Submit

### Model Answer

The Fool is loyal to Lear because he really cares about him. Even though Lear is crazy, the Fool uses jokes to show Lear's mistakes. This shows that the Fool wants to help Lear through his hard times.

# Writing Skills

We are now going to work on answering the following exam question.

Write a 180-word essay about the following topic:

→ “Using the Internet”

## Question

Write a sentence to introduce the essay on this topic:

“Using the Internet” 

Answer

Submit

## Question

What is one pro (advantage) of using the internet?

Write two sentences. ←

Not answered

Submit

### Model Answer

One advantage of the internet is that it provides instant access to lots of information. Students can find resources on different websites that help them with their homework and research projects.

## Question

What is one con (disadvantage) of using the internet?

Write two sentences. ←

Answer

Another Problem is that

1. \_\_\_\_\_  
2. \_\_\_\_\_

Time wasting time is  
a disadvantage of using  
internet.

Submit

## Question

What is something you can do if you have access to the internet?

Write one sentence.

Not answered

Submit

### Model Answer

If I have access to the internet, I can download and use apps and software that help me learn English.

## Question

What do you think your life would be like without the internet?

Write one sentence.

Not answered

Submit

### Model Answer

If I didn't have internet, I wouldn't be able to use social media and follow my friends online.

## Question

Write a concluding sentence for this essay topic:

“Using the Internet”

Answer

Submit

Let's see a complete model answer for the question.

Write a 180-word essay about the following topic:

“Using the Internet”

The internet is a major part of our daily lives and we all need it and use it all the time. One advantage of the internet is that it provides instant access to lots of information. Students can find resources on different websites that help them with their homework and research projects.

When using the internet, we often receive unwanted advertising, including banner adverts, which are annoying. Moreover, some websites use cookies to track our online activities, and I worry about being the victim of a scam. If I have access to the internet, I can download and use apps and software that help me learn English. If I didn't have internet, I wouldn't be able to use social media and follow my friends online.

*To Conclude*  
In conclusion, the internet has lots of information for students, giving us access to so many useful resources. However, adverts and online scams are major disadvantages to using the internet and we should be careful to protect ourselves online. *Summarize*

شكرًا جزيلاً
