

Nahr\_nahrsteins real name is matthew tyler fulton and he apparently lives in or near Waterville, Maine having formerly lived in Beaufort, North Carolina

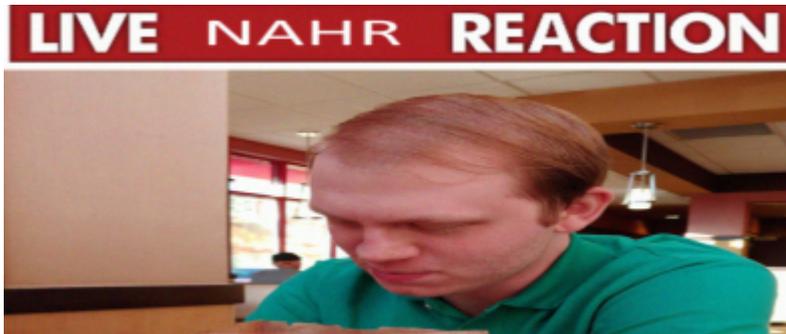

Image supposedly showing Nahrs face.

Nahr's Roblox profile (notice how one of his former usernames is "matt\_fu" and how he claims his name is "matt" in his bio)

Roblox is the Lego game that Lego could never have made, a platform for playing games entirely created by its own community. It was originally styled to fit that vision with a visual language of prefab bricks with studs and blocky minifigs for avatars. But over the past few years it's been shucking off that image; recently, makers got the ability to upload their own 3D meshes to their creations, and avatars are, bit by bit, getting more complex.

"Roblox is fairly powerful and I think a lot of people underestimate it," says Matthew Fulton, creator of [Tradelands](#), in which you craft, trade and battle pirates on the high seas. He first got into playing Roblox games in 2008, taking special interest in flight sims, but he was disappointed with the quality of the plane models, so he decided to make his own. Then he learned Lua, the programming language that Roblox uses. "Before I knew it I was making my own flight sims on Roblox. Roblox made learning Lua really easy since I could look at other peoples' code and learn by example. A strong, loyal community for my game supported the development of multiple iterations of my flight sim which helped me stick with Roblox for the next few years."

Another developer who started making games in Roblox is Nelson Sexton, who struck gold in 2013 with Deadzone, a [DayZ](#) clone. He attempted to make a sequel but found Roblox struggling to support his vision, so he decided to make it in Unity, releasing it as [Turned](#), which is one of the most-played games on Steam ([I wrote about it a while back here](#)). "Roblox is still very limited in comparison to making your own game in an engine like Unity or Unreal, but they make it a lot easier and provide all the infrastructure," he says. "It seems to have advanced a lot towards being more fully featured like one of those game engines."

By infrastructure, he principally means multiplayer server hosting, which is the beating heart of Roblox. It finds lobbies and matches players up quickly and seamlessly for any game, whether polished or scrappy. Mind you, the breadth and scale of what Roblox is achieving with its multiplayer means that it's entirely common to face game-breaking
