

Baxter-Sagart Old Chinese reconstruction, version 1.1 (20 September 2014)
William H. Baxter (白一平) and Laurent Sagart (沙加爾)
order: by Mandarin and Middle Chinese

The following table presents data for almost 5,000 items with Old Chinese reconstructions in the Baxter-Sagart system. Our reconstruction system and supporting arguments and evidence are presented in our book *Old Chinese: a new reconstruction* (New York: Oxford University Press, 2014). In this list, items are sorted in alphabetical order by pīnyīn romanization, and thereafter by Middle Chinese initial, final, and tone. The columns in the table are as follows:

zi	character (traditional form)
py	standard pronunciation in pīnyīn romanization
MC	ASCII-friendly Middle Chinese (MC) transcription. This is a minor modification of the notation used in Baxter (1992); for details see Baxter & Sagart (2014:9–20). For clarity, after each transcribed syllable we give the MC initial, final, and tone separately (with A, B, C, D for the traditional categories 平 píng, 上 shǎng, 去 qù, and 入 rù respectively): e.g. 處 chǔ, MC <i>tsyhoX</i> (<i>tsyh-</i> + <i>-jo</i> + <i>B</i>) ‘place’. Note that this notation is not intended as a reconstruction ; rather it is intended as a convenient representation of the information on pronunciation given in Middle Chinese sources such as the <i>Guāngyùn</i> 《廣韻》 and the <i>Jīngdiǎn shiwén</i> 《經典釋文》.
OC	Old Chinese reconstruction in the Baxter-Sagart system, sometimes with additional comments. If an element is in parentheses, this indicates that we cannot tell from present evidence whether it was there or not; it does not mean there is any positive evidence for its presence: thus the reconstruction *ŋ(r)aj for 宜 yí means that the Old Chinese form could have been either *ŋaj or *ŋraj; it does not mean we have any particular evidence to reconstruct the *-r-. If an element is in square brackets, it means we are uncertain about its identity: thus the reconstruction *pʳa[t]-s for 敗 bài ‘to defeat’ means that the syllable coda was either *-t or something else (in this case, *-p) which would have had the same Middle Chinese reflex as *-t. (For details see Baxter & Sagart 2014:7–8.) A hyphen “-” indicates a morpheme boundary. (We provisionally treat all cases of final *s as morphological suffixes.) Angle brackets around a prevocalic *r indicate that we consider it an infix, usually on the basis of related words without *r: for example, 塊 *[kʰ]ʳ<r>uj-s > <i>khweajH</i> > kuài ‘clod, lump’, also read 塊 *[kʰ]ʳuj-s > <i>khwojH</i> > kuài (same meaning); see Baxter & Sagart (2014:57–58). But the absence of angle brackets does not exclude the possibility that *r might be an infix. Similarly, a period “.” indicates a syllable boundary, but does not exclude the possibility that the syllable boundary might also have been a morpheme boundary. In an earlier release we also included a ‘user-friendly’ notation for our reconstructions in which parenthesized elements and square brackets were omitted, for a more compact and perhaps less confusing appearance. We have decided to discontinue this notation in favor of the present format, which more clearly indicates areas of uncertainty. Some users may wish to produce their own simplified version of the notation for some purposes, but for serious comparative and philological work the full notation should be used (see Baxter & Sagart 2014:379n7).
gloss	a simple gloss intended for identification only ; for accurate information about meanings and grammatical categories, one of the large standard dictionaries should be consulted.
GSR	the number (with leading zeroes) and letter of the item in Bernhard Karlgren’s <i>Grammata serica recensa</i> (GSR, 1957). Characters not included in GSR are assigned a number corresponding to their phonetic element, followed by a hyphen (e.g., 賭 dǔ ‘to wager’, 0045-, whose phonetic element is GSR 0045a); characters that cannot be assigned to any of the phonetics in GSR are assigned a code “0000-” (e.g., 笞 biān ‘whip’, 0000-) and placed at the beginning of the list. A character may be absent from GSR for several reasons: (1) Karlgren generally excluded characters that did not occur in pre-Qín texts (as far as he knew), although he included some characters from <i>Shuōwén jiězì</i> 《說文解字》. (2) He also excluded characters that did occur in pre-Qín documents but had no descendants in the later standard script. (3) He also seems to have excluded characters used only as place names.
HYDZD	the position of the character in <i>Hànyǔ dà zìdiǎn</i> 《漢語大字典》 (1986). This information comes from the Unihan database

	http://www.unicode.org/charts/unihan.html) and has not been independently checked..
rad	the number of the radical of the character (based on the 214 radicals of the Kāngxī zìdiǎn 《康熙字典》 ; also from the Unihan database)
str	the number of additional strokes in the character, apart from the radical (from the Unihan database)
Unicode	the hexadecimal code of the character in the UTF-16 encoding

Additional notes:

1. All data are in UTF-16 encoding (little-endian). The Times New Roman font is used except for the **zi** column, which uses SimSun (Founder Extended). Newer versions of Times New Roman include all the necessary phonetic symbols, but free Unicode-based phonetics fonts with all the necessary symbols can also be obtained from www.sil.org (e.g. Doulos IPA). For Chinese characters, the Hanazono fonts should also be adequate (<http://fonts.jp/hanazono>).

2. Not all characters or words included are actually attested in pre-Qín texts. We have explicitly indicated this in many cases, but probably not all. (Often they may be identified by their lack of a regular GSR number.) We have included them for historical interest, often because they occur as early Chinese loans into other languages, or are informative about the history of the Mǐn 閩 dialects. In such cases our reconstructions represent what we believe the Old Chinese pronunciation would have been if they existed in the Old Chinese period.

3. Mandarin pronunciations are based on modern dictionaries and often differ from what we would predict on the basis of Middle Chinese; the modern pronunciations are in many cases artificial, based on anachronistic interpretations of fǎnqiè 反切 spellings, reading characters according to their phonetic element, or other irregular processes. We have not marked such irregularities explicitly.
